IES3110 Series Switches CLI Reference Guide

Models: IES3110-8TF; IES3110-8TF-P; IES3110-16TF; IES3110-24TF

CLI REFERENCE GUIDE

Contents

Chapter 1 COMMAND LINE INTERFACE

1.1 Accessing the CLI

When accessing the management interface for the switch over a direct connection to the server's console port, or via a Telnet connection, the switch can be managed by entering command keywords and parameters at the prompt. Using the switch's command-line interface (CLI) is very similar to entering commands on a UNIX system.

This chapter describes how to use the Command Line Interface (CLI).

1.2 Command Line Modes

The CLI groups all the commands in appropriate modes according to the nature of the command. A sample of the CLI command modes is described below. Each of the command modes supports specific software commands.

Mode-based Command Hierarchy

The Command Line Interface (CLI) groups all the commands in appropriate modes by the nature of the commands. Examples of the CLI command modes are described below. Each of the command modes supports specific switch's commands. The CLI Command Modes table captures the command modes, the prompts visible in that mode and the exit method from that mode.

Command Mode	Access Method	Prompt	Exit or Access Previous Mode
User Mode	This is the first level of access. Perform basic tasks and list system information.	COMMAND>	Enter Logout command
Privileged Mode	From the User Mode, enter the enable command.	Switch#	To exit to the User Mode, enter exit or logout.
Global Config Mode	From the Privileged Mode, enter the configuration command.	Switch (Config)#	To exit to the Privileged Mode, enter the exit command.
Interface Config Mode	From the Global Config mode, enter the interface <port#> command.	Switch (Interface <port#>)#	To exit to the Global Config mode, enter exit.

Table 1-1 CLI Command Modes

The CLI is divided into various modes. The commands in one mode are not available until the operator switches to that particular mode. The commands available to the operator at any point in time depend upon the mode. Entering a question mark (?) at the CLI prompt will display a list of the available commands and descriptions of the commands.

The CLI provides the following modes:

- User Mode

When the operator logs into the CLI, the User Mode is the initial mode. The User Mode contains a limited set of commands. The command

prompt shown at this level is:

Command Prompt: switch>

- Privileged Mode

To have access to the full suite of commands, the operator must enter the Privileged Mode. The Privileged Mode requires password authentication. From Privileged Mode, the operator can issue any Exec command to enter the Global Configuration mode. The command prompt shown at this level is:

Command Prompt: switch#

- Global Config Mode

This mode permits the operator to make modifications to the running configuration. General setup commands are grouped in this mode. From the Global Configuration mode, the operator can enter the Interface Configuration mode. The command prompt at this level is:

Command Prompt: switch (Config)#

From the Global Config mode, the operator may enter the following configuration modes:

- Interface Config Mode

Many features are enabled for a particular interface. The Interface commands enable or modify the operation of an interface. In this mode, a physical port is set up for a specific logical connection operation. The command prompt at this level is:

Command Prompt: Switch(Interface <port#>)#

1.3 Requirements

- **Workstations** running Windows XP/Vista/7/8/, Windows 2003/2008, MAC OS X or later, Linux, UNIX, or other platforms are compatible with TCP/IP protocols.
- Workstations are installed with Ethernet NIC (Network Interface Card)
- **Serial** Port Connection (Terminal)
  - The above Workstations come with COM Port (DB9) or USB-to-RS-232 converter.
  - The above Workstations have been installed with terminal emulator, such as Hyper Terminal included in Windows XP/2003.
  - Serial cable -- one end is attached to the RS-232 serial port, while the other end to the console port of the Industrial Managed Switch.
- Ethernet Port Connection
  - Network cables -- Use standard network (UTP) cables with RJ45 connectors.
  - The above PC is installed with Web browser and JAVA runtime environment plug-in.

Chapter 2 CONSOLE CLI MANAGEMENT

2.1 Terminal Setup

To configure the system, connect a serial cable to a COM port on a PC or notebook computer and to RJ45 type of serial (console) port of the Industrial Managed Switch.

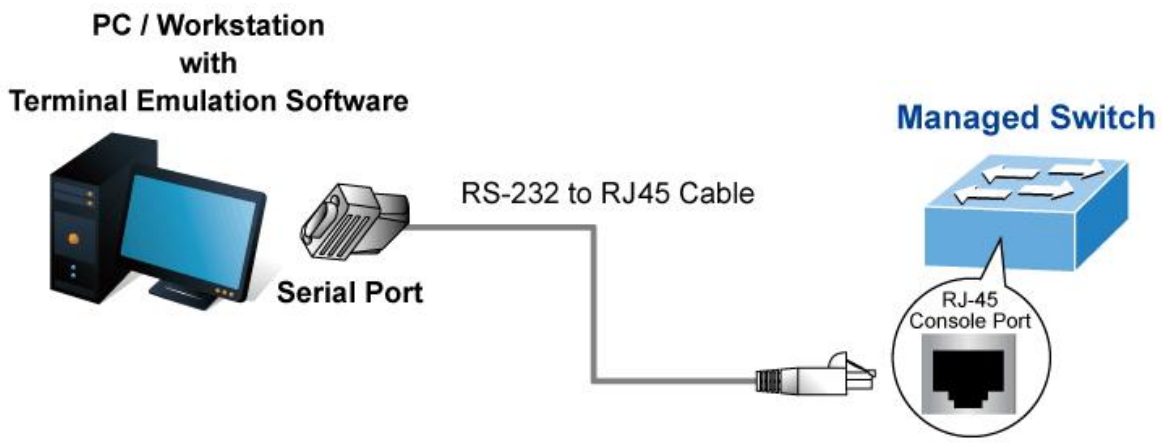

Figure 2-1 Industrial Managed Switch Console Connectivity

The console port of the Industrial Managed Switch is an RJ45 type, RS-232 serial port connector. It is an interface for connecting a terminal directly. Through the console port, it provides rich diagnostic information including IP address setting, factory reset, port management, link status and system setting. Users can use the attached RS-232 cable in the package and connect to the console port on the device. After the connection, users can run any terminal emulation program (Hyper Terminal, ProComm Plus, Telix, Winterm and so on) to enter the startup screen of the device.

A terminal program is required to make the software connection to the Industrial Managed Switch. Windows' **Hyper Terminal** program may be a good choice. The Hyper Terminal can be accessed from the **Start** menu.

Click **START**, then **Programs** and **Accessories**, and then **Hyper Terminal**.

When the following screen appears, make sure that the COM port should be configured as:

- **Baud : 115200**
- **Data bits : 8**
- **Parity : None**
- **Stop bits : 1**
- **Flow control : None**

Figure 2-3 Hyper Terminal COM Port Configuration

You can change these settings, if desired, after you log on. This management method is often preferred because you can remain connected and monitor the system during system reboots. Also, certain error messages are sent to the serial port, regardless of the interface through which the associated action was initiated. A Macintosh or PC attachment can use any terminal-emulation program for connecting to the terminal serial port. A workstation attachment under UNIX can use an emulator such as TIP.

2.2 Logon to the Console

Once the terminal is connected to the device, power on the Industrial Managed Switch, and the terminal will display "running testing procedures". Then, the following message asks to log-in user name and password. The factory default user name and password are shown as follows and the login screen in Figure 3-1 appears.

Username: **admin**

Password: **admin**

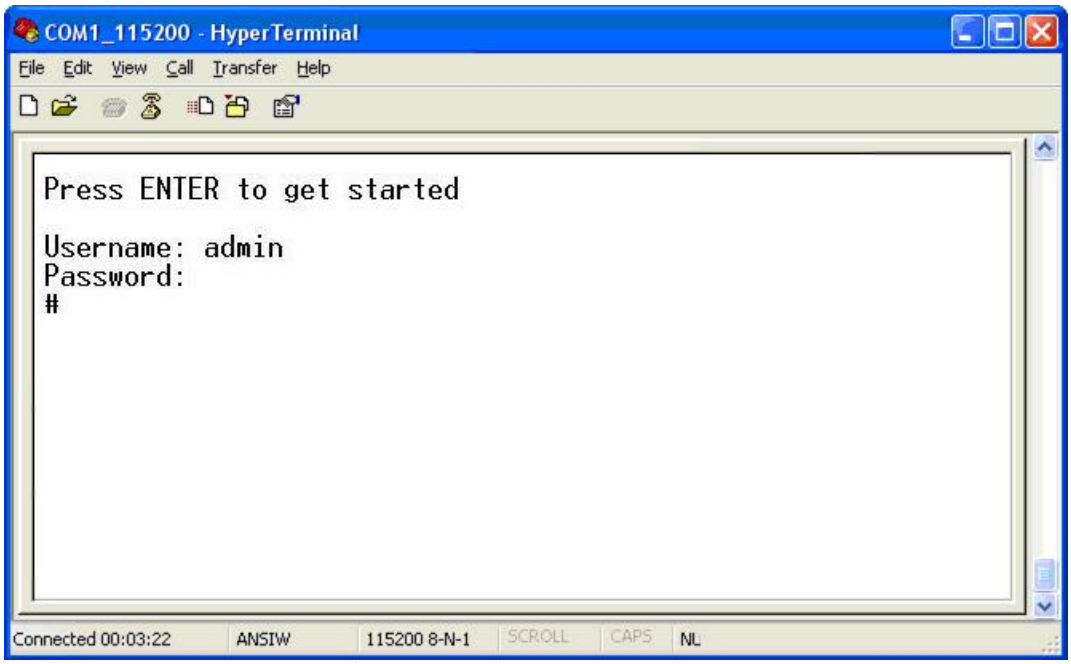

Figure 3-1: Industrial Managed Switch Console Login Screen

The user can now enter commands to manage the Industrial Managed Switch. For a detailed description of the commands, please refer to the following chapters.

Note

For security reason, please change and memorize the new password after this first setup.

Only accept command in lowercase letter under console interface.

2.3 Configuring IP Address

The Industrial Managed Switch is shipped with default IP address shown below.

IP Address: 192.168.1.1

Subnet Mask: 255.255.255.0

To check the current IP address or modify a new IP address for the Switch, please use the procedures as follows:

- **Show the current IP Address**

  1．At the "#" prompt, enter "show ip interface brief".

- **Configuring IP Address**

  2．At the "#" prompt, enter the following command and press <Enter> as shown in Figure 3-2.

```
# configure terminal
(config)# interface vlan 1
(config-if-vlan)# ip address 192.168.1.100 255.255.255.0
```

The previous command would apply the following settings for the Industrial Managed Switch.

IP Address: **192.168.1.100**

Subnet Mask: **255.255.255.0**

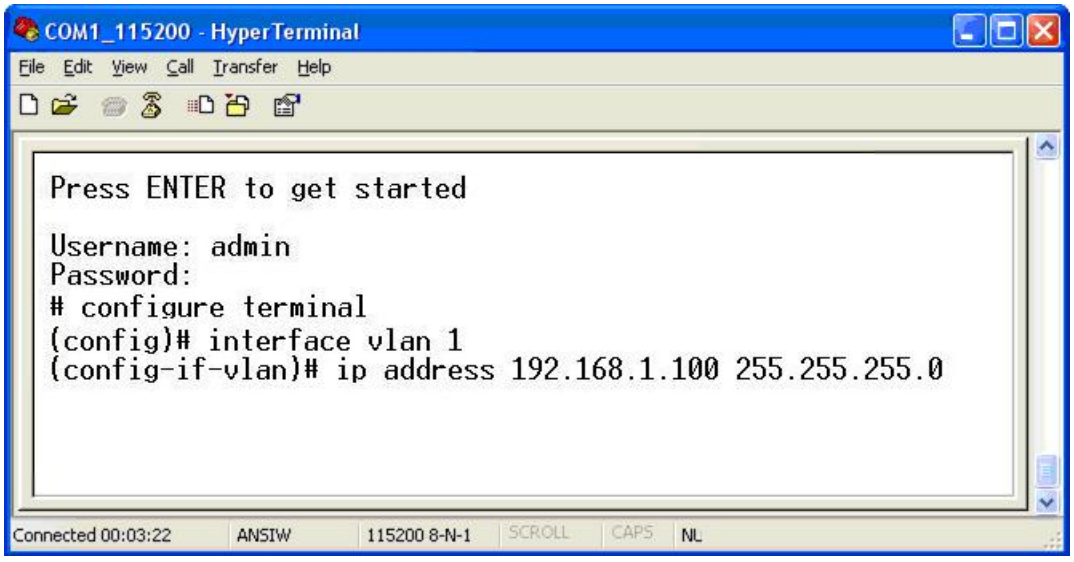

Figure 3-2: Configuring IP Address Screen

1．Repeat step 1 to check if the IP address has changed.

- **Storing current switch configuration**

  2．At the "#" prompt, enter the following command and press <Enter>.

```
# copy running-config startup-config
```

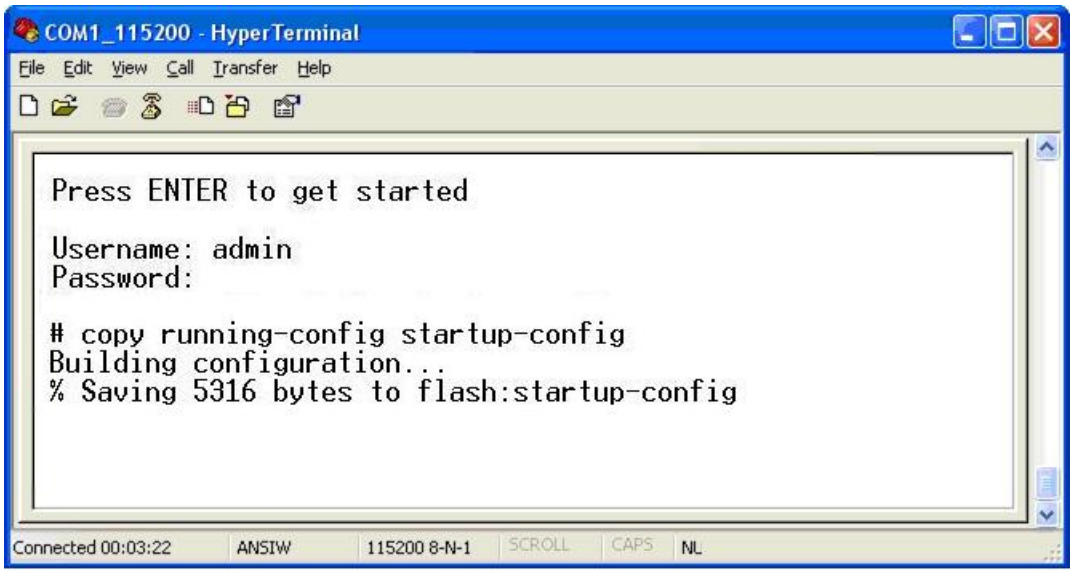

Figure 3-3: Saving Current Configuration Command Screen

If the IP is successfully configured, the Industrial Managed Switch will apply the new IP address setting immediately. You can access the Web interface of the Industrial Managed Switch through the new IP address.

Note

If you are not familiar with the console command or the related parameter, enter " ?" anytime in console to get the help description.

Chapter 3 TELNET CLI MANAGEMENT

3.1 Telnet Login

The Industrial Managed Switch also supports telnet for remote management. The switch asks for user name and password for remote login when using telnet; please use "**admin**" for both username and password.

Default IP address: **192.168.1.100**

Username: **admin**

Password: **admin**

Chapter 4 Commands for CLI Configuration

4.1 clear

4.1.1 clear access management statistics

Command:

clear access management statistics

Default:

N/A

Usage Guide:

To clear the **access management statistics**.

Example:

To clear the Switch's **access management statistics**.

Switch# **clear access management statistics**

4.1.2 clear access-list ace statistics

Command:

clear access-list ace statistics

Default:

N/A

Usage Guide:

To clear the **Access list entry statistics.**

Example:

To clear the Switch's **Access list entry statistics.**

Switch# **clear access-list ace statistics**

4.1.3 clear dot1x statistics interface

Command:

clear dot1x statistics interface GigabitEthernet | 10GigabitEthernet

Default:

N/A

Usage Guide:

To clear the **dot1x statistics.**

Example:

To clear the Switch's **GigabitEthernet 1/25 dot1x statistics.**

Switch# **clear dot1x statistics interface GigabitEthernet 1/25**

4.1.4 clear eps

Command:

clear eps <Inst : uint>

<Inst : uint> The EPS instance number.

Default:

N/A

Usage Guide:

To clear the **EPS instance number.**

4.1.5 clear erps

Command:

clear erps < ERPS group numbers > statistics

Default:

N/A

Usage Guide:

To clear the **ERPS group numbers statistics.**

Example:

To clear the Switch's **ERPS group 1 statistics.**

```
Switch# # clear erps 1 statistics
```

4.1.6 clear erps statistics

Command:

```
clear erps statistics
```

Default:

N/A

Usage Guide:

To clear the **ERPS statistics.**

Example:

To clear the Switch's **ERPS statistics.**

```
Switch# clear erps statistics
```

4.1.7 clear evc statistics

Command:

```
clear evc statistics
```

Default:

N/A

Usage Guide:

To clear the **Ethernet Virtual Connections statistics.**

Example:

To clear the Switch's **Ethernet Virtual Connections statistics.**

```
Switch# clear evc statistics
```

4.1.8 clear ip arp

Command:

clear ip arp

Default:

N/A

Usage Guide:

To clear the **ARP cache.**

Example:

To clear the Switch's **ARP cache.**

Switch# **clear ip arp**

4.1.9 clear ip dhcp detailed statistics all

Command:

clear ip dhcp detailed statistics all

Default:

N/A

Usage Guide:

To clear the **DHCP detailed statistics** for all.

Example:

To clear the Switch's **DHCP detailed statistics** for all.

Switch# **clear ip dhcp detailed statistics all**

4.1.10 clear ip dhcp detailed statistics client

Command:

clear ip dhcp detailed statistics client

Default:

N/A

Usage Guide:

To clear the **DHCP client statistics.**

Example:

To clear the Switch's **DHCP client statistics.**

```
Switch# clear ip dhcp detailed statistics client
```

4.1.11 clear ip dhcp detailed statistics helper

Command:

```
clear ip dhcp detailed statistics helper
```

Default:

N/A

Usage Guide:

To clear the **DHCP normal L2 or L3 forward statistics.**

Example:

To clear the Switch's **DHCP normal L2 or L3 forward statistics.**

```
Switch# clear ip dhcp detailed statistics helper
```

4.1.12 clear ip dhcp detailed statistics server

Command:

```
clear ip dhcp detailed statistics server
```

Default:

N/A

Usage Guide:

To clear the **DHCP server statistics.**

Example:

To clear the Switch's **DHCP server statistics.**

```
Switch# clear ip dhcp detailed statistics server
```

4.1.13 clear ip dhcp detailed statistics snooping

Command:

clear ip dhcp detailed statistics snooping

Default:

N/A

Usage Guide:

To clear the **DHCP snooping statistics.**

Example:

To clear the Switch's **DHCP normal L2 or L3 forward statistics.**

Switch# **clear ip dhcp detailed statistics snooping**

4.1.14 clear ip dhcp relay statistics

Command:

clear ip dhcp relay statistics

Default:

N/A

Usage Guide:

To clear the **DHCP relay statistics.**

Example:

To clear the Switch's **DHCP relay statistics.**

Switch# **clear ip dhcp relay statistics**

4.1.15 clear ip dhcp server binding

Command:

clear ip dhcp server binding <IP>

<IP> A.B.C.D

Default:

N/A

Usage Guide:

To clear the **DHCP server binding cache.**

Example:

To clear the Switch's **DHCP server(192.168.0.100) binding cache.**

Switch# **clear ip dhcp server binding 192.168.0.100**

4.1.16 clear ip dhcp server binding automatic

Command:

clear ip dhcp server binding automatic

Default:

N/A

Usage Guide:

To clear the **DHCP automatic bindings cache.**

Example:

To clear the Switch's **DHCP automatic bindings cache.**

Switch# **clear ip dhcp server binding automatic**

4.1.17 clear ip dhcp server binding expired

Command:

clear ip dhcp server binding expired

Default:

N/A

Usage Guide:

To clear the **DHCP expired bindings for free.**

Example:

To clear the Switch's **DHCP expired bindings for free.**

Switch# **clear ip dhcp server binding expired**

4.1.18 clear ip dhcp server binding manual

Command:

clear ip dhcp server binding manual

Default:

N/A

Usage Guide:

To clear the **DHCP server manual binding cache.**

Example:

To clear the Switch's **DHCP server manual binding cache.**

Switch# **clear ip dhcp server binding manual**

4.1.19 clear ip igmp snooping statistics

Command:

clear ip igmp snooping statistics

Default:

N/A

Usage Guide:

To clear the I**GMP snooping statistics.**

Example:

To clear the Switch's **IGMP snooping statistics.**

Switch# **clear ip igmp snooping statistics**

4.1.20 clear ip igmp snooping vlan

Command:

clear ip igmp snooping vlan < vlan_list> statistics

<vlan_list> VLAN identifier(s): VID

Default:

N/A

Usage Guide:

To clear the **IGMP snooping vlan < vlan_list> statistics.**

Example:

To clear the Switch's **IGMP snooping vlan 1 statistics.**

```
Switch# clear ip igmp snooping vlan 1 statistics
```

4.1.21 clear ip statistics icmp icmp-msg

Command:

```
clear ip statistics icmp icmp-msg <Type : 0~255>
```

<Type : 0~255> **ICMP message type ranges** from 0 to 255

Default:

N/A

Usage Guide:

To clear the **IPv4 ICMP traffic for designated message type.**

Example:

To clear the Switch's **IPv4 ICMP traffic for designated message type 0.**

```
Switch# clear ip statistics icmp icmp-msg 0
```

4.1.22 clear ip statistics icmp interface vlan

Command:

```
clear ip statistics icmp interface vlan <vlan_list>
```

<vlan_list> VLAN identifier(s): VID

Default:

N/A

Usage Guide:

To clear the **IPv4 interface/ICMP statistics** for specific VLAN.

Example:

To clear the Switch's **IP interface/ICMP statistics** for specific VLAN 1.

Switch# **clear ip statistics icmp interface vlan 1**

4.1.23 clear ip statistics system icmp icmp-msg

Command:

clear ip statistics system icmp icmp-msg <Type : 0~255>

<Type : 0~255> ICMP message type ranges from 0 to 255

Default:

N/A

Usage Guide:

To clear the **IPv4 ICMP statistics** for specific **ICMP message type.**

Example:

To clear the Switch's **IPv4 ICMP statistics** for specific **ICMP message type** 0.

Switch# **clear ip statistics system icmp icmp-msg 0**

4.1.24 clear ip statistics system icmp interface vlan

Command:

clear ip statistics system icmp interface vlan

<vlan_list> VLAN identifier(s): VID

Default:

N/A

Usage Guide:

To clear the **IPv4 ICMP interface statistics** for specific VLAN.

Example:

To clear the Switch's **IPv4 ICMP interface statistics** for specific VLAN 1.

Switch# **clear ip statistics system icmp interface vlan 1**

4.1.25 clear ipv6 mld snooping statistics

Command:

clear ipv6 mld snooping statistics

Default:

N/A

Usage Guide:

To clear the **ipv6 mld snooping statistics.**

Example:

To clear the Switch's **ipv6 mld snooping statistics.**

Switch# **clear ipv6 mld snooping statistics**

4.1.26 clear ipv6 mld snooping vlan

Command:

clear ipv6 mld snooping vlan <vlan_list> statistics

<vlan_list> VLAN identifier(s): VID

Default:

N/A

Usage Guide:

To clear the **ipv6 mld snooping statistics** for specific VLAN.

Example:

To clear the Switch's **ipv6 mld snooping statistics** for specific VLAN 1.

Switch# clear ipv6 mld snooping vlan 1 statistics

4.1.27 clear ipv6 neighbors

Command:

clear ipv6 neighbors

Default:

N/A

Usage Guide:

To clear the **ipv6 neighbors.**

Example:

To clear the Switch's **ipv6 neighbors.**

```
Switch# clear ipv6 neighbors
```

4.1.28 clear ipv6 statistics icmp icmp-msg

Command:

```
clear ipv6 statistics icmp icmp-msg <Type : 0~255>
```

<Type : 0~255> ICMP message type ranges from 0 to 255

Default:

N/A

Usage Guide:

To clear the **IPv6 ICMP traffic for designated message type.**

Example:

To clear the Switch's **IPv6 ICMP traffic for designated message type 0.**

```
Switch# clear ipv6 statistics icmp icmp-msg 0
```

4.1.29 clear ipv6 statistics icmp interface vlan

Command:

```
clear ipv6 statistics icmp interface vlan <vlan_list>
```

<vlan_list> VLAN identifier(s): VID

Default:

N/A

Usage Guide:

To clear the **IPv6 interface/ICMP statistics** for specific VLAN.

Example:

To clear the Switch's **IPv6 interface/ICMP statistics** for specific VLAN 1.

Switch# **clear ipv6 statistics icmp interface vlan 1**

4.1.30 clear ipv6 statistics system icmp icmp-msg

Command:

clear ipv6 statistics system icmp icmp-msg <Type : 0~255>

<Type : 0~255> ICMP message type ranges from 0 to 255

Default:

N/A

Usage Guide:

To clear the **IPv6 ICMP statistics** for **specific ICMP message type.**

Example:

To clear the Switch's **IPv6 ICMP statistics** for **specific ICMP message type** 0**.**

Switch# **clear ipv6 statistics system icmp icmp-msg 0**

4.1.31 clear ipv6 statistics system icmp interface vlan

Command:

clear ipv6 statistics system icmp interface vlan

<vlan_list> VLAN identifier(s): VID

Default:

N/A

Usage Guide:

To clear the **IPv6 ICMP interface statistics** for specific VLAN.

Example:

To clear the Switch's **IPv6 ICMP interface statistics** for specific VLAN 1.

Switch# **clear ipv6 statistics system icmp interface vlan 1**

4.1.32 clear lacp statistics

Command:

clear lacp statistics

Default:

N/A

Usage Guide:

To clear the **lacp statistics.**

Example:

To clear the Switch's **lacp statistics.**

Switch# **clear lacp statistics**

4.1.33 clear lldp statistics

Command:

clear lldp statistics

Default:

N/A

Usage Guide:

To clear the **lldp statistics.**

Example:

To clear the Switch's **lldp statistics.**

Switch# **clear lldp statistics**

4.1.34 clear logging error info

Command:

clear logging error info

Default:

N/A

Usage Guide:

To clear the **logging error info.**

Example:

To clear the Switch's **logging error info.**

```
Switch# clear logging error info
```

4.1.35 clear logging error warning

Command:

```
clear logging error warning
```

Default:

N/A

Usage Guide:

To clear the **logging error warning.**

Example:

To clear the Switch's **logging error warning.**

```
Switch# clear logging error warning
```

4.1.36 clear logging info error

Command:

```
clear logging info error
```

Default:

N/A

Usage Guide:

To clear the **logging info error.**

Example:

To clear the Switch's **logging info error.**

```
Switch# clear logging info error
```

4.1.37 clear logging info warning

Command:

clear logging info warning

Default:

N/A

Usage Guide:

To clear the **logging info warning.**

Example:

To clear the Switch's **logging info warning.**

Switch# **clear logging info warning**

4.1.38 clear logging warning error

Command:

clear logging warning error

Default:

N/A

Usage Guide:

To clear the **logging warning error.**

Example:

To clear the Switch's **logging warning error.**

Switch# **clear logging warning error**

4.1.39 clear logging warning info

Command:

clear logging warning info

Default:

N/A

Usage Guide:

To clear the **logging warning info.**

Example:

To clear the Switch's **logging warning info.**

```
Switch# clear logging warning info
```

4.1.40 clear mac address-table

Command:

```
clear mac address-table
```

Default:

N/A

Usage Guide:

To clear the **mac address-table.**

Example:

To clear the Switch's **mac address-table.**

```
Switch# clear mac address-table
```

4.1.41 clear mep

Command:

```
clear mep <Inst : uint>
```

<Inst : uint> The MEP instance.

Default:

N/A

Usage Guide:

To clear the **MEP instance profiles.**

4.1.42 clear mvr name

Command:

clear mvr name <MvrName : word16>

<MvrName : word16> MVR multicast VLAN name

Default:

N/A

Usage Guide:

To clear the **mvr name profiles.**

4.1.43 clear mvr statistics

Command:

clear mvr statistics

Default:

N/A

Usage Guide:

To clear the **mvr statistics.**

Example:

To clear the Switch's **mvr statistics.**

Switch# **clear mvr statistics**

4.1.44 clear mvr vlan

Command:

clear mvr vlan <vlan_list> statistics

<vlan_list> MVR multicast VLAN list

Default:

N/A

Usage Guide:

To clear the **mvr vlan statistics** for specific VLAN.

Example:

To clear the Switch's **mvr vlan statistics** for specific VLAN 1.

Switch# **clear mvr vlan 1 statistics**

4.1.45 clear network-clock clk-source

Command:

clear network-clock clk-source <clk-source : 1-2>

<clk-source : 1-2> Clock source number

Default:

N/A

Usage Guide:

To clear the **ERPS WTR timer** for a specific profile.

Example:

To clear the Switch's **ERPS WTR timer** for a specific profile 1.

Switch# **clear network-clock clk-source 1**

4.1.46 clear spanning-tree detected-protocols interface *

Command:

clear spanning-tree detected-protocols interface *

Default:

N/A

Usage Guide:

To clear the **spanning-tree detected-protocols** for all.

Example:

To clear the Switch's **spanning-tree detected-protocols** for all.

Switch# **clear spanning-tree detected-protocols interface ***

4.1.47 clear spanning-tree detected-protocols interface *

Command:

clear spanning-tree detected-protocols interface *

Default:

N/A

Usage Guide:

To clear the **spanning-tree detected-protocols** for all.

Example:

To clear the Switch's **spanning-tree detected-protocols** for all.

```
Switch# clear spanning-tree detected-protocols interface *
```

4.1.48 clear spanning-tree detected-protocols interface GigabitEthernet

Command:

```
clear spanning-tree detected-protocols interface GigabitEthernet <PORT_LIST>
```

<PORT_LIST> Port list in X/X-XX

Default:

N/A

Usage Guide:

To clear the **spanning-tree detected-protocols** for specific **GigabitEthernet port.**

Example:

To clear the Switch's **spanning-tree detected-protocols** for specific **GigabitEthernet 1/1.**

```
Switch# clear spanning-tree detected-protocols interface GigabitEthernet 1/1
```

4.1.49 clear spanning-tree detected-protocols interface 10GigabitEthernet

Command:

```
clear spanning-tree detected-protocols interface 10GigabitEthernet <PORT_LIST>
```

<PORT_LIST> Port list in X/X-XX

Default:

N/A

Usage Guide:

To clear the **spanning-tree detected-protocols** for specific **10GigabitEthernet port.**

Example:

To clear the Switch's **spanning-tree detected-protocols** for specific **10GigabitEthernet 1/1.**

```
Switch# clear spanning-tree detected-protocols interface 10GigabitEthernet 1/1
```

4.1.50 clear spanning-tree statistics interface *

Command:

```
clear spanning-tree statistics interface *
```

Default:

N/A

Usage Guide:

To clear the **spanning-tree statistics** for all.

Example:

To clear the Switch's **spanning-tree statistics** for all.

```
Switch# clear spanning-tree statistics interface *
```

4.1.51 clear spanning-tree statistics interface GigabitEthernet

Command:

```
clear spanning-tree statistics interface GigabitEthernet <PORT_LIST>
```

<PORT_LIST> Port list in X/X-XX

Default:

N/A

Usage Guide:

To clear the **spanning-tree statistics** for specific **GigabitEthernet port.**

Example:

To clear the Switch's **spanning-tree statistics** for specific **GigabitEthernet 1/1.**

```
Switch# clear spanning-tree statistics interface GigabitEthernet 1/1
```

4.1.52 clear spanning-tree statistics interface 10GigabitEthernet

Command:

clear spanning-tree statistics interface 10GigabitEthernet <PORT_LIST>

<PORT_LIST> Port list in X/X-XX

Default:

N/A

Usage Guide:

To clear the **spanning-tree statistics** for specific **10GigabitEthernet port.**

Example:

To clear the Switch's **spanning-tree statistics** for specific **10GigabitEthernet 1/1.**

Switch# **clear spanning-tree statistics interface 10GigabitEthernet 1/1**

4.1.53 clear statistics *

Command:

clear statistics *

Default:

N/A

Usage Guide:

To clear the **statistics** for all.

Example:

To clear the Switch's **statistics** for all.

Switch# c**lear statistics ***

4.1.54 clear statistics GigabitEthernet

Command:

clear statistics GigabitEthernet <PORT_LIST>

<PORT_LIST> Port list in X/X-XX

Default:

N/A

Usage Guide:

To clear the **statistics** for specific **GigabitEthernet port.**

Example:

To clear the Switch's **statistics** for specific **GigabitEthernet 1/1.**

```
Switch# clear statistics GigabitEthernet 1/1
```

4.1.55 clear statistics 10GigabitEthernet

Command:

```
clear statistics 10GigabitEthernet <PORT_LIST>
```

<PORT_LIST> Port list in X/X-XX

Default:

N/A

Usage Guide:

To clear the **statistics** for specific **10GigabitEthernet port.**

Example:

To clear the Switch's **statistics** for specific **10GigabitEthernet 1/1.**

```
Switch# clear statistics 10GigabitEthernet 1/1
```

4.2 configure terminal

4.2.1 aaa authentication login console local

Command:

```
aaa authentication login console local
```

Default:

console : local

Usage Guide:

To authenticate the **local** account via **console** only.

Example:

To authenticate the **local** account via **console.**

```
Switch# configure terminal
Switch (config)# aaa authentication login console local
```

4.2.2 aaa authentication login console radius

Command:

```
aaa authentication login console radius
```

Default:

console : local

Usage Guide:

To authenticate the **radius** account via **console** only.

Example:

To authenticate the **local** and **radius** account via **console**.

```
Switch# configure terminal
Switch (config)# aaa authentication login console local radius
```

4.2.3 aaa authentication login console tacacs

Command:

```
aaa authentication login console tacacs
```

Default:

console : local

Usage Guide:

To authenticate the **tacacs** account via **console** only.

Example:

To authenticate the **local** and **radius** and **tacacs** account via **console**.

```
Switch# configure terminal
Switch (config)# aaa authentication login console local radius tacacs
```

4.2.4 aaa authentication login http local

Command:

aaa authentication login http local

Default:

http : local

Usage Guide:

To authenticate the **local** account via **http** only.

Example:

To authenticate the **local** account via **http**.

Switch# configure terminal

Switch (config)# **aaa authentication login http local**

4.2.5 aaa authentication login http radius

Command:

aaa authentication login http radius

Default:

http : local

Usage Guide:

To authenticate the **radius** account via **http** only.

Example:

To authenticate the **local** and **radius** account via **http**.

Switch# configure terminal

Switch (config)# **aaa authentication login http local radius**

4.2.6 aaa authentication login http tacacs

Command:

aaa authentication login http tacacs

Default:

http : local

Usage Guide:

To authenticate the **tacacs** account via **http** only.

Example:

To authenticate the **local** and **radius** and **tacacs** account via **http**.

```
Switch# configure terminal
Switch (config)# aaa authentication login http local radius tacacs
```

4.2.7 aaa authentication login ssh local

Command:

```
aaa authentication login ssh local
```

Default:

ssh : local

Usage Guide:

To authenticate the **local** account via **ssh** only.

Example:

To authenticate the **local** account via **ssh**.

```
Switch# configure terminal
Switch (config)# aaa authentication login ssh local
```

4.2.8 aaa authentication login ssh radius

Command:

```
aaa authentication login ssh radius
```

Default:

ssh : local

Usage Guide:

To authenticate the **radius** account via **ssh** only.

Example:

To authenticate the **local** and **radius** account via **ssh.**

```
Switch# configure terminal
```

Switch (config)# **aaa authentication login ssh local radius**

4.2.9 aaa authentication login ssh tacacs

Command:

aaa authentication login ssh tacacs

Default:

ssh : local

Usage Guide:

To authenticate the **tacacs** account via **ssh** only.

Example:

To authenticate the **local** and **radius** and **tacacs** account via **console**.

Switch# configure terminal

Switch (config)# **aaa authentication login ssh local radius tacacs**

4.2.10 aaa authentication login telnet local

Command:

aaa authentication login telnet local

Default:

telnet : local

Usage Guide:

To authenticate the **local** account via **telnet** only.

Example:

To authenticate the **local** account via **telnet**.

Switch# configure terminal

Switch (config)# **aaa authentication login telnet local**

4.2.11 aaa authentication login telnet radius

Command:

aaa authentication login telnet radius

Default:

telnet : local

Usage Guide:

To authenticate the **radius** account via **telnet** only.

Example:

To authenticate the **local** and **radius** account via **telnet**.

Switch# configure terminal

Switch (config)# **aaa authentication login telnet local radius**

4.2.12 aaa authentication login telnet tacacs

Command:

aaa authentication login telnet tacacs

Default:

telnet : local

Usage Guide:

To authenticate the **tacacs** account via **telnet** only.

Example:

To authenticate the **local** and **radius** and **tacacs** account via **telnet**.

Switch# configure terminal

Switch (config)# **aaa authentication login telnet local radius tacacs**

4.2.13 access management

Command:

access management <AccessId : 1-16> <AccessVid : 1-4095> <AddrRangeStart : ipv4_addr | ipv6_addr> all | snmp | telnet | to | Web

<AccessId : 1-16> ID of access management entry

<AccessVid : 1-4095> The VLAN ID for the access management entry

<AddrRangeStart : ipv4_addr> Start IPv4 address

<AddrRangeStart : ipv6_addr> Start IPv6 address

all All services

snmp SNMP service

telnet TELNET/SSH service

to End address of the range

web Web service

Default:

access management : disable

Usage Guide:

To enable the **access management** profile to allow SNMP / Telnet / HTTP services.

Example:

To create a Profile 1 enabling all services for VLAN 1 (IPv6 address 2001::7788) .

```
Switch# configure terminal
Switch (config)# access management 1 1 2001::7788 all
```

4.2.14 access-list ace

Command:

```
access-list ace <AceId : 1-512> action {deny, permit} | dmac-type {any, broadcast, multicast, unicast} | frametype {any, arp, etype, ipv4, ipv4-icmp, ipv4-tcp, ipv4-udp, ipv6, ipv6-icmp, ipv6-tcp, ipv6-udp} | ingress {any, interface 10GigabitEthernet | GigabitEthernet <PORT_ID>} | logging {disable, next, policy, rate-limiter, shutdown, tag-priority, vid} | next {<AceId : 1-512>, last}| policy <PolicyId : 0-255> | rate-limiter {<RateLimiterId : 1-16>, disable} | redirect {disable, interface 10GigabitEthernet | GigabitEthernet <PORT_ID>} | tag-priority {0-1, 0-3, 2-3, 4-5, 4-7, 6-7, <TagPriority : 0-7>, any} | vid {<Vid : 1-4095>, any}
```

<AceId : 1-512> ACE ID

action Access list action

dmac-type The type of destination MAC address

frametype Frame type

ingress Ingress

logging Logging frame information. Note: The logging feature only works when the packet length is less than 1518 (without VLAN tags) and the System Log memory size and logging rate are limited.

next Insert the current ACE before the next ACE ID

policy	Policy
rate-limiter	Rate limiter
redirect	Redirect frame to specific port
shutdown	Shutdown incoming port. The shutdown feature only works when the packet length is less than 1518 (without VLAN tags).
tag-priority	Tag priority
vid	VID field

Default:

N/A

Usage Guide:

To create and set up a profile for the **access list.**

Example:

To set a Profile 1 up (**action: permit, dmac-type: unicast, frametype: ipv4-icmp, ingress: any, logging: disable, policy: 1, rate-limiter: 1, tag-priority: 1. vid: 1).**

```
Switch# configure terminal
Switch (config)# access-list ace 1 action permit dmac-type unicast frametype ipv4-icmp ingress any logging disable policy 1 rate-limiter 1 tag-priority 1 vid 1
```

4.2.15 access-list ace update

Command:

```
access-list ace update <AceId : 1-512> action {deny, permit} | dmac-type {any, broadcast, multicast, unicast} | frametype {any, arp, etype, ipv4, ipv4-icmp, ipv4-tcp, ipv4-udp, ipv6, ipv6-icmp, ipv6-tcp, ipv6-udp} | ingress {any, interface 10GigabitEthernet | GigabitEthernet <PORT_ID>} | logging {disable, next, policy, rate-limiter, shutdown, tag-priority, vid} | next {<AceId : 1-512>, last}| policy <PolicyId : 0-255> | rate-limiter {<RateLimiterId : 1-16>, disable} | redirect {disable, interface 10GigabitEthernet | GigabitEthernet <PORT_ID>} | tag-priority {0-1, 0-3, 2-3, 4-5, 4-7, 6-7, <TagPriority : 0-7>, any} | vid {<Vid : 1-4095>, any}
```

<AceId : 1-512>	ACE ID
action	Access list action
dmac-type	The type of destination MAC address
frametype	Frame type
ingress	Ingress
logging	Logging frame information. Note: The logging feature only works when the packet length is less than 1518 (without VLAN tags) and the System Log memory size and logging rate are limited.

next	Insert the current ACE before the next ACE ID
policy	Policy
rate-limiter	Rate limiter
redirect	Redirect frame to specific port
shutdown	Shutdown incoming port. The shutdown feature only works when the packet length is less than 1518 (without VLAN tags).
tag-priority	Tag priority
vid	VID field

Default:

N/A

Usage Guide:

To update the specific profile for the **access list.**

Example:

Original:

Profile 1 (action: permit, dmac-type: unicast, frametype: ipv4-icmp, ingress: any, logging: disable, policy: 1, rate-limiter: 1, tag-priority: 1. vid: 1).

Updated:

Profile 1 (action: deny, dmac-type: any, frametype: ipv4-icmp, ingress: any, logging: disable, policy: 1, rate-limiter: 1, tag-priority: 1. vid: 1).

```
Switch# configure terminal
Switch (config)# access-list ace update 1 action deny dmac-type any
```

4.2.16 access-list rate-limiter

Command:

```
access-list rate-limiter <RateLimiterList : 1~16> pps <PpsRate : 0-131071>
```

<RateLimiterList : 1~16>	Rate limiter ID
<PpsRate : 0-131071>	Rate value

Default:

0

Usage Guide:

To set pps rate for specific **rate-limiter ID.**

Example:

To set pps rate(10000 pps) for specific **rate-limiter ID 1.**

```
Switch# configure terminal
Switch (config)# access-list rate-limiter 1 pps 10000
```

4.2.17 access-list rate-limiter pps

Command:

```
access-list rate-limiter pps <PpsRate : 0-131071>
```

<PpsRate : 0-131071> Rate value

Default:

0

Usage Guide:

To set pps rate for all **rate-limiter ID.**

Example:

To set pps rate(10000 pps) for all **rate-limiter ID.**

```
Switch# configure terminal
Switch (config)# access-list rate-limiter pps 100
```

4.2.18 aggregation mode

Command:

```
aggregation mode dmac | ip | port | smac
```

dmac Destination MAC affects the distribution

ip IP address affects the distribution

port IP port affects the distribution

smac Source MAC affects the distribution

Default:

SMAC : Enabled

DMAC : Disabled

IP : Enabled

Port : Enabled

Usage Guide:

To configure **static aggregation mode type.**

Example:

To configure **static aggregation mode type** with **Destination MAC affects the distribution** and **Source MAC affects the distribution only.**

```
Switch# configure terminal
Switch (config)# access-list rate-limiter pps 100
```

4.2.19 aggregation mode

Command:

```
aggregation mode dmac | ip | port | smac
```

dmac Destination MAC affects the distribution

ip IP address affects the distribution

port IP port affects the distribution

smac Source MAC affects the distribution

Default:

SMAC : Enabled

DMAC : Disabled

IP : Enabled

Port : Enabled

Usage Guide:

To configure **static aggregation mode type.**

Example:

To configure **static aggregation mode type** with **Destination MAC affects the distribution** and **Source MAC affects the distribution only.**

```
Switch# configure terminal
Switch (config)# access-list rate-limiter pps 100
```

4.2.20 banner

Command:

```
banner <LINE>
```

<LINE> c banner-text c, where 'c' is a delimiting character

Default:

N/A

Usage Guide:

To configure **banner-text.**

Example:

To configure **banner-text** with word "ddddd".

```
Switch# configure terminal
Switch (config)# banner 1
Enter TEXT message.  End with the character '1'.
ddddd
1
```

Telnet 192.168.0.100

```
ddddd

Username:
```

4.2.21 banner exec

Command:

```
banner login <LINE>
```

<LINE> c banner-text c, where 'c' is a delimiting character

Default:

N/A

Usage Guide:

To configure **login banner-text.**

Example:

To configure **login banner-text** with word "wwwwwwwww".

```
Switch# configure terminal
```

```
Switch (config)# banner exec 1
Enter TEXT message.  End with the character '1'.
ggggggg
1
```

Telnet 192.168.0.100:

```
Username: admin
Password:

ggggggg

#
```

4.2.22 banner login

Command:

```
banner login <LINE>
```

<LINE> c banner-text c, where 'c' is a delimiting character

Default:

N/A

Usage Guide:

To configure **login banner-text.**

Example:

To configure **login banner-text** with word "wwwwwwwwww".

```
Switch# configure terminal
Switch (config)# banner login 1
Enter TEXT message.  End with the character '1'.
wwwwwwwwww
1
```

Console:

```
Press ENTER to get started

wwwwwwwwww

Username: admin
Password:
```

4.2.23 banner motd

Command:

```
banner motd <LINE>
```

<LINE> c banner-text c, where 'c' is a delimiting character

Default:

N/A

Usage Guide:

To configure **motd banner-text.**

Example:

To configure **motd banner-text** with word "ffffff".

```
Switch# configure terminal
Switch (config)# banner motd 1
Enter TEXT message.  End with the character '1'.
ffffff
1
```

Console:

```
ffffff

Press ENTER to get started
```

Username:

4.2.24 clock summer-time

Command:

clock summer-time <WORD> date <Monthstart: 1-12> <Daystart: 1-31> <Yearstart: 1-12> <Timestart: hh:mm > <Monthend: 1-12> <Dayend: 1-31> <Yearend: 1-12> <Timeend: hh:mm > <Offset minutes: 1-1440 >

Default:

N/A

Usage Guide:

To set daylight saving.

Example:

To set daylight saving (Started time: Feb, 3. 2013 8:8AM, End time: Dec, 31. 2013 8:8AM, Offset time: 60 minutes).

Switch# configure terminal

Switch (config)# **clock summer-time 1 date 2 3 2013 8:8 12 31 2013 8:8 60**

4.2.25 clock time zone

Command:

clock timezone <WORD> <timezone: -23-23>

<WORD> name of time zone

Default:

0

Usage Guide:

To set time zone.

Example:

To set time zone (GMT -15) with **profile 1.**

Switch# configure terminal

Switch (config)# **clock timezone 1 -15**

4.2.26 default access-list rate-limiter

Command:

default access-list rate-limiter <RateLimiterId : 1-16>

<RateLimiterId : 1-16> **Rate limiter ID**

Default:

0

Usage Guide:

To default the **Rate limiter.**

Example:

To default the **Rate limiter ID 1.**

Switch# configure terminal Switch (config)# **default access-list rate-limiter 1**

4.2.27 dot1x authentication timer inactivity

Command:

dot1x authentication timer inactivity <10-1000000>

Default:

Aging period: 300

Usage Guide:

To set the **Aging period** for **Network Access Server.**

Example:

To set the **Aging period (147 seconds).**

Switch# configure terminal Switch (config)# **dot1x authentication timer inactivity 147**

4.2.28 dot1x authentication timer re-authenticate

Command:

dot1x authentication timer re-authenticate <1-3600>

Default:

Re-authenticated Period: 3600

Usage Guide:

To set the **Re-authenticated Period** for **Network Access Server.**

Example:

To set the **Re-authenticated Period (777 seconds).**

```
Switch# configure terminal
Switch (config)# dot1x authentication timer re-authenticate 777
```

4.2.29 dot1x feature

Command:

```
dot1x feature guest-vlan | radius-qos | radius-vlan
```

Default:

Disable

Usage Guide:

To enable the **guest-vlan, radius-qos, radius-vlan** for **Network Access Server**

Example:

To enable the **guest-vlan, radius-qos, radius-vlan** for **Network Access Server.**

```
Switch# configure terminal
Switch (config)# dot1x authentication timer re-authenticate 777
```

4.2.30 dot1x guest-vlan

Command:

```
dot1x guest-vlan <1-4095>
```

<1-4095> Guest VLAN ID used when entering the Guest VLAN.

Default:

1

Usage Guide:

To set the value of **guest-vlan** for **Network Access Server**

Example:

To set the value of **guest-vlan(2)** for **Network Access Server**

```
Switch# configure terminal
Switch (config)# dot1x guest-vlan 2
```

4.2.31 dot1x guest-vlan supplicant

Command:

```
dot1x guest-vlan supplicant
```

supplicant The switch remembers if an EAPOL frame has been received on the port for the life-time of the port. Once the switch considers whether to enter the Guest VLAN, it will first check if this option is enabled or disabled.

Default:

Disable

Usage Guide:

To allow all frames automatically entering **guest-vlan** for **Network Access Server**

Example:

To allow all frames automatically entering **guest-vlan** for **Network Access Server**

```
Switch# configure terminal
Switch (config)# dot1x guest-vlan supplicant
```

4.2.32 dot1x max-reauth-req

Command:

```
dot1x max-reauth-req <1-255>
```

Default:

2

Usage Guide:

To define 802.1X re-authentication frequency for **Network Access Server**

Example:

To define 802.1X re-authentication frequency with 78 times for **Network Access Server**

```
Switch# configure terminal
Switch (config)# dot1x max-reauth-req 78
```

4.2.33 dot1x system-auth-control

Command:

```
dot1x system-auth-control
```

Default:

Disable

Usage Guide:

To enable 802.1X service for **Network Access Server**

Example:

To enable 802.1X service for **Network Access Server**

```
Switch# configure terminal
Switch (config)# dot1x system-auth-control
```

4.2.34 dot1x timeout quiet-period

Command:

```
dot1x timeout quiet-period <10-1000000>
```

quiet-period Time in seconds before a MAC-address that failed authentication gets a new authentication chance.

Default:

10

Usage Guide:

To configure 802.1X **hold time** for **Network Access Server**

Example:

To configure 802.1X **hold time**(12 seconds) for **Network Access Server**

```
Switch# configure terminal
Switch (config)# dot1x timeout quiet-period 12
```

4.2.35 dot1x timeout tx-period

Command:

dot1x timeout tx-period <1-65535>

tx-period The time between EAPOL retransmissions.

Default:

30

Usage Guide:

To configure 802.1X **EPOAL timeout** for **Network Access Server**

Example:

To configure 802.1X **EPOAL timeout** (45 seconds) for **Network Access Server**

Switch# configure terminal Switch (config)# **dot1x timeout tx-period 45**

4.2.36 enable password

Command:

enable password <WORD>

<WORD> The UNENCRYPTED (cleartext) password.

Default:

Disable

Usage Guide:

To configure **enable password** for user

Example:

To configure **enable password**(admin) for user

```
Switch# configure terminal
Switch (config)# enable password admin

Press ENTER to get started

Username:
Password:

> enable
Password: *****
#
```

4.2.37 enable password level

Command:

```
enable password level <1-15> <WORD>
```

<1-15> Level number

<WORD> The UNENCRYPTED (cleartext) password.

Default:

Disable

Usage Guide:

To configure **enable password** and specific level for user

Example:

To configure **enable password**(admin) and specific level(15) for user

```
Switch# configure terminal
Switch (config)# enable password level 15 admin

Press ENTER to get started

Username:
Password:

> enable
Password: admin
#
```

4.2.38 enable secret

Command:

enable secret 0 | 5 level <1-15> <WORD>

0 Specifies an UNENCRYPTED password will follow

5 Specifies an ENCRYPTED secret will follow

<1-15> Level number

<WORD> The UNENCRYPTED (cleartext) / ENCRYPTED(MD5) password.

Default:

Disable

Usage Guide:

To configure **enable password** to encrypted secret in the system configurations and specific level for user

Example:

To configure **enable password**(cisco) to encrypted secret in the system configurations and specific level(15) for user

```
Switch# configure terminal
Switch (config)# enable secret 0 level 15 cisco

# show running-config
Building configuration...
enable secret 5 level 15 FC89368B9513DE0760290BCE9A1DA90A
.....
Press ENTER to get started

Username:
Password:

> enable
Password: cisco
#
```

4.2.39 end

Command:

end

Default:

N/A

Usage Guide:

To level the **configure terminal** mode

Example:

To level the **configure terminal** mode

```
Switch# configure terminal
Switch (config)# end
#
```

4.2.40 erps <1-64> guard

Command:

```
erps <1-64> guard <10-2000>
```

<1-64> ERPS group number

<10-2000> Guard time in ms

Default:

500

Usage Guide:

To configure the **Guard Time** for **ERPS.**

Example:

To configure the **Guard Time**(178 ms) for **ERPS**(Profile 1)

```
Switch# configure terminal
Switch (config)# erps 1 guard 178
```

4.2.41 erps <1-64> holdoff

Command:

```
erps <1-64> holdoff < 0-10000>
```

<1-64> ERPS group number

< 0-10000> Holdoff time in ms

Default:

0

Usage Guide:

To configure the **Hold Off Time** for **ERPS**

Example:

To configure the **Hold Off Time** (178 ms) for **ERPS**(Profile 1)

Switch# configure terminal Switch (config)# **erps 1 holdoff 900**

4.2.42 erps <1-64> major

Command:

erps <1-64> major port0 interface {10GigabitEthernet, GigabitEthernet} <PORT0_ID> port1 interface {10GigabitEthernet, GigabitEthernet} <PORT1_ID> [interconnect]

<1-64> ERPS group number

interconnect Major ring is interconnected

Default:

0

Usage Guide:

To create a profile and configure the **Major ERPS interface port 0, port 1.**

Example:

To create a profile 1 and configure the **Major ERPS interface port 0(GigabitEthernet 1/1), port 1(GigabitEthernet 1/2) without interconnected mode**

Switch# configure terminal Switch (config)# **erps 1 major port0 interface GigabitEthernet 1/1 port1 interface GigabitEthernet 1/2**

4.2.43 erps <1-64> mep

Command:

erps <1-64> mep port0 sf <p0_sf: 1-100> aps <p0_aps: 1-100> port1 sf <p1_sf: 1-100> aps

<p1_aps: 1-100>

<1-64> ERPS group number

<p0_sf: 1-100> Index of Port 0 SignalFail MEP

<p0_aps: 1-100> Index of Port 0 APS MEP

<p1_sf: 1-100> Index of Port 1 SignalFail MEP

<p1_aps: 1-100> Index of Port 1 APS MEP

Default:

0

Usage Guide:

To configure **ERPS Instance Data** for specific **ERPS** profile.

Example:

To configure **ERPS Instance Data(Port0: SF MEP = 2, APS MEP = 1. Port1: SF MEP = 4, APS MEP = 3)** for specific **ERPS** profile(1).

Switch# configure terminal

Switch (config)# **erps 1 mep port0 sf 2 aps 1 port1 sf 4 aps 3**

4.2.44 erps <1-64> mep

Command:

erps <1-64> revertive <wtr_time_minutes: 1-12>

<1-64> ERPS group number

<wtr_time_minutes: 1-12> Wait-to-restore time in minutes

Default:

0

Usage Guide:

To configure **WTR time** for specific **ERPS** profile.

Example:

To configure **WTR time**(5 minutes) for specific **ERPS** profile 1.

Switch# configure terminal

Switch (config)# **erps 1 revertive 5**

4.2.45 erps <1-64> rpl neighbor

Command:

erps <1-64> rpl neighbor { port0 | port1 }

port0 ERPS Port 0 interface

port1 ERPS Port 1 interface

Default:

N/A

Usage Guide:

To configure **Ring Protection Link Neighbor Role** for specific **ERPS** interface.

Example:

To configure **Ring Protection Link Neighbor Role** for specific **ERPS** interface..

Switch# configure terminal

Switch (config)# **erps 1 rpl neighbor port0**

4.2.46 erps <1-64> rpl owner

Command:

erps <1-64> rpl owner { port0 | port1 }

port0 ERPS Port 0 interface

port1 ERPS Port 1 interface

Default:

N/A

Usage Guide:

To configure **Ring Protection Link Owner Role** for specific **ERPS** interface.

Example:

To configure **Ring Protection Link Owner Role** for specific **ERPS** interface..

Switch# configure terminal

Switch (config)# **erps 1 rpl owner port0**

4.2.47 erps <1-64> sub

Command:

erps <1-64> sub port0 interface {10GigabitEthernet, GigabitEthernet} <PORT0_ID> { { port0 interface {10GigabitEthernet, GigabitEthernet} <PORT1_ID> }, {interconnect <major_ring_id: 1-64> [virtual-channel] } }

<1-64> ERPS group number

interconnect Sub ring is interconnected

<major_ring_id: 1-64> Major ring group number

virtual-channel Enable virtual channel for sub-ring

Default:

0

Usage Guide:

To create a profile and configure the **Sub ERPS interface port 0, port 1.**

Example 1:

To create a profile 3 and configure the **Sub ERPS interface port 0(GigabitEthernet 1/5), port 1(GigabitEthernet 1/6) without interconnected mode and Major Ring group and virtual-channel**

```
Switch# configure terminal
Switch (config)# erps 3 sub port0 interface GigabitEthernet 1/5 port1 interface GigabitEthernet 1/6
```

Example 2:

To create a profile 2 and configure the **Sub ERPS interface port 0(GigabitEthernet 1/3), port 1(GigabitEthernet 1/4) with interconnected mode and Major Ring group 1 and virtual-channel**

```
Switch# configure terminal
Switch (config)# erps 1 sub port0 interface GigabitEthernet 1/3 interconnect 1 virtual-channel
```

4.2.48 erps <1-64> topology-change propagate

Command:

erps <1-64> topology-change propagate

<1-64> ERPS group number

topology-change Topology Change

propagate Propagate

Default:

N/A

Usage Guide:

To configure **topology change notification (TCN)** propagation for the specific profile.

Example:

To configure **topology change notification (TCN)** propagation for the specific profile 1

```
Switch# configure terminal
Switch (config)# erps 1 topology-change propagate
```

4.2.49 erps <1-64> topology-change propagate

Command:

```
erps <1-64> version 1 | 2
```

<1-64> ERPS group number

version Version

Default:

V2

Usage Guide:

To configure **ERPS version** number for the specific profile.

Example:

To configure **ERPS version 1** for the specific profile 1.

```
Switch# configure terminal
Switch (config)# erps 1 version 1
```

4.2.50 erps <1-64> vlan

Command:

```
erps <1-64> vlan { none | [ add | remove ] <vlans> }
```

<1-64> ERPS group number

<vlan_list> List of VLANs

add Add to set of included VLANs

none Do not include any VLANs

remove Remove from set of included VLANs

Default:

V2

Usage Guide:

To configure **ERPS VLANs** for the specific profile.

Example:

To configure **ERPS VLANs**(VLAN5 - VLAN8) for the specific profile 1.

```
Switch# configure terminal
Switch (config)# erps 1 vlan add 5-8
```

4.2.51 evc

Command:

```
evc <EvcId : 1-4096> vid <evc_vid> ivid <ivid> interface ( * | 10GigabitEthernet |
GigabitEthernet [ <port_list> ] ) learning [ disable ] policer { <PolicerId : 1-2048> | none |
discard }
```

mode Setup policer mode

aware Color-aware mode

blind Color-blind mode

coupled Coupling mode

rate-type Setup rate type

data Data rate policing

line Line rate policing

type Setup policer type

mef MEF ingress bandwidth profile

single Single bucket policer

Default:

N/A

Usage Guide:

To update a profile for **EVC Policer (Ingress Bandwidth Profile).**

Example:

To update **EVC Policer (Ingress Bandwidth Profile)** with **EIR 1000** for policer 1

```
Switch# configure terminal
Switch (config)# evc policer update 1 eir 1000
```

4.2.56 evc update

Command:

```
evc update <EvcId : 1-4096> vid <evc_vid> ivid <ivid> interface ( * | 10GigabitEthernet |
GigabitEthernet [ <port_list> ] ) learning [ disable ] policer { <PolicerId : 1-2048> | none | discard }
```

<EvcId : 1-4096> EVC identifier

vid Setup EVC VLAN ID

<EvcVid : 1-4095> EVC VLAN ID

ivid Setup internal EVC VLAN ID

<Ivid : vlan_id> Internal VLAN ID

interface Setup NNI

learning Setup learning

policer Policer (ingress bandwidth profile)

<PolicerId : 1-2048> Policer ID

<vlan_list> List of VLANs

discard Map to policer discarding all frames

none Map to policer allowing all frames

Default:

0

Usage Guide:

To update an ID for **Ethernet Virtual Circuits (EVC)**.

Example:

To update **Ethernet Virtual Circuits (EVC identifier: 1, EVC VLAN ID: 10)**.

```
Switch# configure terminal
Switch (config)# evc update 1 vid 10
```

4.2.57 exit

Command:

```
exit
```

Default:

N/A

Usage Guide:

To exit **configure terminal** mode.

Example:

To exit **configure terminal** mode.

```
Switch# configure terminal
```

```
Switch (config)# exit
#
```

4.2.58 green-ethernet led interval

Command:

```
green-ethernet led interval <0~24> intensity <0-100>
```

<0~24> Interval from 00.00 to 24.00 (00 is used to start at midnight, while 24 is used to stop at midnight).

intensity LEDs intensity.

<0-100> Intensity from 0% (LEDs OFF) to 100%

Default:

N/A

Usage Guide:

To configure **LED Power reduction** for interval time.

Example:

To configure **LED Power reduction** as tabled below.

Start Time	End Time	Intensity
08:00	13:00	80 %
13:00	08:00	20 %

```
Switch# configure terminal
Switch (config)# green-ethernet led interval 8-13 intensity 80
```

4.2.59 green-ethernet led on-event

Command:

```
green-ethernet led on-event error | link-change <0-65535>
```

error Set LEDs intensity to 100% if an error occurs.

link-change Specifies how long to turn LEDs intensity into 100%, when a link changes state.

<0-65535> Number of seconds to set LEDs intensity at 100% at link change.

Default:

N/A

Usage Guide:

To configure **LED Power on-event** to trigger LED light

Example:

To configure **LED Power on-event** as tabled below:

Switch# configure terminal Switch (config)# **green-ethernet led on-event error link-change 55**

4.2.60 gvrp

Command:

gvrp

Default:

Disable

Usage Guide:

To enable **GVRP.**

Example:

To enable **GVRP**.

Switch# configure terminal Switch (config)# **gvrp**

4.2.61 gvrp max-vlans

Command:

gvrp max-vlans <1-4095>

Default:

20

Usage Guide:

To configure how many VLANs will be in **GVRP**.

Example:

To configure 200 VLANs in **GVRP**.

Switch# configure terminal
Switch (config)# **gvrp max-vlans 200**

4.2.62 gvrp time

Command:

gvrp time join-time <Jointime : 1-20> leave-all-time <Leavealltime : 1000-5000> leave-time <Leavetime : 60-300>

join-time Set GARP protocol parameter JoinTime. See IEEE 802.1D-2004, clause 12.11

<Jointime : 1-20> join-time in units of centi seconds. Range is 1-20. Default is 20.

leave-all-time Set GARP protocol parameter LeaveAllTime. See IEEE 802.1D-2004, clause 12.11

<Leavealltime : 1000-5000> leave-all-time in units of centi seconds Range is 1000-5000. Default is 1000.

leave-time Set GARP protocol parameter LeaveTime. See IEEE 802.1D-2004, clause 12.11

<Leavetime : 60-300> leave-time in units of centi seconds. Range is 60-300. Default is 60.

Default:

Join-time:	20
Leave-time:	60
LeaveAll-time:	1000

Usage Guide:

To configure **Join-time, Leave-time, Leave all-time** for **GVRP.**

Example:

To configure **Join-time, Leave-time, Leave all-time** for **GVRP** as tabled below.

Join-time:	5
Leave-time:	150
LeaveAll-time:	1200

Switch# configure terminal
Switch (config)# **gvrp time join-time 5 leave-all-time 1200 leave-time 150**

4.2.63 help

Command:

help

Default:

N/A

Usage Guide:

To explain how to use commands.

Example:

To explain how to use commands.

```
Switch# configure terminal
Switch (config)# help
Help may be requested at any point in a command by entering
a question mark '?'.  If nothing matches, the help list will
be empty and you must back up until entering a '?' showing the
available options.
Two styles of help are provided:
1. Full help is available when you are ready to enter a
command argument (e.g. 'show ?') and describes each possible
argument.
2. Partial help is provided when an abbreviated argument is entered
and you want to know what arguments match the input
(e.g. 'show pr?'.)
```

4.2.64 hostname

Command:

hostname < WORD >

< WORD > This system's network name

Default:

N/A

Usage Guide:

To configure switch's **hostname.**

Example:

To configure switch's **hostname** with **"fsbestswitch"**

Switch# configure terminal
Switch (config)# **hostname fsbestswitch**
fsbestswitch(config)#

4.2.65 interface * | 10GigabitEthernet | GigabitEthernet

Command:

interface * | 10GigabitEthernet <port_type_list> | GigabitEthernet <port_type_list>

*	All switches or All ports
GigabitEthernet	1 Gigabit Ethernet Port
10GigabitEthernet	10 Gigabit Ethernet Port

Default:

N/A

Usage Guide:

To enter the **interface mode.**

Example:

To enter the **interface 10GigabitEthernet 1/2**

Switch# configure terminal
Switch (config)# **interface 10GigabitEthernet 1/2**
Switch (config-if) #

4.2.65.1 access-list action permit

Command:

access-list action permit

action	Access list action

Default:

Permit

Usage Guide:

To configure **Permit** for the **ACL action**.

Example:

To configure **Permit ACL action** for the **GigabitEthernet X/X**.

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **access-list action permit**

4.2.65.2 access-list action deny

Command:

access-list action deny

action Access list action

Default:

Deny

Usage Guide:

To configure **Deny** for the **ACL action**.

Example:

To configure **Deny ACL action** for the **GigabitEthernet X/X**.

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **access-list action deny**

4.2.65.3 access-list logging

Command:

access-list logging

logging Logging frame information. Note: The logging feature only works when the packet length is less than 1518 (without VLANtags) and the System Log memory size and logging rate is limited.

Default:

Disable

Usage Guide:

To enable **Logging** function for the **ACL**.

Example:

To enable **ACL Logging** function for the **GigabitEthernet X/X**.

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **access-list logging**

4.2.65.4 access-list policy

Command:

access-list policy <PolicyId : 0-255>

policy Policy

<PolicyId : 0-255> Policy ID

Default:

Policy ID: 0

Usage Guide:

To configure **Policy ID** for the **ACL**.

Example:

To configure **ACL Policy ID 1** for the **GigabitEthernet X/X**.

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **access-list policy 1**

4.2.65.5 access-list port-state

Command:

access-list port-state

port-state Re-enable shutdown port that was shutdown by access-list module

Default:

Enable

Usage Guide:

To enable **Port-state** function for the **ACL**.

Example:

To configure **ACL Port-state** function for the **GigabitEthernet X/X**.

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **access-list port-state**

4.2.65.6 access-list rate-limiter

Command:

access-list rate-limiter <RateLimiterId : 1-16>

rate-limiter Rate limiter

<RateLimiterId : 1-16> Rate limiter ID

Default:

Disable

Usage Guide:

To apply **Rate Limiter ID** for the **ACL**.

Example:

To apply **ACL Rate Limiter ID 1** for the **GigabitEthernet X/X**.

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **access-list rate-limiter 1**

4.2.65.7 access-list redirect interface

Command:

access-list redirect interface 10GigabitEthernet <port_type_list> | GigabitEthernet <port_type_list>

redirect Redirect frame to specific port

Default:

Disable

Usage Guide:

To redirect frames to specific Port**.**

Example:

To redirect **GigabitEthernet X/X** frames to **GigabitEthernet 1/2**.

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **access-list redirect interface GigabitEthernet 1/2**

4.2.65.8 access-list shutdown

Command:

access-list shutdown

shutdown Shut down incoming port. The shutdown feature only works when the packet length is less than 1518 (without VLAN tags).

Default:

Disable

Usage Guide:

To enable **Shutdown** function for the **ACL**.

Example:

To enable **ACL Shutdown** function for the **GigabitEthernet X/X**.

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **access-list shutdown**

4.2.65.9 aggregation group

Command:

aggregation group <uint>

aggregation Create an aggregation

group Create an aggregation group

<uint> The aggregation group id

Default:

N/A

Usage Guide:

To configure **aggregation group**.

Example:

To configure **aggregation group 7** for the **GigabitEthernet X/X**.

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **aggregation group 7**

4.2.65.10 description

Command:

description <string>

description Port description

<string> specifies a comment or a description of the port to assist the user. (Length: 1-12 characters)

Default:

N/A

Usage Guide:

To configure port description**.**

Example:

To configure port description (IPTV_Port) for the **GigabitEthernet X/X.**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **description IPTV_Port**

4.2.65.11 do

Command:

do < exec commands >

do To run exec commands in config mode

Default:

N/A

Usage Guide:

To run **exec commands** in **configure terminal mode**

Example:

To run "show aaa" in **configure terminal mode.**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # do show aaa
console : local
telnet  : local
ssh     : local
http    : local
```

4.2.65.12 dot1x guest-vlan

Command:

```
dot1x guest-vlan
```

dot1x IEEE Standard for port-based Network Access Control

guest-vlan Enables/disables guest VLAN

Default:

Disable

Usage Guide:

To enable **Guest VLAN**

Example:

To enable **Guest VLAN** for **GigabitEthernet X/X**.

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # dot1x guest-vlan
```

4.2.65.13 dot1x port-control

Command:

```
dot1x port-control auto | force-authorized | force-unauthorized | mac-based | multi | single
```

dot1x IEEE Standard for port-based Network Access Control

port-control Sets the port security state.

auto	Port-based 802.1X Authentication
force-authorized	Port access is allowed
force-unauthorized	Port access is not allowed
mac-based	Switch authenticates on behalf of the client
multi	Multiple Host 802.1X Authentication
single	Single Host 802.1X Authentication

Default:

Force-authorized

Usage Guide:

To configure **Port-control** mode for 802.1X

Example:

To configure **Port-Based 802.1X(Auto)** mode for **GigabitEthernet X/X**.

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # dot1x port-control auto
```

4.2.65.14 dot1x radius-qos

Command:

```
dot1x radius-qos
```

dot1x	IEEE Standard for port-based Network Access Control
radius-qos	Enables/disables per-port state of RADIUS-assigned QoS.

Default:

Disable

Usage Guide:

To enable **RADIUS-assigned QoS** for 802.1X

Example:

To enable **RADIUS-assigned QoS** for **GigabitEthernet X/X.**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # dot1x radius-qos
```

4.2.65.15 dot1x radius-vlan

Command:

dot1x radius-vlan

dot1x IEEE Standard for port-based Network Access Control

radius-vlan Enables/disables per-port state of RADIUS-assigned VLAN.

Default:

Disable

Usage Guide:

To enable **RADIUS-assigned VLAN** for 802.1X

Example:

To enable **RADIUS-assigned VLAN** for **GigabitEthernet X/X**.

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **dot1x radius-vlan**

4.2.65.16 dot1x re-authenticate

Command:

dot1x re-authenticate

dot1x IEEE Standard for port-based Network Access Control

re-authenticate Refresh (restart) 802.1X authentication process.

Default:

N/A

Usage Guide:

To restart 802.1X authentication process.

Example:

To restart 802.1X authentication process for **GigabitEthernet X/X**.

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **dot1x re-authenticate**

4.2.65.17 duplex

Command:

duplex auto | full | half

duplex Interface duplex

auto Auto negotiation of duplex mode.

full Forced full duplex.

half Forced half duplex.

Default:

Auto

Usage Guide:

To configure **duplex** mode for interface.

Example:

To configure auto **duplex** mode for **GigabitEthernet X/X.**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **duplex auto**

4.2.65.18 end

Command:

end

end Go back to EXEC mode

Default:

Auto

Usage Guide:

To back to **EXEC mode**

Example:

To back to **EXEC mode**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # end
Switch#
```

4.2.65.19 evc dei

Command:

```
evc dei colored | fixed
```

evc Ethernet Virtual Connections

dei Setup DEI mode

colored Allow policer to set DEI

fixed Use classified DEI

Default:

Fixed

Usage Guide:

To configure EVC DEI mode

Example:

To configure **EVC DEI mode (Colored)** for **GigabitEthernet X/X.**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # evc dei colored
```

4.2.65.20 evc l2cp discard(GG)

Command:

```
evc l2cp discard <L2cpDiscardList : 0~31>
```

evc Ethernet Virtual Connections

l2cp Setup L2CP forwarding

discard Discard L2CP frames

<L2cpDiscardList : 0~31> Select BPDU addresses (0-15) and GARP addresses (16-31**)**

Default:

N/A

Usage Guide:

To configure policy ID of **L2CP discard**

Example:

To configure policy ID 1 of **L2CP discard** for **GigabitEthernet X/X.**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # evc l2cp discard 1
```

4.2.65.21 evc l2cp forward(GG)

Command:

```
evc l2cp forward <L2cpForwardList : 0~31>
```

evc Ethernet Virtual Connections

l2cp Setup L2CP forwarding

forward Allow forwarding of L2CP frames

<L2cpForwardList : 0~31> Select BPDU addresses (0-15) and GARP addresses (16-31)

Default:

N/A

Usage Guide:

To configure policy ID of **L2CP forward**

Example:

To configure policy 1 for **L2CP forward** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # evc l2cp forward 1
```

4.2.65.22 evc l2cp peer(GG)

Command:

```
evc l2cp forward <L2cpPeerList : 0~31>
```

evc Ethernet Virtual Connections

l2cp Setup L2CP forwarding

peer Redirect L2CP frames to local protocol entity

<L2cpPeerList : 0~31> Select BPDU addresses (0-15) and GARP addresses (16-31)

Default:

N/A

Usage Guide:

To configure policy ID of **L2CP peer**

Example:

To configure policy 1 of **L2CP peer** for **GigabitEthernet X/X.**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **evc l2cp peer 1**

4.2.65.23 evc update dei

Command:

evc update dei colored | fixed

evc Ethernet Virtual Connections

update Update existing entry

dei Setup DEI mode

colored Allow policer to set DEI

fixed Use classified DEI

Default:

Fixed

Usage Guide:

To update EVC DEI mode

Example:

To update **EVC DEI mode (Colored)** for **GigabitEthernet X/X.**

Switch# configure terminal

```
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # evc update dei colored
```

4.2.65.24 excessive-restart

Command:

```
excessive-restart
```

excessive-restart Restart backoff algorithm after 16 collisions (No excessive-restart means discard frame after 16 collisions)

Default:

Discard

Usage Guide:

To enable **Backoff Algorithm** for the specific interface

Example:

To enable **Backoff Algorithm** for the **GigabitEthernet X/X.**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # excessive-restart
```

4.2.65.25 exit

Command:

```
exit
```

exit Exit from current mode

Default:

None

Usage Guide:

To exit current mode

Example:

To exit current mode**.**

```
Switch# configure terminal
```

```
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # exit
Switch (config)#
```

4.2.65.26 flow control

Command:

```
flowcontrol off | on
```

flowcontrol Traffic flow control.

off Disable flow control.

on Enable flow control.

Default:

Disable

Usage Guide:

To enable **Flow-control** for specific interface

Example:

To enable **Flow-control** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # flowcontrol on
```

4.2.65.27 green-ethernet energy-detect(GG)

Command:

```
green-ethernet energy-detect
```

green-ethernet Green ethernet (Power reduction)

energy-detect Enable power saving for ports with no link partner.

Default:

N/A

Usage Guide:

To enable power saving for ports with no link partner

Example:

To enable power saving for ports with no link for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # green-ethernet energy-detect
```

4.2.65.28 green-ethernet short-reach(GG)

Command:

```
green-ethernet short-reach
```

green-ethernet Green ethernet (Power reduction)

short-reach Enable power saving for ports which is connect to link partner with short cable.

Default:

N/A

Usage Guide:

To enable power saving for ports with short cable

Example:

To enable power saving for ports with short cable for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # green-ethernet short-reach
```

4.2.65.29 gvrp join-request vlan(GG)

Command:

```
gvrp join-request vlan <vlan_list>
```

gvrp Enable GVRP on port(s)

join-request Emit a Join-Request for test purpose

Default:

N/A

Usage Guide:

To send **GVRP Join-Request** to specific interface

Example:

To send **GVRP Join-Request(VLAN 1)** to **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **gvrp join-request vlan 1**

4.2.65.30 gvrp leave-request vlan(GG)

Command:

gvrp leave-request vlan <vlan_list>

gvrp Enable GVRP on port(s)

leave-request Emit a Leave-Request for test purpose

Default:

N/A

Usage Guide:

To send **GVRP Leave-Request** to specific interface

Example:

To send **GVRP Leave-Request(VLAN 1)** to **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **gvrp leave-request vlan 1**

4.2.65.31 ip arp inspection check-vlan

Command:

ip arp inspection check-vlan

arp Address Resolution Protocol

inspection ARP inspection

check-vlan ARP inspection VLAN mode config

Default:

Disable

Usage Guide:

To configure **Check-VLAN mode** into **ARP inspection** for specific interface

Example:

To configure **Check-VLAN mode (Enabled)** into **ARP inspection** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # ip arp inspection check-vlan
```

4.2.65.32 ip arp inspection logging

Command:

```
ip arp inspection logging all | deny | permit
```

arp Address Resolution Protocol

inspection ARP inspection

logging ARP inspection logging mode config

all log all entries

deny log denied entries

permit log permitted entries

Default:

None

Usage Guide:

To configure **Logging type** into **ARP inspection** for specific interface

Example:

To configure **Logging type (All)** into **ARP inspection** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # ip arp inspection logging all
```

4.2.65.33 ip arp inspection trust

Command:

ip arp inspection trust

arp Address Resolution Protocol

inspection ARP inspection

trust ARP inspection trust config

Default:

Trusted

Usage Guide:

To configure Trusted into **ARP inspection** for specific interface

Example:

To configure Trusted into **ARP inspection** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **ip arp inspection trust**

4.2.65.34 ip dhcp snooping trust

Command:

ip dhcp snooping trust

Default:

Trusted

Usage Guide:

To configure Trusted into **DHCP Snooping** for specific interface

Example:

To configure Trusted into **DHCP Snooping** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **ip dhcp snooping trust**

4.2.65.35 ip igmp snooping filter

Command:

ip igmp snooping filter <ProfileName : word16>

<ProfileName : word16> Profile name in 16 words

Default:

N/A

Usage Guide:

To apply the **IGMP Snooping filter** ID for specific interface

Example:

To apply the **IGMP Snooping filter** ID 1 for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **ip igmp snooping filter 1**

4.2.65.36 ip igmp snooping immediate-leave

Command:

ip igmp snooping immediate-leave

Default:

Disabled

Usage Guide:

To enable **IGMP Snooping Immediate-leave (Fast Leave)** for specific interface

Example:

To enable **IGMP Snooping Immediate-leave (Fast Leave)** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **ip igmp snooping immediate-leave**

4.2.65.37 ip igmp snooping max-groups

Command:

ip igmp snooping max-groups <Throttling : 1-10>

max-groups IGMP group throttling configuration

<Throttling : 1-10> Maximum number of IGMP group registration

Default:

Unlimited

Usage Guide:

To limit maximum number of **IGMP group** for specific interface

Example:

To limit 5 groups of **IGMP** for **GigabitEthernet X/X**

Switch# configure terminal

Switch (config)# interface GigabitEthernet X/X

Switch (config-if) # **ip igmp snooping max-groups 5**

4.2.65.38 ip igmp snooping mrouter

Command:

ip igmp snooping mrouter [automatic | fix | none]

mrouter Multicast router port configuration

automatic auto mode

fix fix mode

none none mode

Default:

Auto

Usage Guide:

To configure **Multicast router port mode** for specific interface

Example:

To configure **Multicast router port mode** (fix) for **GigabitEthernet X/X**

Switch# configure terminal

Switch (config)# interface GigabitEthernet X/X

Switch (config-if) # **ip igmp snooping mrouter fix**

4.2.65.39 ip verify source

Command:

ip verify source

Default:

Disabled

Usage Guide:

To enable **IP Source Guard** for specific interface

Example:

To enable **IP Source Guard** for **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **ip verify source**

4.2.65.40 ip verify source limit

Command:

ip verify source limit <0-2>

<0-2> the number of limit

Default:

Unlimited

Usage Guide:

To limit numbers of **Dynamic Client** for specific interface

Example:

To limit 2 numbers of **Dynamic Client** for **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **ip verify source limit 2**

4.2.65.41 ipv6 mld snooping filter

Command:

ipv6 mld snooping filter <ProfileName : word16>

filter Access control on MLD multicast group registration

<ProfileName : word16> Profile name in 16 words

Default:

N/A

Usage Guide:

To apply the **MLD Snooping filter** ID for specific interface

Example:

To apply the **MLD Snooping filter** ID 1 for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **ipv6 mld snooping filter 1**

4.2.65.42 ipv6 mld snooping immediate-leave

Command:

ipv6 mld snooping immediate-leave

Default:

Disabled

Usage Guide:

To enable **MLD Snooping Immediate-leave (Fast Leave)** for specific interface

Example:

To enable **MLD Snooping Immediate-leave (Fast Leave)** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **ipv6 mld snooping immediate-leave**

4.2.65.43 ipv6 mld snooping max-groups

Command:

ipv6 mld snooping max-groups <Throttling : 1-10>

max-groups IGMP group throttling configuration

<Throttling : 1-10> Maximum number of IGMP group registration

Default:

Unlimited

Usage Guide:

To limit maximum number of **MLD group** for specific interface

Example:

To limit 5 groups of **MLD** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **ipv6 mld snooping max-groups 5**

4.2.65.44 ipv6 mld snooping mrouter

Command:

ipv6 mld snooping mrouter [automatic | fix | none]

mrouter Multicast router port configuration

automatic auto mode

fix fix mode

none none mode

Default:

Auto

Usage Guide:

To configure **MLD router port mode** for specific interface

Example:

To configure **MLD router port mode** (fix) for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **ipv6 mld snooping mrouter fix**

4.2.65.45 lacp

Command:

lacp

lacp Enable LACP on this interface

Default:

Disabled

Usage Guide:

To enable **LACP** for specific interface

Example:

To enable **LACP** for **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **lacp**

4.2.65.46 lacp key

Command:

lacp key <1-65535> | auto

lacp Enable LACP on this interface

key Key of the LACP aggregation

<1-65535> Key value

auto Choose a key based on port speed

Default:

Auto

Usage Guide:

To configure **LACP key** for specific interface

Example:

To configure **LACP key** (555) for **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X

Switch (config-if) # **lacp key 555**

4.2.65.47 lacp port-priority

Command:

lacp port-priority <1-65535>

lacp Enable LACP on this interface

port-priority LACP priority of the port

<1-65535> Priority value, lower means higher priority

Default:

32768

Usage Guide:

To configure **LACP port-priority** for specific interface

Example:

To configure **LACP port-priority** (555) for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **lacp port-priority 555**

4.2.65.48 lacp role

Command:

lacp role active | passive

lacp Enable LACP on this interface

role Active / Passive (speak if spoken to) role

active Transmit LACP BPDUs continuously

passive Wait for neighbour LACP BPDUs before transmitting

Default:

Active

Usage Guide:

To configure **LACP role** for specific interface

Example:

To configure **LACP role** (passive) for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # lacp role passive
```

4.2.65.49 lacp timeout

Command:

```
lacp timeout fast | slow
```

lacp Enable LACP on this interface

timeout The period between BPDU transmissions

fast Transmit BPDU each second (fast timeout)

slow Transmit BPDU each 30th second (slow timeout)

Default:

Fast

Usage Guide:

To configure **LACP timeout** type for specific interface

Example:

To enable **LACP timeout** type (slow) for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # lacp timeout slow
```

4.2.65.50 lldp cdp-aware

Command:

```
lldp cdp-aware
```

lldp LLDP configurations

cdp-aware Configures if the interface shall be CDP aware (CDP discovery information is added to the LLDP neighbor table)

Default:

Passive

Usage Guide:

To configure **MIB variable retrieve** local info or remote info of **LLDP** for specific interface

Example:

To configure **MIB variable retrieve** (local info) of **LLDP** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **lldp cdp-aware**

4.2.65.51 lldp med media-vlan policy-list

Command:

lldp med media-vlan policy-list <v_range_list>

lldp LLDP configurations

med Media Endpoint Discovery

media-vlan Media VLAN assignment

policy-list Assignment of policies

<v_range_list> Policies to assign to the interface

Default:

N/A

Usage Guide:

To apply **MED Media-VLAN** policy of **LLDP** for specific interface

Example:

To apply **MED Media-VLAN** policy 2 of **LLDP**for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **lldp med media-vlan policy-list 2**

4.2.65.52 lldp med transmit-tlv

Command:

lldp med transmit-tlv [capabilities] [location] [network-policy]

lldp LLDP configurations

med Media Endpoint Discovery

transmit-tlv LLDP-MED Location Type Length Value parameter.

capabilities Enable transmission of the optional capabilities TLV.

location Enable transmission of the optional location TLV.

network-policy Enable transmission of the optional network-policy TLV**.**

Default:

N/A

Usage Guide:

To configure **LLDP-MED TLV Type** for specific interface

Example:

To enable **LLDP-MED TLV (capabilities and location)** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **lldp med transmit-tlv capabilities location**

4.2.65.53 lldp receive

Command:

lldp receive

lldp LLDP configurations

receive Enable/Disable decoding of received LLDP frames.

Default:

Both (Tx +Rx)

Usage Guide:

To configure **LLDP Rx only mode** for specific interface

Example:

To configure **LLDP Rx only mode** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **lldp receive**

4.2.65.54 lldp tlv-select management-address

Command:

lldp tlv-select management-address

lldp LLDP configurations

tlv-select To transmit which optional TLVs.

management-address Enable/Disable transmission of management address.

Default:

Enabled

Usage Guide:

To enable **management address** of **LLDP TLV** for specific interface

Example:

To enable **management address** of **LLDP TLV** for **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **lldp tlv-select management-address**

4.2.65.55 lldp tlv-select port-description

Command:

lldp tlv-select port-description

lldp LLDP configurations

tlv-select To transmit which optional TLVs.

port-description Enable/Disable transmission of port description.

Default:

Enabled

Usage Guide:

To enable **port-description** of **LLDP TLV** for specific interface

Example:

To enable **port-description** of **LLDP TLV** for **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X

Switch (config-if) # **lldp tlv-select port-description**

4.2.65.56 lldp tlv-select system-capabilities

Command:

lldp tlv-select system-capabilities

lldp LLDP configurations

tlv-select To transmit which optional TLVs.

system-capabilities Enable/Disable transmission of system capabilities.

Default:

Enabled

Usage Guide:

To enable **system-capabilities** of **LLDP TLV** for specific interface

Example:

To enable **system-capabilities** of **LLDP TLV** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **lldp tlv-select system-capabilities**

4.2.65.57 lldp tlv-select system-description

Command:

lldp tlv-select system-description

lldp LLDP configurations

tlv-select To transmit which optional TLVs.

system-description Enable/Disable transmission of system description.

Default:

Enabled

Usage Guide:

To enable **system-description** of **LLDP TLV** for specific interface

Example:

To enable **system-description** of **LLDP TLV** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # lldp tlv-select system-description
```

4.2.65.58 lldp tlv-select system-name

Command:

```
lldp tlv-select system-name
```

lldp LLDP configurations

tlv-select To transmit which optional TLVs.

system-name Enable/Disable transmission of system name.

Default:

Enabled

Usage Guide:

To enable **system-name** of **LLDP TLV** for specific interface

Example:

To enable **system-name** of **LLDP TLV** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # lldp tlv-select system-name
```

4.2.65.59 lldp transmit

Command:

```
lldp transmit
```

lldp LLDP configurations

transmit Enable/Disabled transmission of LLDP frames.

Default:

Both (Tx +Rx)

Usage Guide:

To configure **LLDP Tx only mode** for specific interface

Example:

To configure **LLDP Tx only mode** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # lldp transmit
```

4.2.65.60 loop-protect

Command:

```
loop-protect
```

loop-protect Loop protection configuration

Default:

Enabled

Usage Guide:

To enable **loop-protect** for specific interface

Example:

To enable **loop-protect** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # loop-protect
```

4.2.65.61 loop-protect action

Command:

```
loop-protect action [log] [shutdown]
```

loop-protect Loop protection configuration

action Action if loop detected

log Generate log

shutdown Shutdown port

Default:

Shutdown

Usage Guide:

To configure **action mode** of **Loop protection** for specific interface

Example:

To configure **action mode (log** and **shutdown)** of **Loop protection** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **loop-protect action shutdown log**

4.2.65.62 loop-protect tx-mode

Command:

loop-protect tx-mode

loop-protect Loop protection configuration

tx-mode Actively generate PDUs

Default:

Enabled

Usage Guide:

To enable **tx-mode** of **Loop protection** for specific interface

Example:

To enable **tx-mode** of **Loop protection** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **loop-protect tx-mode**

4.2.65.63 loop-protect tx-mode

Command:

loop-protect tx-mode

loop-protect Loop protection configuration

tx-mode Actively generate PDUs

Default:

Enabled

Usage Guide:

To enable **tx-mode** of **Loop protection** for specific interface

Example:

To enable **tx-mode** of **Loop protection** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **loop-protect tx-mode**

4.2.65.64 mac address-table learning

Command:

mac address-table learning [secure]

mac MAC keyword

address-table MAC table configuration

learning Port learning mode

secure Port Secure mode

Default:

Enabled (Auto)

Usage Guide:

To enable **learning** of **MAC address table** for specific interface

Example:

To enable **learning** of **MAC address table** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **mac address-table learning**

4.2.65.65 media-type

Command:

media-type dual | rj45 | sfp

media-type Media type.

dual Dual media interface (copper & fiber interface).

rj45 rj45 interface (copper interface).

sfp sfp interface (fiber interface).

Default:

N/A

Usage Guide:

To configure **Copper** or **Fiber mode** of **media type** for specific interface

Example:

To configure **Copper mode** of **media type** for **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **media-type rj45**

4.2.65.66 mtu

Command:

mtu <1518-10056>

mtu Maximum transmission unit

<1518-10056> Maximum frame size in bytes.

Default:

10056

Usage Guide:

To configure **MTU sizes** for specific interface

Example:

To configure **MTU sizes (9000)** for **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **mtu 9000**

4.2.65.67 mvr immediate-leave

Command:

mvr immediate-leave

mvr Multicast VLAN Registration configuration

immediate-leave Immediate leave configuration

Default:

Disabled

Usage Guide:

To enable **Immediate-leave of MVR** for specific interface

Example:

To enable **Immediate-leave of MVR** for **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **mvr immediate-leave**

4.2.65.68 mvr name

Command:

mvr name <MvrName : word16> type [receiver | source]

mvr Multicast VLAN Registration configuration

name MVR multicast name

<MvrName : word16> MVR multicast VLAN name

type MVR port role configuration

receiver MVR receiver port

source MVR source port

Default:

Inactive

Usage Guide:

To configure **port role** of specific **MVR profile** for specific interface

Example:

To configure **port role (source)** of **MVR profiles (111)** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **mvr name 111 type source**

4.2.65.69 mvr vlan

Command:

mvr vlan <v_vlan_list> type [source | receiver]

mvr Multicast VLAN Registration configuration

vlan MVR multicast vlan

<vlan_list> MVR multicast VLAN list

type MVR port role configuration

receiver MVR receiver port

source MVR source port

Default:

Inactive

Usage Guide:

To configure **port role** of specific **MVR VLAN ID** for specific interface

Example:

To configure **port role (source)** of **MVR VLAN ID (111)** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **mvr name 111 type source**

4.2.65.70 network-clock synchronization ssm

Command:

network-clock synchronization ssm

network-clock network-clock

synchronization SSM enable/disable.

ssm SSM enable/disable.

Default:

Disable

Usage Guide:

To enable **SSM** of **SyncE** for specific interface

Example:

To enable **SSM** of **SyncE** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **network-clock synchronization ssm**

4.2.65.71 no

Command:

no

no Negate a command or set its defaults

Default:

N/A

Usage Guide:

To default the function for specific interface

Example:

To enable the function (**network-clock synchronization ssm**) for **GigabitEthernet X/X.**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **no network-clock synchronization ssm**

4.2.65.72 ping ip

Command:

ping ip <ipv4_addr> size <size: 2-1452>

ping The ping command allows you to test connectivity to a network host from the appliance

ip ip

<ipv4_addr> IP address

size size

<size: 2-1452> Default is 56 (excluding MAC, IP and ICMP headers)

Default:

N/A

Usage Guide:

To run Ping function for specific interface

Example:

To run Ping function (IP address: 10.10.10.10 with size 88 bytes) for **GigabitEthernet X/X.**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **ping ip 10.10.10.10 size 88**

4.2.65.73 poe mode

Command:

poe mode { standard | plus }

poe Power Over Ethernet.

mode PoE mode.

plus Set mode to PoE+ (Maximum power 30.0 W)

standard Set mode to PoE (Maximum power 15.4 W)

Default:

N/A

Usage Guide:

To configure 802.3at/af mode for specific interface

Example:

To configure 802.3at mode for **GigabitEthernet X/X.**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **poe mode plus**

4.2.65.74 poe pdcheck IP

Command:

poe pdcheck IP <ipv4_addr>

poe	Power Over Ethernet.
pdcheck	Allows user to enable or disable per port PD Alive Check function.
IP	To set PoE device IP address here for system making ping to the PoE device.
<ipv4_addr>	<ipv4_addr>

Default:

N/A

Usage Guide:

To configure **Ping PD IP Address** of **PoE** for specific interface

Example:

To configure **Ping PD IP Address** (10.101.10.10) of **PoE** for **GigabitEthernet X/X.**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **poe pdcheck IP 10.101.10.10**

4.2.65.75 poe pdcheck action

Command:

poe pdcheck action { reboot | alarm | reboot-alarm }

poe	Power Over Ethernet.
pdcheck	Allows user to enable or disable per port PD Alive Check function.
action	Allows user to set which action will be applied if the PD is without any response
alarm	It means system will issue an alarm message via Syslog, SMTP.
reboot	It means system will reset the PoE port that is connected to the PD.
reboot-alarm	It means system will reset the PoE port and issue an alarm message via Syslog, SMTP.

Default:

N/A

Usage Guide:

To configure **PD Ping Alive Check Action** of **PoE** for specific interface

Example:

To configure **PD Ping Alive Check Action (Alarm)** of **PoE** for **GigabitEthernet X/X.**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **poe pdcheck action alarm**

4.2.65.76 poe pdcheck enable

Command:

poe pdcheck enable

poe Power Over Ethernet.

pdcheck Allows user to enable or disable per port PD Alive Check function.

enable PD alive check enable.

Default:

Disabled

Usage Guide:

To enable **PD Ping Alive Check** function of **PoE** for specific interface.

Example:

To enable **PD Ping Alive Check** function of **PoE** for **GigabitEthernet X/X.**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **poe pdcheck enable**

4.2.65.77 poe pdcheck interval

Command:

poe pdcheck interval <10-300>

poe Power Over Ethernet.

pdcheck Allows user to enable or disable per port PD Alive Check function.

interval set how long system should be issue a ping request to PD for detecting whether PD is alive or dead.

<10-300> interval <10~300>

Default:

30

Usage Guide:

To configure **PD Ping Alive Check** interval of **PoE** for specific interface.

Example:

To configure **PD Ping Alive Check** interval (100 seconds) of **PoE** for **GigabitEthernet X/X.**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **poe pdcheck interval 100**

4.2.65.78 poe pdcheck reboot-time

Command:

poe pdcheck reboot-time <30-180>

poe Power Over Ethernet.

pdcheck Allows user to enable or disable per port PD Alive Check function.

reboot-time set the PoE device rebooting time.

<30-180> reboot-time <30-180>

Default:

90

Usage Guide:

To configure **PD Ping Alive Check** rebooting time of **PoE** for specific interface.

Example:

To configure **PD Ping Alive Check** rebooting time (100 seconds) of **PoE** for **GigabitEthernet X/X.**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **poe pdcheck reboot-time 100**

4.2.65.79 poe pdcheck retry-count

Command:

poe pdcheck retry-count <1-5>

poe Power Over Ethernet.

pdcheck Allows user to enable or disable per port PD Alive Check function.

retry-count set how many times system retry ping to PD.

<1-5> retry-count <1-5>

Default:

2

Usage Guide:

To configure **PD Ping Alive Check** retry count of **PoE** for specific interface.

Example:

To configure **PD Ping Alive Check** retry count (5) of **PoE** for **GigabitEthernet X/X.**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **poe pdcheck retry-count 5**

4.2.65.80 poe power limit

Command:

poe power limit { <Power in watts>}

poe Power Over Ethernet.

power Setting maximum power for port in allocation mode.

limit The maximum power.

<Power in watts : option> Maximum power for the interface (0-15.4 Watt for PoE standard mode, 0-30.0 Watt for PoE plus mode)

Default:

2

Usage Guide:

To configure maximum power of **PoE** for specific interface.

Example:

To configure maximum power (29 watts) of **PoE** for **GigabitEthernet X/X**.

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # poe power limit 29
```

4.2.65.81 poe priority

Command:

```
poe priority { low | high | critical }
```

poe Power Over Ethernet.

priority Interface priority.

critical Set priority to critical.

high Set priority to high.

low Set priority to low.

Default:

2

Usage Guide:

To configure interface priority of **PoE** for specific interface.

Example:

To configure interface priority (low) of **PoE** for **GigabitEthernet X/X.**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # poe priority low
```

4.2.65.82 poe time-range

Command:

```
poe time-range { profile1 | profile2 | profile3 | profile4 }
```

poe Power Over Ethernet.

time-range To bind a PoE time-range to the corresponding port.

profile1 The profile name of the PoE time-range to be bound to the port.

profile2 The profile name of the PoE time-range to be bound to the port.

profile3 The profile name of the PoE time-range to be bound to the port.

profile4 The profile name of the PoE time-range to be bound to the port.

Default:

Profile 1

Usage Guide:

To configure time-range profile of **PoE** for specific interface.

Example:

To configure time-range profile (Profile 3) of **PoE** for **GigabitEthernet X/X.**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # poe time-range profile3
```

4.2.65.83 port-security

Command:

```
port-security
```

port-security Enable/disable port security per interface.

Default:

Disabled

Usage Guide:

To enable **Port-security** for specific interface

Example:

To enable **Port-security** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # port-security
```

4.2.65.84 port-security maximum

Command:

```
port-security maximum <Number of addresses : 1-1024>
```

port-security Enable/disable port security per interface.

maximum Maximum number of MAC addresses that can be learned on this set of interfaces.

<Number of addresses : 1-1024> Number of addresses

Default:

None

Usage Guide:

To configure number of **Port-security** addresses for specific interface

Example:

To configure 100 **Port-security** addresses for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **port-security maximum 100**

4.2.65.85 port-security violation

Command:

port-security violation [protect | shutdown | trap | trap-shutdown]

port-security Enable/disable port security per interface.

violation The action involved with exceeding the limit.

protect Don't do anything

shutdown Shut down the port

trap Send an SNMP trap

trap-shutdown Send an SNMP trap and shut down the port

Default:

None (Protected)

Usage Guide:

To configure protected mode of **Port-security** for specific interface

Example:

To configure protected mode **(trap-shutdown)** of **Port-security** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **port-security violation trap-shutdown**

4.2.65.86 port-security violation

Command:

port-security violation [protect | shutdown | trap | trap-shutdown]

port-security Enable/disable port security per interface.

violation The action involved with exceeding the limit.

protect Don't do anything

shutdown Shutdown the port

trap Send an SNMP trap

trap-shutdown Send an SNMP trap and shut down the port

Default:

None (Protected)

Usage Guide:

To configure protected mode of **Port-security** for specific interface

Example:

To configure protected mode **(trap-shutdown)** of **Port-security** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **port-security violation trap-shutdown**

4.2.65.87 pvlan

Command:

pvlan <range_list>

pvlan Private VLAN

<range_list> list of PVLANs. Range is from 1 to number of ports.

Default:

None

Usage Guide:

To create PVLAN ID for specific interface

Example:

To create PVLAN ID (5) for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # pvlan 5
```

4.2.65.88 pvlan isolation

Command:

```
pvlan isolation
```

pvlan Private VLAN

isolation Port isolation

Default:

None

Usage Guide:

To enable **PVLAN isolation** for specific interface

Example:

To enable **PVLAN isolation** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # pvlan isolation
```

4.2.65.89 qos cos

Command:

```
qos cos <Cos : 0-7>
```

qos Quality of Service

cos Class of service configuration

<Cos : 0-7> Specific class of service

Default:

0

Usage Guide:

To configure **CoS** of **QoS** for specific interface

Example:

To configure **CoS** (4) of **QoS** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # qos cos 4
```

4.2.65.90 qos dei

Command:

```
qos dei <Dei : 0-1>
```

qos	Quality of Service
dei	Drop Eligible Indicator configuration
<Dei : 0-1>	Specific Drop Eligible Indicator

Default:

0

Usage Guide:

To configure **DEI** of **QoS** for specific interface

Example:

To configure **DEI** (1) of **QoS** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # qos dei 1
```

4.2.65.91 qos dpl

Command:

```
qos dpl <Dei : 0-1>
```

qos	Quality of Service
dpl	Drop precedence level configuration
<Dpl : dpl>	Specific drop precedence level

Default:

0

Usage Guide:

To configure **DPL** of **QoS** for specific interface

Example:

To configure **DPL** (1) of **QoS** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **qos dpl 1**

4.2.65.92 qos dscp-classify

Command:

qos dscp-classify any | selected | zero

qos Quality of Service

dscp-classify DSCP ingress classification

any Classify to new DSCP always

selected Classify to new DSCP if classify is enabled for specific DSCP value in global dscp-classify map

zero Classify to new DSCP if DSCP is 0

Default:

Disabled

Usage Guide:

To configure **DSCP Classify** of **QoS** for specific interface

Example:

To configure **DSCP Classify** (Any) of **QoS** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **qos dscp-classify any**

4.2.65.93 qos dscp-remark

Command:

qos dscp-remark remap | rewrite

qos Quality of Service

dscp-remark DSCP egress remarking

remap Rewrite DSCP field using classified DSCP remapped through global dscp-egress-translation map

rewrite Rewrite DSCP field with classified DSCP value (no translation)

Default:

Disabled

Usage Guide:

To configure **DSCP egress remarking** of **QoS** for specific interface

Example:

To configure **DSCP egress remarking** (**Remap**) of **QoS** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **qos dscp-remark remap**

4.2.65.94 qos dscp-translate

Command:

qos dscp-translate

qos Quality of Service

dscp-translate DSCP ingress translation

Default:

Disabled

Usage Guide:

To configure **DSCP ingress translation** of **QoS** for specific interface

Example:

To configure **DSCP ingress translation** of **QoS** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **qos dscp-translate**

4.2.65.95 qos map cos-tag

Command:

qos map cos-tag cos <Cos : 0~7> dpl <Dpl : 0~1> pcp <Pcp : 0-7> dei <Dei : 0-1>

qos Quality of Service

map QoS Map/Table configuration

cos-tag Map for cos to tag configuration

cos Specify class of service

<Cos : 0~7> Specific class of service or range

dpl Specify drop precedence level

<Dpl : 0~1> Specific drop precedence level or range

pcp Specify PCP (Priority Code Point)

<Pcp : 0-7> Specific PCP

dei Specify DEI (Drop Eligible Indicator)

<Dei : 0-1> Specific DEI

Default:

Disabled

Usage Guide:

To configure **(QoS class, DP level) to (PCP, DEI) Mapping** of **QoS** for specific interface

Example:

To configure **(QoS class, DP level) to (PCP, DEI) Mapping** of **QoS** as below table for **GigabitEthernet X/X**

QoS class	DP level	PCP	DEI
1	1	6	0

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **qos map cos-tag cos 1 dpl 1 pcp 6 dei 0**

4.2.65.96 qos map tag-cos

Command:

qos map tag-cos pcp <Pcp : 0-7> dei <Dei : 0-1> cos <Cos : 0~7> dpl <Dpl : 0~1>

qos Quality of Service

map QoS Map/Table configuration

tag-cos Map for tag to cos configuration

pcp Specify PCP (Priority Code Point)

<Pcp : 0-7> Specific PCP

dei Specify DEI (Drop Eligible Indicator)

<Dei : 0-1> Specific DEI

cos Specify class of service

<Cos : 0~7> Specific class of service or range

dpl Specify drop precedence level

<Dpl : 0~1> Specific drop precedence level or range

Default:

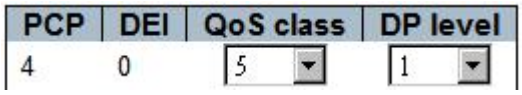
Disabled

Usage Guide:

To configure **(PCP, DEI) to (QoS class, DP level) Mapping** of **QoS** for specific interface

Example:

To configure **(PCP, DEI) to (QoS class, DP level) Mapping** of **QoS** as below table for **GigabitEthernet X/X**



Switch# configure terminal

Switch (config)# interface GigabitEthernet X/X

Switch (config-if) # **qos map tag-cos pcp 4 dei 0 cos 5 dpl 1**

4.2.65.97 qos pcp

Command:

qos pcp <Pcp : 0-7>

qos Quality of Service

pcp Priority Code Point configuration

<Pcp : 0-7> Specific Priority Code Point

Default:

0

Usage Guide:

To configure **PCP** of **QoS** for specific interface

Example:

To configure **PCP** (6) of **QoS** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **qos pcp 6**

4.2.65.98 qos policer

Command:

qos policer <Rate : 100-13200000>

qos Quality of Service

policer Policer configuration

<Rate : 100-13200000> Policer rate (default kbps)

Default:

0

Usage Guide:

To configure **Ingress Port Policers Rate** of **QoS** for specific interface

Example:

To configure **Ingress Port Policers Rate** (9999 Kbps) of **QoS** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **qos policer 9999**

4.2.65.99 qos queue-policer queue

Command:

qos queue-policer queue <Queue : 0~7> <Rate : 100-13200000>

qos Quality of Service

queue-policer Queue policer configuration

queue Specify queue

<Queue : 0~7> Specific queue or range

<Rate : 100-13200000> Policer rate in kbps

Default:

0

Usage Guide:

To configure **Ingress Queue Policers Rate** of **QoS** for specific interface

Example:

To configure **Ingress Queue** (4) **Policers Rate** (9999 Kbps) of **QoS** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **qos queue-policer queue 4 9999**

4.2.65.100 qos queue-shaper queue

Command:

qos queue-shaper queue <Queue : 0~7> <Rate : 100-13200000>

qos Quality of Service

queue-shaper Queue shaper configuration

queue Specify queue

<Queue : 0~7> Specific queue or range

<Rate : 100-13200000> Policer rate in kbps

Default:

0

Usage Guide:

To configure **Egress Queue Shapers Rate** of **QoS** for specific interface

Example:

To configure **Egress Queue** (4) **Shapers Rate** (9999 Kbps) of **QoS** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # qos queue-shaper queue 4 9999
```

4.2.65.101 qos shaper

Command:

```
qos shaper <Rate : 100-13200000>
```

qos Quality of Service

shaper Shaper configuration

<Rate : 100-13200000> Shaper rate in kbps

Default:

0

Usage Guide:

To configure **Egress Port Shapers Rate** of **QoS** for specific interface

Example:

To configure **Egress Port** (4) **Shapers Rate** (9999 Kbps) of **QoS** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # qos queue-shaper queue 4 9999
```

4.2.65.102 qos storm broadcast

Command:

```
qos storm broadcast <Rate : 100-13200000> [fps]
```

qos Quality of Service

storm Storm policer

broadcast Police broadcast frames

<Rate : 100-13200000> Policer rate (default kbps)

fps Rate is fps

Default:

500

Usage Guide:

To configure **Broadcast Frames Storm Control Rate** of **QoS** for specific interface

Example:

To configure **Broadcast Frames Storm Control Rate** (999 fps) of **QoS** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # qos storm broadcast 999 fps
```

4.2.65.103 qos storm unicast

Command:

```
qos storm unicast <Rate : 100-13200000> [fps]
```

qos Quality of Service

storm Storm policer

unicast Police unicast frames

<Rate : 100-13200000> Policer rate (default kbps)

fps Rate is fps

Default:

500

Usage Guide:

To configure **Unicast Frames Storm Control Rate** of **QoS** for specific interface

Example:

To configure **Unicast Frames Storm Control Rate** (999 Kbps) of **QoS** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # qos storm unicast 999
```

4.2.65.104 qos storm unknown

Command:

```
qos storm unknown <Rate : 100-13200000> [fps]
```

qos Quality of Service

storm Storm policer

unknown Police unknown (flooded) frames

<Rate : 100-13200000> Policer rate (default kbps)

fps Rate is fps

Default:

500

Usage Guide:

To configure **Unknown Frames Storm Control Rate** of **QoS** for specific interface

Example:

To configure **Unknown Frames Storm Control Rate** (999 fps) of **QoS** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # qos storm unicast 999 fps
```

4.2.65.105 qos tag-remark

Command:

```
qos tag-remark pcp <Pcp : 0-7> dei <Dei : 0-1>
```

qos Quality of Service

tag-remark Tag remarking configuration

pcp Specify default PCP

<Pcp : 0-7> Specific PCP

dei Specify default DEI

<Dei : 0-1> Specific DEI

Default:

0

Usage Guide:

To enable **Tag-remark default mode** of **QoS** for specific interface

Example:

To enable **Tag-remark default mode** (PCP:1 , DEI:1) of **QoS** for **GigabitEthernet X/X**

```
Switch# configure terminal
```

Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **qos tag-remark pcp 1 dei 1**

4.2.65.106 qos tag-remark mapped

Command:

qos tag-remark mapped

qos Quality of Service

tag-remark Tag remarking configuration

mapped Used mapped values (cos,dpl -> pcp,dei)

Default:

Classified

Usage Guide:

To enable **Tag-remark mapped mode** of **QoS** for specific interface

Example:

To enable **Tag-remark mapped mode** of **QoS** for **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **qos tag-remark mapped**

4.2.65.107 qos trust dscp

Command:

qos trust dscp

qos Quality of Service

trust Trust configuration

dscp DSCP value

Default:

Disabled

Usage Guide:

To enable **DSCP Classification** of **QoS** for specific interface

Example:

To enable **DSCP Classification** of **QoS** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **qos trust dscp**

4.2.65.108 qos trust tag

Command:

qos trust tag

qos Quality of Service

trust Trust configuration

tag VLAN tag

Default:

Disabled

Usage Guide:

To enable **VLAN tag Classification** of **QoS** for specific interface

Example:

To enable **VLAN tag Classification** of **QoS** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **qos trust tag**

4.2.65.109 rmon collection history

Command:

rmon collection history <1-65535> buckets <1-65535> interval <1-3600>

rmon Configure Remote Monitoring on an interface

collection Configure Remote Monitoring Collection on an interface

history Configure history

buckets Requested buckets of intervals. Default is 50 buckets

interval Interval to sample data for each bucket. Default is 1800 seconds

Default:

N/A

Usage Guide:

To configure **RMON History Configuration** for specific interface

Example:

To configure **RMON History Configuration** as below table for **GigabitEthernet X/X**

ID	Data Source	Interval	Buckets
1	.1.3.6.1.2.1.2.2.1.1.X	3	5

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **rmon collection history 1 buckets 5 interval 3**

4.2.65.110 rmon collection stats

Command:

rmon collection stats <1-65535>

rmon Configure Remote Monitoring on an interface

collection Configure Remote Monitoring Collection on an interface

stats Configure statistics

Default:

0

Usage Guide:

To configure **RMON Statistics Configuration** for specific interface

Example:

To configure **RMON Statistics Configuration (2)** as below table for **GigabitEthernet X/X**

ID	Data Source
2	.1.3.6.1.2.1.2.2.1.1.X

Switch# configure terminal

Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **rmon collection stats 2**

4.2.65.111 shutdown

Command:

shutdown

shutdown Shutdown of the interface.

Default:

No shutdown

Usage Guide:

To shut down specific interface

Example:

To shut down **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **shutdown**

4.2.65.112 spanning-tree

Command:

spanning-tree

spanning-tree Spanning Tree protocol

Default:

Disabled

Usage Guide:

To enable **STP** for specific interface

Example:

To enable **STP** for **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X

Switch (config-if) # **spanning-tree**

4.2.65.113 spanning-tree auto-edge

Command:

spanning-tree auto-edge

spanning-tree Spanning Tree protocol

auto-edge Auto detects edge status

Default:

Enabled

Usage Guide:

To enable **Auto Edge** of **CIST Normal Port Configuration** for specific interface

Example:

To enable **Auto Edge** of **CIST Normal Port Configuration** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **spanning-tree auto-edge**

4.2.65.114 spanning-tree bpdu-guard

Command:

spanning-tree bpdu-guard

spanning-tree Spanning Tree protocol

auto-edge Auto detects edge status

Default:

Disabled

Usage Guide:

To enable **BPDU Guard** of **CIST Normal Port Configuration** for specific interface

Example:

To enable **BPDU Guard** of **CIST Normal Port Configuration** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # spanning-tree bpdu-guard
```

4.2.65.115 spanning-tree edge

Command:

```
spanning-tree edge
```

spanning-tree Spanning Tree protocol

edge Edge port

Default:

Non-Edge

Usage Guide:

To enable **edge port** of **CIST Normal Port Configuration** for specific interface

Example:

To enable **edge port** of **CIST Normal Port Configuration** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # spanning-tree edge
```

4.2.65.116 spanning-tree link-type

Command:

```
spanning-tree link-type auto | point-to-point | shared
```

spanning-tree Spanning Tree protocol

link-type Port link-type

auto Auto detect

point-to-point Forced to point-to-point

shared Forced to Shared

Default:

Auto

Usage Guide:

To configure **point to point mode** of **CIST Normal Port Configuration** for specific interface

Example:

To enable **point to point mode** (shared) of **CIST Normal Port Configuration** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # spanning-tree edge
```

4.2.65.117 spanning-tree mst <Instance : 0-7> cost

Command:

```
spanning-tree mst <Instance : 0-7> cost <Cost : 1-200000000> | auto
```

spanning-tree Spanning Tree protocol

mst STP bridge instance

<Instance : 0-7> instance 0-7 (CIST=0, MST2=1...)

cost STP Cost of this port

<Cost : 1-200000000> Cost range

auto Use auto cost

Default:

Auto

Usage Guide:

To configure **Path Cost** of **CIST / MST Normal Port Configuration** for specific interface

Example:

To enable **Path Cost** (100) of **CIST / MST Normal Port Configuration** (CIST) for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # spanning-tree mst 0 cost 100
```

4.2.65.118 spanning-tree mst <Instance : 0-7> cost

Command:

```
spanning-tree mst <Instance : 0-7> port-priority <Prio : 0-240>
```

spanning-tree Spanning Tree protocol

mst STP bridge instance

<Instance : 0-7> instance 0-7 (CIST=0, MST2=1...)

port-priority STP priority of this port

<Prio : 0-240> Range (lower higher priority)

auto Use auto cost

Default:

Auto

Usage Guide:

To configure **Path Cost** of **CIST / MST Normal Port Configuration** for specific interface

Example:

To enable **Path Cost** (32) of **CIST / MST Normal Port Configuration** (CIST) for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **spanning-tree mst 0 port-priority 32**

4.2.65.119 spanning-tree restricted-role

Command:

spanning-tree restricted-role

spanning-tree Spanning Tree protocol

restricted-role Port role is restricted (never root port)

Default:

Disabled

Usage Guide:

To enable **Restricted-role** of **CIST Normal Port Configuration** for specific interface

Example:

To enable **Restricted-role** of **CIST Normal Port Configuration** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **spanning-tree restricted-role**

4.2.65.120 spanning-tree restricted-tcn

Command:

spanning-tree restricted-tcn

spanning-tree Spanning Tree protocol

restricted-tcn Restrict topology change notifications

Default:

Disabled

Usage Guide:

To enable **Restrict topology change notifications** of **CIST Normal Port Configuration** for specific interface

Example:

To enable **Restrict topology change notifications** of **CIST Normal Port Configuration** for **GigabitEthernet X/X**

Switch# configure terminal Switch (config)# interface GigabitEthernet X/X Switch (config-if) # **spanning-tree restricted-tcn**

4.2.65.121 speed

Command:

speed [10 | 100 | 1000 | 10g | auto]

speed Configures interface speed. If you use 10, 100, or 1000 keywords with the auto keyword the port will only advertise the specified speeds.

10 10Mbps

100 100Mbps

1000 1Gbps

10g 10Gbps

auto Auto negotiation

Default:

Auto

Usage Guide:

To configure line speed for specific interface

Example:

To configure line speed (1Gbps) for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # speed 1000
```

4.2.65.122 switchport access vlan

Command:

```
switchport access vlan <vlan_id>
```

switchport Switching mode characteristics

access Set access mode characteristics of the interface

vlan Set VLAN when interface is in access mode

<vlan_id> VLAN ID of the VLAN when this port is in access mode

Default:

1

Usage Guide:

To configure **access VLAN ID** for specific interface

Example:

To configure **access VLAN ID** (5) for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # switchport access vlan 5
```

4.2.65.123 switchport forbidden vlan add

Command:

```
switchport forbidden vlan add <vlan_list>
```

switchport Switching mode characteristics

forbidden Adds or removes forbidden VLANs from the current list of forbidden VLANs

vlan Add or modify VLAN entry in forbidden table.

add Add to existing list.

<vlan_list> VLAN IDs

Default:

1

Usage Guide:

To add **forbidden VLAN ID** for specific interface

Example:

To add **forbidden VLAN ID** (5) for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **switchport forbidden vlan add 5**

4.2.65.124 switchport forbidden vlan remove

Command:

switchport forbidden vlan remove <vlan_list>

switchport Switching mode characteristics

forbidden Adds or removes forbidden VLANs from the current list of forbidden VLANs

vlan Add or modify VLAN entry in forbidden table.

remove Remove from existing list.

<vlan_list> VLAN IDs

Default:

1

Usage Guide:

To remove **forbidden VLAN ID** for specific interface

Example:

To remove **forbidden VLAN ID** (5) for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **switchport forbidden vlan remove 5**

4.2.65.125 switchport hybrid acceptable-frame-type

Command:

switchport hybrid acceptable-frame-type all | tagged | untagged

switchport Switching mode characteristics

hybrid Change PVID for hybrid port

acceptable-frame-type Set acceptable frame type on a port.

all Allow all frames

tagged Allow only tagged frames

untagged Allow only untagged frames

Default:

All

Usage Guide:

To configure **acceptable-frame-type** of **Hybrid VLAN** for specific interface

Example:

To configure **acceptable-frame-type** (tagged) of **Hybrid VLAN** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **switchport hybrid acceptable-frame-type tagged**

4.2.65.126 switchport hybrid allowed vlan

Command:

switchport hybrid allowed vlan [all | none | add <vlan_list> | remove <vlan_list> | except <vlan_list>]

switchport Switching mode characteristics

hybrid Change PVID for hybrid port

allowed Set allowed VLAN characteristics when interface is in hybrid mode

<vlan_list> VLAN IDs of the allowed VLANs when this port is in hybrid mode

add Add VLANs to the current list

all All VLANs

except All VLANs except the following

none No VLANs

remove Remove VLANs from the current list

Default:

All

Usage Guide:

To configure **VLAN list** of **Hybrid VLAN** for specific interface

Example:

To configure **VLAN list** (None) of **Hybrid VLAN** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # switchport hybrid allowed vlan none
```

4.2.65.127 switchport hybrid egress-tag

Command:

```
switchport hybrid egress-tag [none | all | all except-native]
```

switchport Switching mode characteristics

hybrid Change PVID for hybrid port

egress-tag Egress VLAN tagging configuration

all Tag all frames

none No egress tagging

except-native Tag all frames except frames classified to native VLAN of the hybrid port

Default:

Untagged Port VLAN

Usage Guide:

To configure **Egress Tagging VLAN mode** for specific interface

Example:

To configure **Egress Tagging VLAN mode (None)** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # switchport hybrid egress-tag none
```

4.2.65.128 switchport hybrid ingress-filtering

Command:

switchport hybrid ingress-filtering

switchport Switching mode characteristics

hybrid Change PVID for hybrid port

ingress-filtering VLAN Ingress filter configuration

Default:

Enabled

Usage Guide:

To enable **Ingress-filtering** with **Hybrid VLAN mode** for specific interface

Example:

To enable **Ingress-filtering** with **Hybrid VLAN mode** for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **switchport hybrid ingress-filtering**

4.2.65.129 switchport hybrid native vlan

Command:

switchport hybrid native vlan <vlan_id>

switchport Switching mode characteristics

hybrid Change PVID for hybrid port

native Set native VLAN

vlan Set native VLAN when interface is in hybrid mode

<vlan_id> VLAN ID of the native VLAN when this port is in hybrid mode

Default:

1

Usage Guide:

To configure **PVID** in **Hybrid VLAN mode** for specific interface

Example:

To enable **PVID** (5) in **Hybrid VLAN mode** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # switchport hybrid native vlan 5
```

4.2.65.130 switchport hybrid port-type

Command:

```
switchport hybrid port-type c-port | s-custom-port | s-port | unaware
```

switchport Switching mode characteristics

hybrid Change PVID for hybrid port

port-type Set port type

c-port Customer port

s-custom-port Custom Provider port

s-port Provider port

unaware Port in not aware of VLAN tags.

Default:

C-port

Usage Guide:

To configure **Port type** in **Hybrid VLAN mode** for specific interface

Example:

To enable **Port type** (Unaware) in **Hybrid VLAN mode** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # switchport hybrid port-type unaware
```

4.2.65.131 Switchport mode

Command:

```
switchport mode c-port | s-custom-port | s-port | unaware
```

switchport Switching mode characteristics

mode Set mode of the interface

port-type Set port type

c-port Customer port

s-custom-port Custom Provider port

s-port Provider port

unaware Port in not aware of VLAN tags.

Default:

unaware

Usage Guide:

To configure **VLAN mode** for specific interface

Example:

To configure **VLAN mode** (trunk) for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **switchport mode trunk**

4.2.65.132 switchport vlan ip-subnet

Command:

switchport vlan ip-subnet id <1-128> <ipv4_subnet> vlan <vlan_id>

switchport Switching mode characteristics

vlan VLAN commands

ip-subnet VCL IP Subnet-based VLAN configuration.

id id keyword

<1-128> Unique VCE ID for each VCL entry (1-128)

<ipv4_subnet> Source IP address and mask (Format: xx.xx.xx.xx/mm.mm.mm.mm).

vlan vlan keyword

<vlan_id> VLAN ID required for the group to VLAN mapping (Range: 1-4095)

Default:

None

Usage Guide:

To configure **IP Subnet-based VLAN** for specific interface

Example:

To configure **IP Subnet-based VLAN** as below table for **GigabitEthernet X/X**

VCE ID	IP Address	Mask Length	VLAN ID
1	192.168.1.0	24	5

Switch# configure terminal

Switch (config)# interface GigabitEthernet X/X

Switch (config-if) # **switchport vlan ip-subnet id 1 192.168.1.0/255.255.255.0 vlan 5**

4.2.65.133 switchport vlan mac

Command:

switchport vlan mac <mac_ucast> vlan <vlan_id>

switchport Switching mode characteristics

vlan VLAN commands

mac MAC-based VLAN commands

<mac_ucast> 48 bit unicast MAC address: xx:xx:xx:xx:xx:xx

vlan vlan keyword

<vlan_id> VLAN ID required for the group to VLAN mapping (Range: 1-4095)

Default:

None

Usage Guide:

To configure **MAC-based VLAN** for specific interface

Example:

To configure **MAC-based VLAN** as below table for **GigabitEthernet X/X**

MAC Address	VLAN ID
00-55-44-33-22-11	5

Switch# configure terminal

Switch (config)# interface GigabitEthernet X/X

Switch (config-if) # **switchport vlan mac 00:55:44:33:22:11 vlan 5**

4.2.65.134 switchport vlan mapping

Command:

switchport vlan mapping <group id : 1-29>

switchport Switching mode characteristics

vlan VLAN commands

mapping Maps an interface to a VLAN translation group**.**

<group id : 1-29> Group id

Default:

None

Usage Guide:

To configure **Group mapping Table** for specific interface

Example:

To configure **Group mapping** (Group 25) for **GigabitEthernet X/X**

Switch# configure terminal

Switch (config)# interface GigabitEthernet X/X

Switch (config-if) # **switchport vlan mapping 25**

4.2.65.135 switchport vlan protocol group

Command:

switchport vlan protocol group <word16> vlan <vlan_id>

switchport Switching mode characteristics

vlan VLAN commands

protocol Protocol-based VLAN commands

group Protocol-based VLAN group commands

<word16> Group Name (Range: 1 - 16 characters)

vlan vlan keyword

<vlan_id> VLAN ID required for the group to VLAN mapping (Range: 1-4095)

Default:

None

Usage Guide:

To configure **VLAN protocol group** for specific interface

Example:

To configure **VLAN protocol group** as tabled below for **GigabitEthernet X/X**

Group Name	VLAN ID
8081	5

Switch# configure terminal

Switch (config)# interface GigabitEthernet X/X

Switch (config-if) # **switchport vlan protocol group 8081 vlan 5**

4.2.65.136 switchport voice vlan discovery-protocol

Command:

switchport voice vlan discovery-protocol both | lldp | oui

switchport Switching mode characteristics

voice Voice appliance attributes

vlan Vlan for voice traffic

discovery-protocol Set Voice VLAN port discovery protocol

both Detect telephony device by OUI address and LLDP

lldp Detect telephony device by LLDP

oui Detect telephony device by OUI address

Default:

OUI

Usage Guide:

To configure **Discovery-protocol** in **the Voice VLAN** for specific interface

Example: To configure **Discovery-protocol** (LLDP) in **the Voice VLAN** for **GigabitEthernet X/X**

Switch# configure terminal

Switch (config)# interface GigabitEthernet X/X

Switch (config-if) # **switchport voice vlan discovery-protocol lldp**

4.2.65.137 switchport voice vlan mode

Command:

switchport voice vlan mode auto | disable | force

switchport Switching mode characteristics

voice Voice appliance attributes

vlan Vlan for voice traffic

mode Set Voice VLAN port mode

auto Enable auto detect mode

disable disjoin Voice VLAN

force Force to join Voice VLAN

Default:

Disabled

Usage Guide:

To configure **Voice VLAN mode** for specific interface

Example:

To configure **Voice VLAN mode** (Auto) for **GigabitEthernet X/X**

Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # **switchport voice vlan mode auto**

4.2.65.138 switchport voice vlan security

Command:

switchport voice vlan security

switchport Switching mode characteristics

voice Voice appliance attributes

vlan Vlan for voice traffic

security Enable Voice VLAN port security mode

Default:

Disabled

Usage Guide:

To enable **Voice VLAN security** for specific interface

Example:

To enable **Voice VLAN security** for **GigabitEthernet X/X**

```
Switch# configure terminal
Switch (config)# interface GigabitEthernet X/X
Switch (config-if) # switchport voice vlan security
```

4.2.66 interface vlan

Command:

```
interface vlan <vlan_list>
```

vlan VLAN interface configurations

<vlan_list> List of VLAN interface numbers, 1~4095

Default:

N/A

Usage Guide:

To enter the **VLAN interface mode**.

Example:

To enter the **VLAN 1 interface mode**

```
Switch# configure terminal
Switch (config)# interface vlan 1
Switch (config-if-vlan)#
```

4.2.66.1 do

Command:

```
do < exec commands >
```

do To run exec commands in config mode

Default:

N/A

Usage Guide:

To run **exec commands** in **configure terminal mode**

Example:

To run "show aaa" in **configure terminal mode.**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# do show aaa
console : local
telnet  : local
ssh     : local
http    : local
```

4.2.66.2 end

Command:

```
end
```

end Go back to EXEC mode

Default:

Auto

Usage Guide:

To back to **EXEC mode**

Example:

To back to **EXEC mode**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# end
Switch#
```

4.2.66.3 exit

Command:

```
exit
```

exit Exit from current mode

Default:

None

Usage Guide:

To exit current mode

Example:

To exit current mode**.**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# exit
Switch (config)#
```

4.2.66.4 ip address

Command:

```
ip address <ipv4_addr> <ipv4_netmask>
```

ip Interface Internet Protocol config commands

address Address configuration

<ipv4_addr> IP address

<ipv4_netmask> IP netmask

Default:

None

Usage Guide:

To configure **IP address mode** for specific VLAN

Example:

To configure **IP address mode** (192.168.1.10/24) for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ip address 192.168.1.10 255.255.255.0
```

4.2.66.5 ip address dhcp

Command:

```
ip address dhcp
```

ip Interface Internet Protocol config commands

address Address configuration

dhcp Enable DHCP

Default:

None

Usage Guide:

To configure **IP address mode** for specific VLAN

Example:

To configure **IP address mode** (DHCP) for **VLAN X**

Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# **ip address dhcp**

4.2.66.6 ip address dhcp fallback

Command:

ip address dhcp fallback <ipv4_addr> <ipv4_netmask>

ip Interface Internet Protocol config commands

address Address configuration

dhcp Enable DHCP

<ipv4_addr> DHCP fallback address

<ipv4_netmask> DHCP fallback netmask

Default:

None

Usage Guide:

To configure **DHCP fallback IP address** for specific VLAN

Example:

To configure **DHCP fallback IP address** (192.168.1.10/24) for **VLAN X**

Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# **ip address dhcp fallback 192.168.1.10 255.255.255.0**

4.2.66.7 ip dhcp server

Command:

ip dhcp server

ip Interface Internet Protocol config commands

dhcp Configure DHCP server parameters

server Enable DHCP server per VLAN

Default:

None

Usage Guide:

To enable **IPv4 DHCP Server** for specific VLAN

Example:

To enable **IPv4 DHCP Server** for **VLAN X**

Switch# configure terminal Switch (config)# interface vlan X Switch (config-if-vlan)# **ip dhcp server**

4.2.66.8 ip igmp snooping

Command:

ip igmp snooping

ip Interface Internet Protocol config commands

igmp Internet Group Management Protocol

snooping Snooping IGMP

Default:

Disabled

Usage Guide:

To enable **IGMP snooping** for specific VLAN

Example:

To enable **IGMP snooping** for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ip igmp snooping
```

4.2.66.9 ip igmp snooping compatibility

Command:

```
ip igmp snooping compatibility auto | v1 | v2 | v3
```

ip Interface Internet Protocol config commands

igmp Internet Group Management Protocol

snooping Snooping IGMP

compatibility Interface compatibility

auto Compatible with IGMPv1/IGMPv2/IGMPv3

v1 Forced IGMPv1

v2 Forced IGMPv2

v3 Forced IGMPv3

Default:

Auto

Usage Guide:

To configure **IGMP snooping version** for specific VLAN

Example:

To configure **IGMP snooping V2** for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ip igmp snooping compatibility v2
```

4.2.66.10 ip igmp snooping last-member-query-interval

Command:

```
ip igmp snooping last-member-query-interval <lpmcLmqi : 0-31744>
```

ip Interface Internet Protocol config commands

igmp Internet Group Management Protocol

snooping Snooping IGMP

last-member-query-interval Last Member Query Interval in tenths of seconds

<lpmcLmqi : 0-31744> 0 - 31744 tenths of seconds

Default:

10

Usage Guide:

To configure **Last-member-query-interval of IGMP snooping** for specific VLAN

Example:

To configure **Last-member-query-interval** (100 seconds) **of IGMP snooping** for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ip igmp snooping last-member-query-interval 1000
```

4.2.66.11 ip igmp snooping priority

Command:

```
ip igmp snooping priority <CosPriority : 0-7>
```

ip Interface Internet Protocol config commands

igmp Internet Group Management Protocol

snooping Snooping IGMP

priority Interface CoS priority

<CosPriority : 0-7> CoS priority ranges from 0 to 7

Default:

0

Usage Guide:

To configure **CoS priority of IGMP snooping** for specific VLAN

Example:

To configure **CoS priority** (5) **of IGMP snooping** for **VLAN X**

```
Switch# configure terminal
```

```
Switch (config)# interface vlan X
Switch (config-if-vlan)# ip igmp snooping priority 5
```

4.2.66.12 ip igmp snooping querier address

Command:

```
ip igmp snooping querier address <ipv4_ucast>
```

ip Interface Internet Protocol config commands

igmp Internet Group Management Protocol

snooping Snooping IGMP

querier IGMP Querier configuration

address IGMP Querier address configuration

<ipv4_ucast> A valid IPv4 unicast address

Default:

0.0.0.0

Usage Guide:

To configure **Querier address of IGMP snooping** for specific VLAN

Example:

To configure **Querier address** (192.168.1.15) **of IGMP snooping** for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ip igmp snooping querier address 192.168.1.15
```

4.2.66.13 ip igmp snooping querier election

Command:

```
ip igmp snooping querier election
```

ip Interface Internet Protocol config commands

igmp Internet Group Management Protocol

snooping Snooping IGMP

querier IGMP Querier configuration

election Act as an IGMP Querier to join Querier-Election

Default:

Enabled

Usage Guide:

To enable **Querier-election of IGMP snooping** for specific VLAN

Example:

To enable **Querier-election of IGMP snooping** for **VLAN X**

Switch# configure terminal Switch (config)# interface vlan X Switch (config-if-vlan)# **ip igmp snooping querier election**

4.2.66.14 ip igmp snooping query-interval

Command:

ip igmp snooping query-interval <lpmcQi : 1-31744>

ip Interface Internet Protocol config commands

igmp Internet Group Management Protocol

snooping Snooping IGMP

query-interval Query Interval in seconds

<lpmcQi : 1-31744> 1 - 31744 seconds

Default:

125

Usage Guide:

To configure **Querier-interval of IGMP snooping** for specific VLAN

Example:

To configure **Querier-interval** (600 seconds) **of IGMP snooping** for **VLAN X**

Switch# configure terminal Switch (config)# interface vlan X Switch (config-if-vlan)# **ip igmp snooping query-interval 600**

4.2.66.15 ip igmp snooping query-max-response-time

Command:

ip igmp snooping query-max-response-time <lpmcQi : 1-31744>

ip Interface Internet Protocol config commands

igmp Internet Group Management Protocol

snooping Snooping IGMP

query-max-response-time Query Response Interval in tenths of seconds

<lpmcQri : 0-31744> 0 - 31744 tenths of seconds

Default:

125

Usage Guide:

To configure **Querier-interval of IGMP snooping** for specific VLAN

Example:

To configure **Querier-interval** (60 seconds) **of IGMP snooping** for **VLAN X**

Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# **ip igmp snooping query-max-response-time 600**

4.2.66.16 ip igmp snooping robustness-variable

Command:

ip igmp snooping robustness-variable <lpmcRv : 1-255>

ip Interface Internet Protocol config commands

igmp Internet Group Management Protocol

snooping Snooping IGMP

robustness-variable Robustness Variable

<lpmcRv : 1-255> Packet loss tolerance count from 1 to 255

Default:

2

Usage Guide:

To configure **Robustness Variable of IGMP snooping** for specific VLAN

Example:

To configure **Robustness Variable** (88) **of IGMP snooping** for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ip igmp snooping robustness-variable 88
```

4.2.66.17 ip igmp snooping unsolicited-report-interval

Command:

```
ip igmp snooping unsolicited-report-interval <lpmcUri : 0-31744>
```

ip Interface Internet Protocol config commands

igmp Internet Group Management Protocol

snooping Snooping IGMP

robustness-variable Robustness Variable

<lpmcUri : 0-31744> 0 - 31744 seconds

Default:

1

Usage Guide:

To configure **Unsolicited-Report-Interval of IGMP snooping** for specific VLAN

Example:

To configure **Unsolicited-Report-Interval** (99 seconds) **of IGMP snooping** for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ip igmp snooping unsolicited-report-interval 99
```

4.2.66.18 ipv6 address

Command:

```
Ipv6 address X:X:X:X::X/<0-128>
```

ipv6 IPv6 configuration commands

address Configure the IPv6 address of an interface

X:X:X:X::X/<0-128> IPv6 prefix x:x::y/z

Default:

None

Usage Guide:

To configure **IPv6 address** for specific VLAN

Example:

To configure **IPv6 address (2001::7788/64)** for **VLAN X**

Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# **ipv6 address 2001::7788/64**

4.2.66.19 ipv6 mld snooping

Command:

ipv6 mld snooping

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

Default:

Disabled

Usage Guide:

To enable **MLD snooping** for specific VLAN

Example:

To enable **MLD snooping** for **VLAN X**

Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# **ipv6 mld snooping**

4.2.66.20 ipv6 mld snooping compatibility

Command:

ipv6 mld snooping compatibility auto | v1 | v2

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

compatibility Interface compatibility

auto Compatible with MLDv1/MLDv2

v1 Forced MLDv1

v2 Forced MLDv2

Default:

Auto

Usage Guide:

To configure **MLD snooping version** for specific VLAN

Example:

To configure **MLD snooping V2** for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ipv6 mld snooping compatibility v2
```

4.2.66.21 ipv6 mld snooping last-member-query-interval

Command:

```
ipv6 mld snooping last-member-query-interval <lpmcLmqi : 0-31744>
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

last-member-query-interval Last Member Query Interval in tenths of seconds

<lpmcLmqi : 0-31744> 0 - 31744 tenths of seconds

Default:

10

Usage Guide:

To configure **Last-member-query-interval of MLD snooping** for specific VLAN

Example:

To configure **Last-member-query-interval** (100 seconds) **of MLD snooping** for **VLAN X**

```
Switch# configure terminal
```

```
Switch (config)# interface vlan X
Switch (config-if-vlan)# ipv6 mld snooping last-member-query-interval 1000
```

4.2.66.22 ipv6 mld snooping priority

Command:

```
ipv6 mld snooping priority <CosPriority : 0-7>
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

priority Interface CoS priority

<CosPriority : 0-7> CoS priority ranges from 0 to 7

Default:

0

Usage Guide:

To configure **CoS priority of MLD snooping** for specific VLAN

Example:

To configure **CoS priority** (5) **of MLD snooping** for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ipv6 mld snooping priority 5
```

4.2.66.23 ipv6 mld snooping querier election

Command:

```
ipv6 mld snooping querier election
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

querier MLD Querier configuration

election Act as an MLD Querier to join Querier-Election

Default:

Enabled

Usage Guide:

To enable **Querier-election of MLD snooping** for specific VLAN

Example:

To enable **Querier-election of MLD snooping** for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ipv6 mld snooping querier election
```

4.2.66.24 ipv6 mld snooping query-interval

Command:

```
ipv6 mld snooping query-interval <lpmcQi : 1-31744>
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

query-interval Query Interval in seconds

<lpmcQi : 1-31744> 1 - 31744 seconds

Default:

125

Usage Guide:

To configure **Querier-interval of MLD snooping** for specific VLAN

Example:

To configure **Querier-interval** (600 seconds) **of MLD snooping** for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ipv6 mld snooping query-interval 600
```

4.2.66.25 ipv6 mld snooping query-max-response-time

Command:

```
ipv6 mld snooping query-max-response-time <lpmcQi : 1-31744>
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

query-max-response-time Query Response Interval in tenths of seconds

<lpmcQri : 0-31744> 0 - 31744 tenths of seconds

Default:

125

Usage Guide:

To configure **Querier-interval of MLD snooping** for specific VLAN

Example:

To configure **Querier-interval** (60 seconds) **of MLD snooping** for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ipv6 mld snooping query-max-response-time 600
```

4.2.66.26 ipv6 mld snooping robustness-variable

Command:

```
ipv6 mld snooping robustness-variable <lpmcRv : 1-255>
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

robustness-variable Robustness Variable

<lpmcRv : 1-255> Packet loss tolerance count from 1 to 255

Default:

2

Usage Guide:

To configure **Robustness Variable of MLD snooping** for specific VLAN

Example:

To configure **Robustness Variable** (88) **of MLD snooping** for **VLAN X**

```
Switch# configure terminal
```

```
Switch (config)# interface vlan X
Switch (config-if-vlan)# ipv6 mld snooping robustness-variable 88
```

4.2.66.27 ipv6 mld snooping unsolicited-report-interval

Command:

```
ipv6 mld snooping unsolicited-report-interval <lpmcUri : 0-31744>
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

robustness-variable Robustness Variable

<lpmcUri : 0-31744> 0 - 31744 seconds

Default:

1

Usage Guide:

To configure **Unsolicited-Report-Interval of MLD snooping** for specific VLAN

Example:

To configure **Unsolicited-Report-Interval** (99 seconds) **of MLD snooping** for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# ipv6 mld snooping unsolicited-report-interval 99
```

4.2.66.28 no

Command:

```
no
```

no Negate a command or set its defaults

Default:

N/A

Usage Guide:

To default the function for specific interface

Example:

To disable the function (**ip address dhcp**) for **VLAN X**

```
Switch# configure terminal
Switch (config)# interface vlan X
Switch (config-if-vlan)# no ip address dhcp
```

4.2.67 ip arp inspection

Command:

```
ip arp inspection
```

ip Internet Protocol

arp Address Resolution Protocol

inspection ARP inspection

Default:

N/A

Usage Guide:

To enable **ARP inspection**

Example:

To enable **ARP inspection**

```
Switch# configure terminal
Switch (config)# ip arp inspection
```

4.2.68 ip arp inspection entry interface

Command:

```
ip arp inspection entry interface [10GigabitEthernet | GigabitEthernet] <vlan_id> <mac_ucast>
<ipv4_ucast>
```

ip Internet Protocol

arp Address Resolution Protocol

inspection ARP inspection

entry arp inspection entry

interface arp inspection entry interface config

GigabitEthernet 1 Gigabit Ethernet Port

10GigabitEthernet 10 Gigabit Ethernet Port

<vlan_id> Select a VLAN id to configure

<mac_ucast> Select a MAC address to configure

<ipv4_ucast> Select an IP Address to configure

Default:

N/A

Usage Guide:

To configure **Static ARP Inspection Table.**

Example:

To configure **Static ARP Inspection Table** as below table**.**

Port	VLAN ID	MAC Address	IP Address
1	1	00-11-22-33-44-55	192.168.0.18

Switch# configure terminal

Switch (config)# **ip arp inspection entry interface GigabitEthernet 1/1 1 00:11:22:33:44:55 192.168.0.18**

4.2.69 ip arp inspection translate

Command:

ip arp inspection translate

ip Internet Protocol

arp Address Resolution Protocol

inspection ARP inspection

translate arp inspection translate all entries

Default:

N/A

Usage Guide:

To translate dynamic entries into **static ARP inspection table.**

Example:

To translate dynamic entries into **static ARP inspection table.**

Switch# configure terminal

Switch (config)# **ip arp inspection translate**

ARP Inspection:

Translate 1 dynamic entries into static entries.

4.2.70 ip arp inspection translate interface

Command:

ip arp inspection translate interface [10GigabitEthernet | GigabitEthernet] <vlan_id> <mac_ucast> <ipv4_ucast>

ip Internet Protocol

arp Address Resolution Protocol

inspection ARP inspection

translate arp inspection translate all entries

interface arp inspection entry interface config

GigabitEthernet 1 Gigabit Ethernet Port

10GigabitEthernet 10 Gigabit Ethernet Port

<vlan_id> Select a VLAN id to configure

<mac_ucast> Select a MAC address to configure

<ipv4_ucast> Select an IP Address to configure

Default:

N/A

Usage Guide:

To translate dynamic entries into **static ARP inspection table** for specific interface**.**

Example:

To translate below dynamic entries into **static ARP inspection table** for **GigabitEthernet 1/1.**

Port	VLAN ID	MAC Address	IP Address
1	1	00-11-22-33-44-55	192.168.0.18

Switch# configure terminal

Switch (config)# **ip arp inspection translate interface GigabitEthernet 1/1 1 00:11:22:33:44:55 192.168.0.18**

4.2.71 ip arp inspection vlan

Command:

ip arp inspection vlan <vlan_list> logging all | deny | permit

ip Internet Protocol

arp Address Resolution Protocol

inspection ARP inspection

vlan arp inspection vlan setting

<vlan_list> arp inspection vlan list

logging ARP inspection vlan logging mode config

all log all entries

deny log denied entries

permit log permitted entries

Default:

N/A

Usage Guide:

To configure **VLAN mode** of **ARP inspection.**

Example:

To configure **VLAN mode** (VLAN 1, Log type: Permit) of **ARP inspection.**

Switch# configure terminal Switch (config)# **ip arp inspection vlan 1 logging permit**

4.2.72 ip dhcp excluded-address

Command:

ip dhcp excluded-address <A.B.C.D>

ip Internet Protocol

dhcp Dynamic Host Configuration Protocol

excluded-address Prevent DHCP from assigning certain addresses

<A.B.C.D> Low IP address

Default:

N/A

Usage Guide:

To configure **excluded IP range** of **DHCP Server.**

Example:

To configure **excluded IP range** (192.168.0.100~192.168.0.101) of **DHCP Server.**

```
Switch# configure terminal
Switch (config)# ip dhcp excluded-address 192.168.0.100 192.168.0.101
```

4.2.73 ip dhcp pool

Command:

```
ip dhcp pool <WORD>
```

ip	Internet Protocol
dhcp	Dynamic Host Configuration Protocol
pool	Configure DHCP address pools
<WORD>	Pool name in 32 characters

Default:

N/A

Usage Guide:

To create a **DHCP pool.**

Example:

To create a **DHCP pool (Name: fsbestswitch).**

```
Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)#
```

4.2.73.1 broadcast

Command:

```
broadcast <A.B.C.D>
```

broadcast	Broadcast address in use on the client's subnet
<A.B.C.D>	Broadcast IP address

Default:

None

Usage Guide:

To configure **Broadcast IP address (DHCP option 28)** of **DHCP Server**

Example:

To configure **Broadcast IP address** (192.168.0.66) of **DHCP Server** for **pool "**fsbestswitch**"**

```
Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# broadcast 192.168.0.66
```

4.2.73.2 client-identifier fqdn

Command:

```
client-identifier fqdn <LINE>
```

client-identifier Client identifier

fqdn FQDN type of client identifier

<LINE> FQDN in 128 characters

Default:

None

Usage Guide:

To configure **FQDN** of **DHCP Server**

Example:

To configure **FQDN** (123) of **DHCP Server** for **pool "**fsbestswitch**"**

```
Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# client-identifier fqdn 123
```

4.2.73.3 client-identifier mac-address

Command:

```
client-identifier mac-address <MAC>
```

client-identifier Client identifier

mac-address MAC address type of client identifier

<MAC> MAC address of client

Default:

None

Usage Guide:

To configure **Bind IP to MAC** of **DHCP Server**

Example:

To configure **Bind IP to MAC** (00:11:22:33:44:55) of **DHCP Server** for **pool "**fsbestswitch**"**

Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# **client-identifier mac-address 00:11:22:33:44:55**

4.2.73.4 client-name

Command:

client-name

client-name Client host name

Default:

None

Usage Guide:

To configure **Client-name** of **DHCP Server**

Example:

To configure **Client-name** (555) of **DHCP Server** for **pool "**fsbestswitch**"**

Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# **client-name 555**

4.2.73.5 default-router

Command:

default-router <A.B.C.D>

default-router Default routers

<A.B.C.D> Router's IP address

Default:

None

Usage Guide:

To configure **Default Gateway** of **DHCP Server**

Example:

To configure **Default Gateway** (192.168.0.1) of **DHCP Server** for **pool "**fsbestswitch**"**

```
Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# default-router 192.168.0.1
```

4.2.73.6 dns-server

Command:

```
dns-server <A.B.C.D>
```

dns-server DNS servers

<A.B.C.D> Server's IP address

Default:

None

Usage Guide:

To configure **DNS Server** of **DHCP Server**

Example:

To configure **DNS Server** (168.95.1.1, 8.8.8.8) of **DHCP Server** for **pool "**fsbestswitch**"**

```
Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# dns-server 168.95.1.1 8.8.8.8
```

4.2.73.7 do

Command:

do < exec commands >

do To run exec commands in config mode

Default:

N/A

Usage Guide:

To run **exec commands**

Example:

To run "show aaa"**.**

```
Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# do show aaa
console : local
telnet  : local
ssh     : local
http    : local
```

4.2.73.8 domain-name

Command:

domain-name <word128>

domain-name Domain name

<word128> Domain name

Default:

None

Usage Guide:

To configure **Domain Name** of **DHCP Server**

Example:

To configure **Domain Name** (fs.com) of **DHCP Server** for **pool "**fsbestswitch**"**

```
Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# domain-name fs.com
```

4.2.73.9 end

Command:

end

end Go back to EXEC mode

Default:

Auto

Usage Guide:

To back to **EXEC mode**

Example:

To back to **EXEC mode**

```
Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# end
Switch#
```

4.2.73.10 exit

Command:

exit

exit Exit from current mode

Default:

None

Usage Guide:

To exit current mode

Example:

To exit current mode**.**

```
Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# exit
```

Switch (config)#

4.2.73.11 hardware-address

Command:

hardware-address <MAC>

hardware-address Client hardware address

<MAC> Client MAC address

Default:

None

Usage Guide:

To configure **MAC address** of **DHCP Server** while the pool is in the **host** type.

Example:

To configure **MAC address** (00:11:22:33:44:55) of **DHCP Server** for **pool "**fsbestswitch**"** while the pool is in the **host** type.

Switch# configure terminal Switch (config)# ip dhcp pool fsbestswitch Switch (config-dhcp-pool)# **hardware-address 00:11:22:33:44:55**

4.2.73.12 host

Command:

host <IP: A.B.C.D> <Subnet: A.B.C.D>

host Client IP address and mask

<IP: A.B.C.D> Network number

<Subnet: A.B.C.D> Network mask in dotted-decimal notation, excluding 255.255.255.255

Default:

None

Usage Guide:

To configure **Host IP address** of **DHCP Server**.

Example:

To configure **Host IP address** (192.168.1.10/24) of **DHCP Server** for **pool "**fsbestswitch**"**.

```
Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# host 192.168.1.10 255.255.255.0
```

4.2.73.13 lease

Command:

```
lease <0-365> <0-23> <0-59> | infinite
```

lease Address lease time

<0-365> Days

<0-23> Hours

<0-59> Minutes

infinite Infinite lease

Default:

1 day

Usage Guide:

To configure **Lease Time** of **DHCP Server**.

Example:

To configure **Lease Time** (119 minutes) of **DHCP Server** for **pool "**fsbestswitch**".**

```
Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# lease 0 1 59
```

4.2.73.14 netbios-name-server

Command:

```
netbios-name-server <A.B.C.D>
```

netbios-name-server NetBIOS (WINS) name servers

<A.B.C.D> Server's IP address

Default:

None

Usage Guide:

To configure **NetBIOS Name Server** of **DHCP Server**.

Example:

To configure **NetBIOS Name Server** (192.168.1.10) of **DHCP Server** for **pool "**fsbestswitch**".**

Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# **netbios-name-server 192.168.1.10**

4.2.73.15 netbios-node-type

Command:

netbios-node-type b-node | h-node | m-node | p-node

netbios-node-type NetBIOS node type

b-node Broadcast node

h-node Hybrid node

m-node Mixed node

p-node Peer-to-peer node

Default:

None

Usage Guide:

To configure **NetBIOS node type** of **DHCP Server**.

Example:

To configure **NetBIOS node type** (B-node) of **DHCP Server** for **pool "**fsbestswitch**".**

Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# **netbios-node-type b-node**

4.2.73.16 netbios-scope

Command:

netbios-scope <LINE>

netbios-scope NetBIOS scope

<LINE> Netbios scope identifier, in 128 characters

Default:

None

Usage Guide:

To configure **NetBIOS scope** of **DHCP Server**.

Example:

To configure **NetBIOS scope** (fs) of **DHCP Server** for **pool "**fsbestswitch**".**

Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# **netbios-scope fs**

4.2.73.17 network

Command:

network <IP: A.B.C.D> <Subnet: A.B.C.D>

network Network number and mask

<IP: A.B.C.D> Network number

<Subnet: A.B.C.D> Network mask in dotted-decimal notation, excluding 255.255.255.255

Default:

None

Usage Guide:

To configure **Network IP address** of **DHCP Server**.

Example:

To configure **Network IP address** (192.168.1.11/24) of **DHCP Server** for **pool "**fsbestswitch**"**.

Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# **network 192.168.0.11 255.255.255.0**

4.2.73.18 nis-domain

4.2.73.19 -name

Command:

nis-domain-name <word128>

nis-domain-name NIS domain name

<word128> Domain name

Default:

None

Usage Guide:

To configure **NIS Domain Name** of **DHCP Server**

Example:

To configure **NIS Domain Name** (fs.com) of **DHCP Server** for **pool "**fsbestswitch**"**

Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# **nis-domain-name fs.com**

4.2.73.20 nis-server

Command:

nis-server <A.B.C.D>

nis-server Network information servers

<A.B.C.D> Server's IP address

Default:

None

Usage Guide:

To configure **NIS Server** of **DHCP Server**

Example:

To configure **NIS Server** (1.1.1.1) of **DHCP Server** for **pool "**fsbestswitch**"**

Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# **nis-server 1.1.1.1**

4.2.73.21 no

Command:

no

no Negate a command or set its defaults

Default:

N/A

Usage Guide:

To default the function

Example:

To disable the function (**nis-domain-name fs.com**) for **pool "**fsbestswitch**"**

Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# **no nis-domain-name fs.com**

4.2.73.22 ntp-server

Command:

ntp-server <A.B.C.D>

ntp-server NTP servers

<A.B.C.D> Server's IP address

Default:

None

Usage Guide:

To configure **NTP Server** of **DHCP Server**

Example:

To configure **NTP Server** (1.1.1.1) of **DHCP Server** for **pool "**fsbestswitch**"**

Switch# configure terminal
Switch (config)# ip dhcp pool fsbestswitch
Switch (config-dhcp-pool)# **ntp-server 1.1.1.1**

4.2.73.23 vendor

Command:

vendor class-identifier <"0x "> specific-info <HEX-VALUE>

vendor Vendor configuration

class-identifier Vendor class identifier

"<0x >" Class identifier in 64 characters

specific-info Vendor specific information

<HEX-VALUE> Hex values in 64 octets

Default:

None

Usage Guide:

To configure **Vendor ID** and **info** of **DHCP Server**

Example:

To configure **Vendor ID** and **info** as below table of **DHCP Server** for **pool "**fsbestswitch**"**

Vendor 1 Class Identifier	0x8
Vendor 1 Specific Information	0x08

Switch# configure terminal Switch (config)# ip dhcp pool fsbestswitch Switch (config-dhcp-pool)# **vendor class-identifier "0x8" specific-info 0x8**

4.2.74 ip dns proxy

Command:

ip dns proxy

ip Internet Protocol

dns Domain Name System

proxy DNS proxy service

Default:

Disabled

Usage Guide:

To enable **DNS proxy.**

Example:

To enable **DNS proxy.**

Switch# configure terminal Switch (config)# **ip dns proxy**

4.2.75 ip helper-address

Command:

ip helper-address <Ip : ipv4_ucast>

ip Internet Protocol

helper-address DHCP relay server

<Ip : ipv4_ucast> IP address of the DHCP relay server

Default:

None

Usage Guide:

To configure **IP address** of **DHCP**.

Example:

To configure **IP address** (1.1.1.1) of **DHCP**.

Switch# configure terminal Switch (config)# **ip helper-address 1.1.1.1**

4.2.76 ip http secure-redirect

Command:

ip http secure-redirect

ip Internet Protocol

http Hypertext Transfer Protocol

secure-redirect Secure HTTP web redirection

Default:

Disabled

Usage Guide:

To redirect **WebUI** from **HTTP** to **HTTPs**

Example:

To redirect **WebUI** from **HTTP** to **HTTPs**

```
Switch# configure terminal
Switch (config)# ip http secure-redirect
```

4.2.77 ip http secure-server

Command:

```
ip http secure-server
```

ip Internet Protocol

http Hypertext Transfer Protocol

secure-server Secure HTTP web server

Default:

Disabled

Usage Guide:

To enable **HTTPs WebUI.**

Example:

To enable **HTTPs WebUI.**

```
Switch# configure terminal
Switch (config)# ip http secure-server
```

4.2.78 ip igmp host-proxy

Command:

```
ip igmp host-proxy
```

ip Internet Protocol

igmp Internet Group Management Protocol

host-proxy IGMP proxy configuration

Default:

Disabled

Usage Guide:

To enable **IGMP Proxy**

Example:

To enable **IGMP Proxy.**

```
Switch# configure terminal
Switch (config)# ip igmp host-proxy
```

4.2.79 ip igmp host-proxy leave-proxy

Command:

```
ip igmp host-proxy leave-proxy
```

ip Internet Protocol

igmp Internet Group Management Protocol

host-proxy IGMP proxy configuration

leave-proxy IGMP proxy for leave configuration

Default:

Disabled

Usage Guide:

To enable **IGMP leave-proxy**

Example:

To enable **IGMP leave-proxy.**

```
Switch# configure terminal
Switch (config)# ip igmp host-proxy leave-proxy
```

4.2.80 ip igmp snooping

Command:

ip igmp snooping

ip Internet Protocol

igmp Internet Group Management Protocol

snooping Snooping IGMP

Default:

Disabled

Usage Guide:

To enable **IGMP Snooping.**

Example:

To enable **IGMP Snooping.**

Switch# configure terminal Switch (config)# **ip igmp snooping**

4.2.81 ip igmp snooping vlan

Command:

ip igmp snooping vlan <vlan_list>

ip Internet Protocol

igmp Internet Group Management Protocol

snooping Snooping IGMP

vlan IGMP VLAN

<vlan_list> VLAN identifier(s): VID

Default:

Disabled

Usage Guide:

To enable **IGMP Snooping for specific VLAN.**

Example:

To enable **IGMP Snooping for VLAN 1.**

```
Switch# configure terminal
Switch (config)# ip igmp snooping vlan 1
```

4.2.82 ip igmp ssm-range

Command:

```
ip igmp ssm-range <ipv4_mcast> <Ipv4PrefixLength : 4-32>
```

ip Internet Protocol

igmp Internet Group Management Protocol

ssm-range IPv4 address range of Source Specific Multicast

<ipv4_mcast> Valid IPv4 multicast address

<vlan_list> VLAN identifier(s): VID

<Ipv4PrefixLength : 4-32> Prefix length ranges from 4 to 32

Default:

232.0.0.0/8

Usage Guide:

To enable **SSM Range** of **IGMP.**

Example:

To enable **SSM Range** (239.239.239.239/32) of **IGMP.**

```
Switch# configure terminal
Switch (config)# ip igmp ssm-range 239.239.239.239 32
```

4.2.83 ip igmp unknown-flooding

Command:

```
ip igmp unknown-flooding
```

ip Internet Protocol

igmp Internet Group Management Protocol

unknown-flooding Flooding unregistered IPv4 multicast traffic

Default:

Enabled

Usage Guide:

To flood unregistered **IPv4 multicast** traffic**.**

Example:

To flood unregistered **IPv4 multicast** traffic**.**

```
Switch# configure terminal
Switch (config)# ip igmp unknown-flooding
```

4.2.84 ip name-server

Command:

```
ip name-server <ipv4_ucast>
```

ip Internet Protocol

name-server Domain Name System

<ipv4_ucast> A valid IPv4 unicast address

Default:

Enabled

Usage Guide:

To configure DNS server IP address**.**

Example:

To configure DNS server IP address (8.8.8.8)**.**

```
Switch# configure terminal
Switch (config)# ip name-server 8.8.8.8
```

4.2.85 ip name-server dhcp

Command:

```
ip name-server dhcp
```

ip Internet Protocol

name-server Domain Name System

dhcp Dynamic Host Configuration Protocol

Default:

None

Usage Guide:

To configure DNS IP address via DHCP Server**.**

Example:

To configure DNS IP address via DHCP Server**.**

```
Switch# configure terminal
Switch (config)# ip name-server 8.8.8.8
```

4.2.86 ip name-server dhcp interface vlan

Command:

```
ip name-server dhcp interface vlan <vlan_id>
```

ip Internet Protocol

name-server Domain Name System

dhcp Dynamic Host Configuration Protocol

vlan VLAN Interface

<vlan_id> VLAN identifier(s): VID

Default:

None

Usage Guide:

To configure DNS IP address via specific VLAN DHCP Server**.**

Example:

To configure DNS IP address via specific VLAN 5 DHCP Server**.**

```
Switch# configure terminal
Switch (config)# ip name-server dhcp interface vlan 5
```

4.2.87 ip route

Command:

```
ip route <ipv4_addr> <ipv4_netmask> <ipv4_gateway>
```

ip Internet Protocol

route Add IP route

<ipv4_addr> Network

<ipv4_netmask> Netmask

<ipv4_gateway> Gateway

Default:

None

Usage Guide:

To configure **static route**

Example:

To configure **static route** as **below table.**

Network	Mask Length	Gateway
192.168.1.0	24	192.168.0.1

```
Switch# configure terminal
Switch (config)# ip route 192.168.1.0 255.255.255.0 192.168.0.1
```

4.2.88 ip routing (Except for IES3110-16TF)

Command:

```
ip routing
```

ip Internet Protocol

routing Enable routing for IPv4 and IPv6

Default:

None

Usage Guide:

To enable **IP routing**

Example:

To enable **IP routing**

```
Switch# configure terminal
Switch (config)# ip routing
```

4.2.89 ip source binding interface

Command:

ip source binding interface 10GigabitEthernet | GigabitEthernet <port_type_id> <ipv4_ucast> <ipv4_netmask>

ip Internet Protocol

source source command

binding ip source binding

interface ip source binding entry interface config

<ipv4_ucast> Select an IP Address to configure

<ipv4_netmask> Select a subnet mask to configure

Default:

None

Usage Guide:

To enable **Static IP Source Guard Table** for **specific interface**

Example:

To enable **Static IP Source Guard Table as below table** for **GigabitEthernet 1/1**

Port	VLAN ID	IP Address	IP Mask
1	1	192.168.0.77	255.255.255.255

Switch# configure terminal Switch (config)# **ip source binding interface GigabitEthernet 1/1 1 192.168.0.77 255.255.255.255**

4.2.90 ip ssh

Command:

ip ssh

ip Internet Protocol

ssh Secure Shell

Default:

None

Usage Guide:

To enable **SSH service**

Example:

To enable **SSH service**

Switch# configure terminal Switch (config)# **ip ssh**

4.2.91 ip verify source

Command:

ip verify source

ip Internet Protocol

verify verify command

source verify source

Default:

Disabled

Usage Guide:

To enable **IP Source Guard**

Example:

To enable **IP Source Guard**

Switch# configure terminal Switch (config)# **ip verify source**

4.2.92 ip verify source translate

Command:

ip verify source translate

ip Internet Protocol

verify verify command

source verify source

translate ip verify source translate all entries

Default:

Disabled

Usage Guide:

To translate dynamic entries to **IP Source Guard table**

Example:

To translate dynamic entries to **IP Source Guard table**

```
Switch# configure terminal
Switch (config)# ip verify source translate
```

4.2.93 ipmc profile

Command:

```
ipmc profile
```

ipmc IPv4/IPv6 multicast configuration

profile IPMC profile configuration

Default:

Disabled

Usage Guide:

To enable **IPMC profile**

Example:

To enable **IPMC profile**

```
Switch# configure terminal
Switch (config)# ipmc profile
```

4.2.94 ipmc profile <word16>

Command:

```
ipmc profile <word16>
```

ipmc IPv4/IPv6 multicast configuration

profile IPMC profile configuration

<word16> Profile name

Default:

Disabled

Usage Guide:

To enter **IPMC profile mode**

Example:

To enter **IPMC profile mode** (fs)

```
Switch# configure terminal
Switch (config)# ipmc profile fs
Switch (config-ipmc-profile)#
```

4.2.94.1 default range

Command:

```
default range <EntryName : word16>
```

default Set a command to its defaults

range A range of IPv4/IPv6 multicast addresses for the profile

<EntryName : word16> Range entry name

Default:

None

Usage Guide:

To default **IPMC Profile Rule** for specific **IPMC Profile**

Example:

To default **IPMC Profile Rule** (Entry 1) for specific **IPMC Profile** (fs)

```
Switch# configure terminal
Switch (config)# ipmc profile fs
Switch (config-ipmc-profile)# default range 1
```

4.2.94.2 description

Command:

```
description <ProfileDesc : line64>
```

description Additional description about the profile

<ProfileDesc : line64> Description for the designated IPMC filtering profile

Default:

None

Usage Guide:

To configure description for specific **IPMC Profile**

Example:

To configure description (999) for specific **IPMC Profile** (fs)

```
Switch# configure terminal
Switch (config)# ipmc profile fs
Switch (config-ipmc-profile)# description 999
```

4.2.94.3 do

Command:

```
do < exec commands >
```

do To run exec commands in config mode

Default:

N/A

Usage Guide:

To run **exec commands**

Example:

To run "show aaa".

```
Switch# configure terminal
Switch (config)# ipmc profile fs
Switch (config-ipmc-profile)# do show aaa
console : local
telnet  : local
ssh     : local
http    : local
```

4.2.94.4 end

Command:

end

end Go back to EXEC mode

Default:

Auto

Usage Guide:

To back to **EXEC mode**

Example:

To back to **EXEC mode**

Switch# configure terminal Switch (config)# ipmc profile fs Switch (config-ipmc-profile)#**end** Switch#

4.2.94.5 exit

Command:

exit

exit Exit from current mode

Default:

None

Usage Guide:

To exit current mode

Example:

To exit current mode**.**

Switch# configure terminal Switch (config)# ipmc profile fs Switch (config-ipmc-profile)# **exit** Switch (config)#

4.2.94.6 no

Command:

no

no Negate a command or set its defaults

Default:

N/A

Usage Guide:

To default the function.

Example:

To enable the function (**description 999**).

Switch# configure terminal
Switch (config)# ipmc profile fs
Switch (config-ipmc-profile)# **no description 999**

4.2.94.7 range

Command:

range <EntryName : word16> deny | permit

description Additional description about the profile

<EntryName : word16> Range entry name

deny Deny matching addresses

permit Permit matching addresses

Default:

Deny

Usage Guide:

To configure **action** of **entry** for specific **IPMC Profile**

Example:

To configure **action** (permit) of **entry** (1) for specific **IPMC Profile** (fs)

```
Switch# configure terminal
Switch (config)# ipmc profile fs
Switch (config-ipmc-profile)# range 1 permit
```

4.2.95 ipv6 mld host-proxy

Command:

```
ipv6 mld host-proxy
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

host-proxy MLD proxy configuration

Default:

Disabled

Usage Guide:

To enable **MLD Proxy**

Example:

To enable **MLD Proxy.**

```
Switch# configure terminal
Switch (config)# ipv6 mld host-proxy
```

4.2.96 ipv6 mld host-proxy leave-proxy

Command:

```
ipv6 mld host-proxy leave-proxy
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

host-proxy MLD proxy configuration

leave-proxy MLD proxy for leave configuration

Default:

Disabled

Usage Guide:

To enable **MLD leave-proxy**

Example:

To enable **MLD leave-proxy.**

```
Switch# configure terminal
Switch (config)# ipv6 mld host-proxy leave-proxy
```

4.2.97 ipv6 mld snooping

Command:

```
ipv6 mld snooping
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

Default:

Disabled

Usage Guide:

To enable **MLD Snooping.**

Example:

To enable **MLD Snooping.**

```
Switch# configure terminal
Switch (config)# ipv6 mld snooping
```

4.2.98 ipv6 mld snooping vlan

Command:

```
ipv6 mld snooping vlan <vlan_list>
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

vlan MLD VLAN

<vlan_list> VLAN identifier(s): VID

Default:

Disabled

Usage Guide:

To enable **MLD Snooping for specific VLAN.**

Example:

To enable **MLD Snooping for VLAN 1.**

```
Switch# configure terminal
Switch (config)# ipv6 mld snooping vlan 1
```

4.2.99 ipv6 mld ssm-range

Command:

```
ipv6 mld ssm-range <ipv6_mcast> <Ipv6PrefixLength : 8-128>
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

ssm-range IPv6 address range of Source Specific Multicast

<ipv6_mcast> Valid IPv6 multicast address

<Ipv6PrefixLength : 8-128> Prefix length ranges from 8 to 128

Default:

ff3e:: /96

Usage Guide:

To enable **SSM Range** of **MLD.**

Example:

To enable **SSM Range** (ff3e::7788/128) of **MLD.**

```
Switch# configure terminal
Switch (config)# ipv6 mld ssm-range ff3e::7788 128
```

4.2.100 ipv6 mld unknown-flooding

Command:

```
ipv6 mld unknown-flooding
```

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

unknown-flooding Flooding unregistered IPv6 multicast traffic

Default:

Enabled

Usage Guide:

To flood unregistered **IPv6 multicast** traffic**.**

Example:

To flood unregistered **IPv6 multicast** traffic**.**

```
Switch# configure terminal
Switch (config)# ipv6 mld unknown-flooding
```

4.2.101 ipv6 route

Command:

```
Ipv6 route <X:X:X:X::X/<0-128>> {<X:X:X:X::X>, interface vlan <vlan_id> <FE80::X:X:X >}
```

ipv6 IPv6 configuration commands

route Add IP route

<X:X:X:X::X/<0-128>> IPv6 prefix x:x::y/z

<X:X:X:X::X> IPv6 unicast address (except link-local address) of next-hop

interface Select an interface to configure

vlan VLAN Interface

<vlan_id> VLAN identifier(s): VID

<FE80::X:X:X> IPv6 link-local address of next-hop

Default:

None

Usage Guide:

To configure **static route** for **IPv6**

Example 1:

To configure **static route** as **below table** for **IPv6.**

Network	Mask Length	Gateway	Next Hop VLAN
2001::7788	128	2002::1	0

```
Switch# configure terminal
Switch (config)# ipv6 route 2001::7788/128 2002::1
```

Example 2:

To configure **static route** as **below table** for **IPv6.**

Network	Mask Length	Gateway	Next Hop VLAN
2001::7788	128	fe80::1	1

```
Switch# configure terminal
Switch (config)# ipv6 route 2001::7788/128 interface vlan 1 fe80::1
```

4.2.102 lacp system-priority

Command:

```
lacp system-priority <1-65535>
```

lacp LACP settings

system-priority System priority

<1-65535> Priority value, lower means higher priority

Default:

32768

Usage Guide:

To configure **LACP system-priority.**

Example:

To configure **LACP system-priority** (99)**.**

```
Switch# configure terminal
Switch (config)# lacp system-priority 99
```

4.2.103 line

Command:

```
line { <0~16> | console 0 | vty <0~15> }
```

line Configure a terminal line

<0~16> List of line numbers

console Console terminal line

vty Virtual terminal

Default:

N/A

Usage Guide:

To enter **line mode**

Example:

To enter **line mode** (**vty 1**)

```
Switch# configure terminal
Switch (config)# line vty 1
Switch (config-line)#
```

4.2.103.1 do

Command:

```
do < exec commands >
```

do To run exec commands.

Default:

N/A

Usage Guide:

To run **exec commands.**

Example:

To run "show aaa"**.**

```
Switch# configure terminal
Switch (config)# line vty 1
Switch (config-line)# do show aaa
console : local
telnet  : local
ssh     : local
http    : local
```

4.2.103.2 editing

Command:

editing

editing Enable command line editing

Default:

Enabled

Usage Guide:

To allow user editing command line.

Example:

To allow user editing command line**.**

Switch# configure terminal Switch (config)# line vty 1 Switch (config-line)# **editing**

4.2.103.3 end

Command:

end

end Go back to EXEC mode

Default:

None

Usage Guide:

To back to **EXEC mode**

Example:

To back to **EXEC mode**

Switch# configure terminal Switch (config)# line vty 1 Switch (config-line)#**end** Switch#

4.2.103.4 exec-banner

Command:

exec-banner

exec-banner Enable the display of the EXEC banner

Default:

Enabled

Usage Guide:

To enable the display of the **EXEC banner**

Example:

To enable the display of the **EXEC banner**

Switch# configure terminal Switch (config)# line vty 1 Switch (config-line)# **exec-banner**

4.2.103.5 exec-timeout

Command:

exec-timeout <0-1440>

exec-timeout Set the EXEC timeout

<0-1440> Timeout in minutes

Default:

N/A

Usage Guide:

To configure **EXEC timeout**

Example:

To configure **EXEC timeout** (10 minutes)

Switch# configure terminal Switch (config)# line vty 1

Switch (config-line)# **exec-timeout 10**

4.2.103.6 exec-timeout

Command:

exec-timeout <0-1440>

exec-timeout Set the EXEC timeout

<0-1440> Timeout in minutes

Default:

N/A

Usage Guide:

To configure **EXEC timeout**

Example:

To configure **EXEC timeout** (10 minutes)

Switch# configure terminal Switch (config)# line vty 1 Switch (config-line)# **exec-timeout 10**

4.2.103.7 exit

Command:

exit

exit Exit from current mode

Default:

None

Usage Guide:

To exit current mode

Example:

To exit current mode**.**

Switch# configure terminal

```
Switch (config)# line vty 1
Switch (config-line)# exit
Switch (config)#
```

4.2.103.8 history size

Command:

```
history size <0-32>
```

history Control the command history function

size Set history buffer size

<0-32> Number of history commands, 0 means disable

Default:

None

Usage Guide:

To exit current mode

Example:

To exit current mode.

```
Switch# configure terminal
Switch (config)# line vty 1
Switch (config-line)# history size 1
```

4.2.103.9 length

Command:

```
length <0 or 3-512>
```

length Set number of lines on a screen

<0 or 3-512> Number of lines on screen (0 for no pausing)

Default:

None

Usage Guide:

To configure displayed lines on a screen.

Example:

To configure displayed lines on a screen.

```
Switch# configure terminal
Switch (config)# line vty 1
Switch (config-line)# length 10
```

4.2.103.10 location

Command:

```
location <LINE>
```

location Enter terminal location description

<LINE> One text line describing the terminal's location

Default:

None

Usage Guide:

To configure description of location.

Example:

To configure description (**taiwan**) of location.

```
Switch# configure terminal
Switch (config)# line vty 1
Switch (config-line)# location taiwan
```

4.2.103.11 motd-banner

Command:

```
motd-banner
```

motd-banner Enable the display of the MOTD banner

Default:

Enabled

Usage Guide:

To enable MOTD banner.

Example:

To enable MOTD banner..

```
Switch# configure terminal
Switch (config)# line vty 1
Switch (config-line)# motd-banner
```

4.2.103.12 no

Command:

```
no
```

no Negate a command or set its defaults

Default:

N/A

Usage Guide:

To default the function

Example:

To disable the function (**motd-banner**) for **vty 1**

```
Switch# configure terminal
Switch (config)# line vty 1
Switch (config-line)# no motd-banner
```

4.2.103.13 privilege level

Command:

```
privilege level <0-15>
```

privilege Change privilege level for line

level Assign default privilege level for line

<0-15> Default privilege level for line

Default:

15

Usage Guide:

To configure privilege level

Example:

To configure privilege level (5) for **vty 1.**

```
Switch# configure terminal
Switch (config)# line vty 1
Switch (config-line)# privilege level 5
```

4.2.103.14 width

Command:

```
width <0 or 40-512>
```

width Set width of the display terminal

<0 or 40-512> Number of characters on a screen line (0 for unlimited width)

Default:

0

Usage Guide:

To configure width of the display terminal.

Example:

To configure width (50) of the display terminal for **vty 1.**

```
Switch# configure terminal
Switch (config)# line vty 1
Switch (config-line)# width 50
```

4.2.104 lldp holdtime

Command:

```
lldp holdtime <2-10>
```

lldp LLDP configurations.

holdtime Sets LLDP hold time (The neighbor switch will discarded the LLDP information after "hold time" multiplied with "timer" seconds).

<2-10> 2-10 seconds

Default:

4

Usage Guide:

To enable **LLDP hold time**

Example:

To enable **LLDP hold time** (5)

Switch# configure terminal Switch (config)# **lldp holdtime 5**

4.2.105 lldp med datum

Command:

lldp med datum nad83-mllw | nad83-navd88 | wgs84

lldp	LLDP configurations.
med	Media Endpoint Discovery
datum	Datum (geodetic system) type
nad83-mllw	Mean lower low water datum 1983
nad83-navd88	North American vertical datum 1983
wgs84	World Geodetic System 1984

Default:

WGS84

Usage Guide:

To configure **Datum type** of **LLDP**

Example:

To configure **Datum type (nad83-mllw)** of **LLDP**

Switch# configure terminal Switch (config)# **lldp med datum nad83-mllw**

4.2.106 lldp med fast

Command:

lldp med fast <1-10>

lldp LLDP configurations.

med Media Endpoint Discovery

fast Number of times to repeat LLDP frame transmission at fast start.

Default:

4

Usage Guide:

To configure **frame transmission time** of **LLDP**

Example:

To configure **frame transmission time** (6) of **LLDP**

Switch# configure terminal

Switch (config)# **lldp med fast 6**

4.2.107 lldp med location-tlv altitude

Command:

lldp med location-tlv altitude [floors <Meters or floors>] | [meters <Meters or floors>]

lldp LLDP configurations.

med Media Endpoint Discovery

location-tlv LLDP-MED Location Type Length Value parameter

altitude Altitude parameter

floors Specify the altitude in floor.

<Meters or floors> Altitude value.

meters Specify the altitude in meters.

Default:

0

Usage Guide:

To configure **altitude** of **LLDP-MED**

Example:

To configure **altitude (Floors 5)** of **LLDP-MED**

Switch# configure terminal

Switch (config)# **lldp med location-tlv altitude floors 5**

4.2.108 lldp med location-tlv elin-addr

Command:

lldp med location-tlv elin-addr <ELIN number>

lldp LLDP configurations.

med Media Endpoint Discovery

location-tlv LLDP-MED Location Type Length Value parameter

elin-addr Emergency Location Identification Number, (e.g. E911 and others), such as defined by TIA or NENA.

<ELIN number> ELIN value

Default:

0

Usage Guide:

To configure **Emergency Location Identification Number** of **LLDP-MED**

Example:

To configure **Emergency Location Identification Number (911)** of **LLDP-MED**

Switch# configure terminal Switch (config)# **lldp med location-tlv elin-addr 911**

4.2.109 lldp med location-tlv latitude

Command:

lldp med location-tlv latitude north <Degrees> | south <Degrees>

lldp LLDP configurations.

med Media Endpoint Discovery

location-tlv LLDP-MED Location Type Length Value parameter

latitude Latitude parameter

north Setting latitude direction to north.

south Setting latitude direction to south

<Degrees> Latitude degrees (0.0000-90.0000)

Default:

North, 0

Usage Guide:

To configure **latitude direction** of **LLDP-MED**

Example:

To configure **latitude direction** (south, 5) of **LLDP-MED**

```
Switch# configure terminal
Switch (config)# lldp med location-tlv latitude south 5
```

4.2.110 lldp med location-tlv longitude

Command:

```
lldp med location-tlv longitude east <Degrees> | west <Degrees>
```

lldp LLDP configurations.

med Media Endpoint Discovery

location-tlv LLDP-MED Location Type Length Value parameter

longitude Longitude parameter

east Setting longitude direction to east.

west Setting longitude direction to west.

<Degrees> Longitude degrees (0.0000-180.0000)

Default:

North, 0

Usage Guide:

To configure **longitude direction** of **LLDP-MED**

Example:

To configure **longitude direction** (east, 5) of **LLDP-MED**

```
Switch# configure terminal
Switch (config)# lldp med location-tlv longitude east 5
```

4.2.111 lldp med media-vlan-policy

Command:

```
lldp med media-vlan-policy <Index : 0-31> {guest-voice | guest-voice-signaling  softphone-voice |
streaming-video | video-conferencing | video-signaling | voice | voice-signaling} {tagged | untagged}
<vlan_id> dscp <0-63> l2-priority <0-7>
```

lldp LLDP configurations.

med Media Endpoint Discovery

media-vlan-policy Use the media-vlan-policy to create a policy, which can be assigned to an interface.

<Index : 0-31> Policy id for the policy which is created.

guest-voice Create a guest voice policy.

guest-voice-signaling Create a guest voice signaling policy.

softphone-voice Create a softphone voice policy.

streaming-video Create a streaming video policy.

video-conferencing Create a video conferencing policy.

video-signaling Create a video signaling policy.

voice Create a voice policy.

voice-signaling Create a voice signaling policy.

tagged The policy uses tagged frames.

untagged The policy uses un-tagged frames.

<vlan_id> The VLAN the policy uses tagged frames.

dscp Differentiated Services Code Point.

<0-63> DSCP value 0-63

l2-priority Layer 2 priority.

<0-7> Priority 0-7

Default:

0

Usage Guide:

To configure **media-VLAN-policy** of **LLDP-MED**

Example:

To configure **media-VLAN-policy** as below table of **LLDP-MED**

Policy ID	Application Type	Tag	VLAN ID	L2 Priority	DSCP
1	Guest Voice	Tagged	1	5	45

Switch# configure terminal

Switch (config)# **lldp med media-vlan-policy 1 guest-voice tagged 1 dscp 45 l2-priority 5**

4.2.112 lldp reinit

Command:

lldp reinit <1-10>

lldp LLDP configurations.

reinit LLDP tx reinitialization delay in seconds

<1-10> 1-10 seconds.

Default:

2

Usage Guide:

To configure **Tx re-initialization delay time** of **LLDP**

Example:

To configure **Tx re-initialization delay time** (5) of **LLDP**

```
Switch# configure terminal
Switch (config)# lldp reinit 5
```

4.2.113 lldp timer

Command:

```
lldp timer <5-32768>
```

lldp LLDP configurations.

timer Sets LLDP TX interval (The time between each LLDP frame transmitted in seconds)

<5-32768> 5-32768 seconds.

Default:

30

Usage Guide:

To configure **Tx interval time** of **LLDP**

Example:

To configure **Tx interval time** (555) of **LLDP**

```
Switch# configure terminal
Switch (config)# lldp timer 555
```

4.2.114 lldp transmission-delay

Command:

lldp transmission-delay <1-8192>

lldp LLDP configurations.

transmission-delay Sets LLDP transmission-delay. LLDP transmission delay (the amount of time that the transmission of LLDP frames will delayed after LLDP configuration has changed) in seconds.)

<1-8192> 1-8192 seconds.

Default:

2

Usage Guide:

To configure **Tx transmission-delay time** of **LLDP**

Example:

To configure **Tx transmission-delay time** (88) of **LLDP**

Switch# configure terminal Switch (config)# **lldp transmission-delay 88**

4.2.115 logging host

Command:

**logging host <hostname>	<ipv4_ucast>**

logging Syslog

host host

<hostname> Domain name of the log server

<ipv4_ucast> IP address of the log server

Default:

0

Usage Guide:

To configure address of **log server**

Example:

To configure address of **log server**

Switch# configure terminal

```
Switch (config)# logging host 192.168.5.5
```

4.2.116 logging level

Command:

```
logging level error | info | warning
```

logging Syslog

level level

error Error

info Information

warning Warning

Default:

Info

Usage Guide:

To configure level of **log server**

Example:

To configure level of **log server**

```
Switch# configure terminal
Switch (config)# logging level error
```

4.2.117 logging on

Command:

```
logging on
```

logging Syslog

on Enable syslog server

Default:

Disabled

Usage Guide:

To enable **log server**

Example:

To enable **log server**

```
Switch# configure terminal
Switch (config)# logging on
```

4.2.118 loop-protect

Command:

```
loop-protect
```

loop-protect Loop protection configuration

Default:

Disabled

Usage Guide:

To enable **Loop Protection**

Example:

To enable **Loop Protection**

```
Switch# configure terminal
Switch (config)# loop-protect
```

4.2.119 loop-protect shutdown-time

Command:

```
loop-protect shutdown-time <0-604800>
```

loop-protect Loop protection configuration

shutdown-time Loop protection shutdown time interval

<0-604800> Shutdown time in second

Default:

180

Usage Guide:

To configure **shutdown time interval** of **Loop Protection**

Example:

To configure **shutdown time interval** (888) of **Loop Protection**

```
Switch# configure terminal
Switch (config)# loop-protect shutdown-time 888
```

4.2.120 loop-protect transmit-time

Command:

```
loop-protect transmit-time <0-10>
```

loop-protect Loop protection configuration

transmit-time Loop protection transmit time interval

<1-10> Transmit time in second

Default:

5

Usage Guide:

To configure **Transmission Time** of **Loop Protection**

Example:

To configure **Transmission Time** (8) of **Loop Protection**

```
Switch# configure terminal
Switch (config)# loop-protect transmit-time 8
```

4.2.121 mac address-table aging-time

Command:

```
mac address-table aging-time <0,10-1000000>
```

mac MAC table entries/configuration

address-table MAC table entries/configuration

<0,10-1000000> Aging time in seconds, 0 disables aging

Default:

300

Usage Guide:

To configure **Aging Time** of **MAC Address Table**

Example:

To configure **Aging Time** (888) of **MAC Address Table**

```
Switch# configure terminal
Switch (config)# mac address-table aging-time 888
```

4.2.122 mac address-table static

Command:

```
mac address-table static <mac_addr> vlan <vlan_id> interface * | 10GigabitEthernet
<port_type_list> | GigabitEthernet <port_type_list>
```

mac MAC table entries/configuration

address-table MAC table entries/configuration

static Static MAC address

<mac_addr> 48 bit MAC address: xx:xx:xx:xx:xx:xx

vlan VLAN keyword

<vlan_id> VLAN IDs 1-4095

interface Select an interface to configure

***** All switches or All ports

GigabitEthernet 1 Gigabit Ethernet Port

10GigabitEthernet 10 Gigabit Ethernet Port

Default:

300

Usage Guide:

To configure **Static MAC Address Table**

Example:

To configure **Static MAC Address Table** as below table

		Port Members																										
VLAN ID	MAC Address	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29
1	00-11-22-33-44-55	☑	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

```
Switch# configure terminal
Switch (config)# mac address-table static 00:11:22:33:44:55 vlan 1 interface GigabitEthernet 1/1
```

4.2.123 mep <Instance> ais

Command:

mep <Instance> ais [fr1m | fr1s] [protect]

mep Maintenance Entity Point

<Instance> The MEP instance number.

ais Alarm Indication Signal

fr1m Frame rate is 1 f/min.

fr1s Frame rate is 1 f/s**.**

protect The AIS can be used for protection. At the point of state change three AIS PDU is transmitted as fast as possible.

Default:

None

Usage Guide:

To configure **AIS** of **MEP**

Example:

To configure **AIS** of **MEP 1** as below table

Switch# configure terminal Switch (config)# **mep 1 ais fr1s**

4.2.124 mep <Instance> aps

Command:

mep <Instance> aps <prio> [multi | uni] { laps | { raps [octet <octet>] } }

mep Maintenance Entity Point

<Instance> The MEP instance number.

aps Automatic Protection Switching protocol

laps Linear Automatic Protection Switching protocol.

multi OAM PDU is transmitted with multicast MAC. Must me 'multi' in case of RAPS.

uni OAM PDU is transmitted with unicast MAC. The MAC is taken from peer MEP MAC database. Only possible in case of LAPS.

raps Ring Automatic Protection Switching protocol.

octet Then last OCTET in the multicast MAC. Only possible in case of RAPS.

<Octet : uint> Last OCTET value

uni OAM PDU is transmitted with unicast MAC. The MAC is taken from peer MEP MAC database. Only possible in case of LAPS.

Default:

None

Usage Guide:

To configure **APS** of **MEP**

Example:

To configure **APS** of **MEP 1** as below table

APS Protocol			
Priority	**Cast**	**Type**	**Last Octet**
7	Multi	L-APS	1

Switch# configure terminal

Switch (config)# **mep 1 aps 7 laps**

4.2.125 mep <Instance> cc

Command:

mep <Instance> cc <Prio : 0-7> fr100s | fr10s | fr1m | fr1s | fr300s | fr6h | fr6m

mep Maintenance Entity Point

<Instance> The MEP instance number.

cc Continuity Check

<Prio : 0-7> Priority in case of tagged OAM. In the EVC domain this is the COS-ID.

fr100s Frame rate is 100 f/s.

fr10s Frame rate is 10 f/s.

fr1m Frame rate is 1 f/min.

fr1s Frame rate is 1 f/s.

fr300s Frame rate is 300 f/s.

fr6h Frame rate is 6 f/hour.

fr6m Frame rate is 6 f/min.

Default:

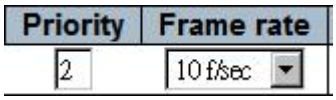
Priority	Frame rate
0	1 f/sec

Usage Guide:

To configure **CC** of **MEP**

Example:

To configure **CC** of **MEP 1** as below table



Switch# configure terminal Switch (config)# **mep 1 cc 2 fr10s**

4.2.126 mep <Instance> client domain

Command:

mep <Instance> client domain { evc | vlan }

mep Maintenance Entity Point

<Instance> The MEP instance number.

client Transport layer Client

evc EVC Domain.

vlan Vlan Domain

Default:

EVC

Usage Guide:

To configure **Client Domain** of **MEP**

Example:

To configure **Client Domain** (EVC) of **MEP 1**

Switch# configure terminal Switch (config)# **mep 1 client domain evc**

4.2.127 mep <Instance> client flow

Command: **mep <Instance> client flow <cflow> level <level> [ais-prio [<aisprio> | ais-highest]] [lck-prio [<lckprio> | lck-highest]]**

mep Maintenance Entity Point

<Instance> The MEP instance number.

level The MEG level on the client layer

<Level : 0-7> The MEG level value

ais-prio AIS injection priority

<Aisprio : 0-7> AIS injection priority value

ais-highest Request the highest possible AIS priority

lck-prio LCK injection priority

<Lckprio : 0-7> LCK injection priority value.

lck-highest Request the highest possible LCK priority.

Default:

0

Usage Guide:

To configure **Client Flow** of **MEP**

Example:

To configure **Client Flow** of **MEP 1** as below table**.**

Switch# configure terminal Switch (config)# **mep 1 client flow 5 level 4 ais-prio ais-highest lck-prio 3**

4.2.128 mep <Instance> dm

Command:

mep <Instance> dm <prio> [multi | { uni mep-id <mepid> }] [single | dual] [rdtrp | flow] interval <interval> last-n <lastn>

mep Maintenance Entity Point

<Instance> The MEP instance number.

dm Delay Measurement

<Prio : 0-7> Priority in case of tagged OAM. In the EVC domain this is the COS-ID

dual Delay Measurement based on 1DM PDU transmission.

flow The two way delay is calculated as round trip symmetrical flow delay. The far end residence time is subtracted.

interval Interval between PDU transmission in 10ms. Min value is 10.

<Interval : uint> Interval value

multi OAM PDU is transmitted with multicast MAC.

rdtrp The two way delay is calculated as round trip delay. The far end residence time is not subtracted.

single Delay Measurement based on DMM/DMR PDU.

uni OAM PDU is transmitted with unicast MAC. The MAC is taken from peer MEP MAC database.

mep-id Peer MEP-ID for unicast DM. The MAC is taken from peer MEP MAC database.

<Mepid : uint> Peer MEP-ID value

last-n The last N delays used for average last N calculation. Min value is 10.

<Lastn : uint> The last N value

Default:

0

Usage Guide:

To configure **Delay Measurement** of **MEP**

Example:

To configure **Delay Measurement** of **MEP 1** as below table**.**

Priority	Cast	Peer MEP	Way	Tx Mode	Calc	Gap	Count
5	Multi	0	Two-way	Standardize	Round trip	10	10

Switch# configure terminal

Switch (config)# **mep 1 dm 5 rdtrp interval 10 last-n 10**

4.2.129 mep <Instance> dm ns

Command:

mep <Instance> dm ns

mep Maintenance Entity Point

<Instance> The MEP instance number.

dm Delay Measurement

ns Nano Seconds

Default:

us

Usage Guide:

To configure **Delay Measurement** of **MEP**

Example:

To configure **Delay Measurement unit (ns)** of **MEP 1** as below table**.**

Priority	Cast	Peer MEP	Way	Tx Mode	Calc	Gap	Count
5	Multi	0	Two-way	Standardize	Round trip	10	10

Switch# configure terminal Switch (config)# **mep 1 dm ns**

4.2.130 mep <Instance> dm overflow-reset

Command:

mep <Instance> dm overflow-reset

mep Maintenance Entity Point

<Instance> The MEP instance number.

dm Delay Measurement

overflow-reset Reset all Delay Measurement results on total delay counter overflow.

Default:

Keep

Usage Guide:

To reset **Delay Measurement** of **MEP** while overflowing

Example:

To reset **Delay Measurement** of **MEP 1** while overflowing

Switch# configure terminal Switch (config)# **mep 1 dm overflow-reset**

4.2.131 mep <Instance> dm proprietary

Command:

mep <Instance> dm proprietary

mep Maintenance Entity Point

<Instance> The MEP instance number.

dm Delay Measurement

proprietary Proprietary Delay Measurement

Default:

Standard

Usage Guide:

To configure **Tx mode (proprietary)** of **MEP**.

Example:

To configure **Tx mode (proprietary)** of **MEP 1**

Switch# configure terminal Switch (config)# **mep 1 dm proprietary**

4.2.132 mep <Instance> dm synchronized

Command:

mep <Instance> dm synchronized

mep Maintenance Entity Point

<Instance> The MEP instance number.

dm Delay Measurement

synchronized Near end and far end is real time synchronized.

Default:

Enabled

Usage Guide:

To configure **Time Sync** of **MEP**.

Example:

To configure **Time Sync** of **MEP 1**

Switch# configure terminal Switch (config)# **mep 1 dm synchronized**

4.2.133 mep <Instance> down

Command:

mep <Instance> [mip] down domain { port | evc | vlan } [vid <vid>] flow <flow> level <level> interface <port_type> <port>

mep Maintenance Entity Point

mip This MEP instance is a half-MIP

<Instance> The MEP instance number.

down This MEP is a Down-MEP

domain The domain of the MEP

evc This MEP is a EVC domain MEP.

port This MEP is a Port domain MEP.

vlan This MEP is a VLAN domain MEP.

flow The flow instance that the MEP is related to.

<flow > The flow instance number when not in the port domain.

vid In case the MEP is a port Up-MEP or a EVC customer MIP the VID must be given.

<Vid : vlan_id> The port Domain MEP VID. This is required for a Port Up-MEP.

Default:

None

Usage Guide:

To configure **Down-MEP** of **MEP**.

Example:

To configure **Down-MEP** of **MEP 1** as below table

Instance	Domain	Mode	Direction	Residence Port	Level	Flow Instance	Tagged VID
1	Port	Mep	Down	1	0	1	0

Switch# configure terminal

Switch (config)# **mep 1 down domain port flow 1 level 0 interface GigabitEthernet 1/1**

4.2.134 mep <Instance> lb

Command:

mep <Instance> lb <prio> [dei] [multi | { uni { { mep-id <mepid> } | { mac <mac> } } }] count <count> size <size> interval <interval>

mep Maintenance Entity Point

<Instance> The MEP instance number.

lb Loop Back

<Prio : 0-7> Priority in case of tagged OAM. In the EVC domain this is the COS-ID.

count The number of LBM PDU to send in one loop test. The value 0 indicate infinite transmission (test behavior). This is HW based LBM/LBR and Requires VOE.

<Count : uint> Number of LBM PDU to send value

size The number of bytes in the LBM PDU Data Pattern TLV

<size> The LBM frame size. This is entered as the wanted size (in bytes) of a un-tagged frame containing LBM OAM PDU - including CRC (four bytes). Example when 'Size' = 64 => Un-tagged frame size = DMAC(6) + SMAC(6) + TYPE(2) + LBM PDU LENGTH(46) + CRC(4) = 64

interval The number of bytes in the LBM PDU Data Pattern TLV

<interval> The interval between transmitting LBM PDU. in case 'count' != 0 this is in 10ms and max is 100. In case 'count' == 0 this is in 1us and max is 10.000.

dei Drop Eligible Indicator in case of tagged OAM**.**

multi OAM PDU is transmitted with multicast MAC.

uni OAM PDU is transmitted with unicast MAC. The MAC is taken from peer MEP MAC database.

mac Loop Back unicast MAC to be used in case of LB against MIP.

<Mac : mac_addr> Loop Back target unicast MAC value

mep-id Peer MEP-ID for unicast LB. The MAC is taken from peer MEP MAC database.

<Mepid : uint> Peer MEP-ID value

Default:

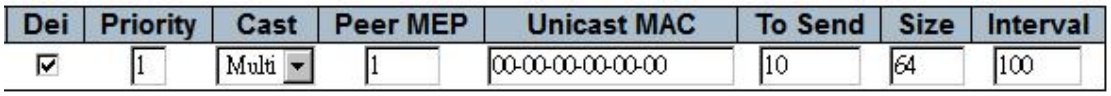
None

Usage Guide:

To configure **Loop Back** of **MEP**.

Example:

To configure **Loop Back** of **MEP 2** as below table



Switch# configure terminal

Switch (config)# **mep 2 lb 1 dei count 10 size 64 interval 100**

4.2.135 mep <Instance> lck

Command:

mep <Instance> lck fr1m | fr1s

mep Maintenance Entity Point

<Instance> The MEP instance number.

lck Locked Signal

fr1m Frame rate is 1 f/min.

fr1s Frame rate is 1 f/s.

Default:

1 frame/sec

Usage Guide:

To configure **Locked Frame Rate** of **MEP**.

Example:

To configure **Locked Frame Rate (**1 frame/sec**)** of **MEP 2**.

```
Switch# configure terminal
Switch (config)# mep 2 lck
Switch (config)# mep 2 lck fr1s
```

4.2.136 mep <Instance> level

Command:

```
mep <Instance> level <Level : 0-7>
```

mep Maintenance Entity Point

<Instance> The MEP instance number.

level The MEG level of the MEP

<Level : 0-7> The MEG level value

Default:

0

Usage Guide:

To configure **MEG level** of **MEP**.

Example:

To configure **MEG level (**2**)** of **MEP 2**.

```
Switch# configure terminal
Switch (config)# mep 2 level 2
```

4.2.137 mep <Instance> lm

Command:

mep <Instance> lm <prio> [multi | uni] [single | dual] [fr10s | fr1s | fr6m | fr1m | fr6h] [flr <flr>]

mep Maintenance Entity Point

<Instance> The MEP instance number.

lm Loss Measurement

<Prio : 0-7> Priority in case of tagged OAM. In the EVC domain this is the COS-ID.

fr10s Frame rate is 10 f/s.

fr1m Frame rate is 1 f/min.

fr1s Frame rate is 1 f/s.

fr6h Frame rate is 6 f/hour.

fr6m Frame rate is 6 f/min.

dual Dual ended LM is based on CCM PDU.

single Single ended LM is based on LMM/LMR PDU.

multi OAM PDU is transmitted with multicast MAC.

uni OAM PDU is transmitted with unicast MAC. The MAC is taken from peer MEP MAC database. In case of LM there is only one peer MEP.

flr The Frame Loss Ratio interval.

<Flr : uint> The Frame Loss Ratio interval value.

Default:

Priority	Frame rate	Cast	Ended	FLR Interval
0	1 f/sec	Multi	Single	5

Usage Guide:

To configure **Loss Measurement** of **MEP**.

Example:

To configure **Loss Measurement** of **MEP 2** as below table

Priority	Frame rate	Cast	Ended	FLR Interval
5	1 f/sec	Uni	Single	4

Switch# configure terminal

Switch (config)# **mep 2 lm 5 uni flr 4**

4.2.138 mep <Instance> lt

Command:

mep <Instance> lt <prio> { { mep-id <mepid> } | { mac <mac> } } ttl <ttl>

mep Maintenance Entity Point

<Instance> The MEP instance number.

lt Link Trace

<Prio : 0-7> Priority in case of tagged OAM. In the EVC domain this is the COS-ID.

mac Link Trace target unicast MAC to be used in case of LT against MIP.

<Mac : mac_addr> Link Trace target unicast MAC value.

mep-id Peer MEP-ID for Link Trace target unicast MAC. The MAC is taken from peer MEP MAC database.

<Mepid : uint> Peer MEP-ID value.

ttl Time To Live.

<Ttl : uint> Time To Live value

Default:

Priority	Peer MEP	Unicast MAC	Time To Live
0	1	00-00-00-00-00-00	1

Usage Guide:

To configure **Link Trace** of **MEP**.

Example:

To configure **Link Trace** of **MEP 1** as below table

Priority	Peer MEP	Unicast MAC	Time To Live
4	0	11-3A-15-A3-53-44	5

Switch# configure terminal Switch (config)# **mep 1 lt 4 mac 11-3A-15-A3-53-44**

4.2.139 mep <Instance> meg-id

Command:

mep <Instance> meg-id <megid> { itu | itu-cc | { ieee [name <name>] } }

mep Maintenance Entity Point

<Instance> The MEP instance number.

meg-id The ITU/IEEE MEG-ID

<Megid : word> The MEG-ID string. This is either the ITU MEG-ID or the IEEE Short MA, depending on the selected MEG-ID format.

The ITU max. is 13 characters. The ITU-CC max. is 15 characters. The IEEE max. is 16 characters..

ieee The MEG-ID (Short MA Name) has IEEE Character String format. The meg-id max. is 16 characters.

itu The MEG-ID has ITU format (ICC - UMC). The meg-id max. is 13 characters.

itu-cc The MEG-ID has ITU Country Code format (CC - ICC - UMC). The meg-id max. is 15 characters

name Only relevant for IEEE. The MAID is with Maintenance Domain Name

<Name : word> Maintenance Domain Name string. The max is 16 characters

Default:

Format	Domain Name	MEG id	MEP id
ITU ICC		ICC000MEG0000	1

Usage Guide:

To configure **MEG-ID** of **MEP**.

Example:

To configure **MEG-ID** of **MEP 1** as below table

Format	Domain Name	MEG id	MEP id
IEEE String	planet.com	ICC000MEG0000	1

Switch# configure terminal

Switch (config)# **mep 1 meg-id ICC000MEG0000 ieee name fs.com**

4.2.140 mep <Instance> mep-id

Command:

mep <Instance> mep-id <mepid>

mep Maintenance Entity Point

<Instance> The MEP instance number.

mep-id The MEP-ID

<Mepid : uint> The MEP-ID value.

Default:

None

Usage Guide:

To configure **MEP-ID** of **MEP**.

Example:

To configure **MEP-ID** (5) of **MEP 1**.

```
Switch# configure terminal
Switch (config)# mep 1 mep-id 5
```

4.2.141 mep <Instance> peer-mep-id

Command:

```
mep <Instance> peer-mep-id <mepid> [ mac <mac> ]
```

mep Maintenance Entity Point

<Instance> The MEP instance number.

peer-mep-id The peer MEP-ID

<Mepid : uint> The peer MEP-ID value

mac The peer MAC. this will be overwritten by any learned MAC – through CCM reception.

<Mac : mac_addr> The peer MAC string

Default:

None

Usage Guide:

To configure **Peer MEP-ID** of **MEP**.

Example:

To configure **Peer MEP-ID** of **MEP 1** as below table

Peer MEP ID	Unicast Peer MAC
0	11-3A-05-A1-53-11

```
Switch# configure terminal
Switch (config)# mep 1 peer-mep-id 0 mac 11-3A-05-A1-53-11
```

4.2.142 mep <Instance> performance-monitoring

Command:

```
mep <Instance> performance-monitoring
```

mep Maintenance Entity Point

<Instance> The MEP instance number.

performance-monitoring Performance monitoring Data Set collection (MEF35)

Default:

Disabled

Usage Guide:

To enable **Performance Monitoring** of **MEP**.

Example:

To enable **Performance Monitoring** of **MEP 1**

```
Switch# configure terminal
Switch (config)# mep 1 performance-monitoring
```

4.2.143 mep <Instance> tst

Command:

```
mep <Instance> tst <prio> [ dei ] mep-id <mepid> [ sequence ] [ all-zero | all-one | one-zero ] rate
<rate> size <size>
```

mep Maintenance Entity Point

<Instance> The MEP instance number.

tst Test Signal

<Prio : 0-7> Priority in case of tagged OAM. In the EVC domain this is the COS-ID.

dei Drop Eligible Indicator in case of tagged OAM.

mep-id Peer MEP-ID for unicast TST. The MAC is taken from peer MEP MAC database.

<Mepid : uint> Peer MEP-ID value

sequence Enable sequence number in TST PDU

all-one Test pattern is set to all one.

all-zero Test pattern is set to all zero.

one-zero Test pattern is set to 10101010.

rate The TST frame transmission bit rate - in Mega bits pr. second. Limit on Caracal is 400 Mbps. Limit on Serval is 1Gbps. This is the bit rate of a standard frame without any encapsulation. If 1 Mbps rate is selected in a EVC MEP, the added tag will give a hi

<Rate : uint> Transmission rate value

size The TST frame size. This is entered as the wanted size (in bytes) of a un-tagged frame containing TST OAM PDU - including CRC (four bytes). Example when 'Size' = 64 => Un-tagged frame size = DMAC(6) + SMAC(6) + TYPE(2) + TST PDU LENGTH(46) + CRC(4) = 64

<Size : uint> Frame size value

Default:

Dei	Priority	Peer MEP	Rate	Size	Pattern	Sequence Number
☐	0	1	1	64	All Zero	☐

Usage Guide:

To enable **Test Signal** of **MEP**.

Example:

To enable **Test Signal** of **MEP 1** as below table

Dei	Priority	Peer MEP	Rate	Size	Pattern	Sequence Number
☑	3	2	10	68	10101010	☑

Switch# configure terminal

Switch (config)# **mep 1 tst 3 dei mep-id 2 sequence one-zero rate 10 size 68**

4.2.144 mep <Instance> up

Command:

mep <Instance> [mip] up domain { port | evc | vlan } [vid <vid>] flow <flow> level <level> interface <port_type> <port>

mep Maintenance Entity Point

<Instance> The MEP instance number.

mip This MEP instance is a half-MIP

up This MEP is a Up-MEP

domain The domain of the MEP

evc This MEP is a EVC domain MEP.

port This MEP is a Port domain MEP.

vlan This MEP is a VLAN domain MEP.

flow The flow instance that the MEP is related to.

<flow > The flow instance number when not in the port domain.

vid In case the MEP is a port Up-MEP or a EVC customer MIP the VID must be given.

<Vid : vlan_id> The port Domain MEP VID. This is required for a Port Up-MEP.

Default:

None

Usage Guide:

To configure **Up-MEP** of **MEP**.

Example:

To configure **Up-MEP** of **MEP 2** as below table

Instance	Domain	Mode	Direction	Residence Port	Level	Flow Instance	Tagged VID
2	Port	Mep	Up	1	2	1	1

Switch# configure terminal

Switch (config)# **mep 2 up domain port vid 1 flow 1 level 2 interface GigabitEthernet 1/1**

4.2.145 mep <Instance> vid

Command:

mep <Instance> vid <vid>

mep Maintenance Entity Point

<Instance> The MEP instance number.

vid The MEP VID

<Vid : vlan_id> The MEP VID value

Default:

0

Usage Guide:

To set **VID** of **MEP**.

Example:

To set **VID** (8) of **MEP 1**.

Switch# configure terminal

Switch (config)# **mep 1 vid 8**

4.2.146 mep <Instance> voe

Command:

mep <Instance> voe

mep Maintenance Entity Point

<Instance> The MEP instance number.

voe MEP is VOE based

Default:

0

Usage Guide:

To set **VOE** of **MEP**.

Example:

To set **VOE** (8) of **MEP 1**

Switch# configure terminal Switch (config)# **mep 1 voe**

4.2.147 monitor destination

Command:

monitor destination interface 10GigabitEthernet <port_type_list> | GigabitEthernet <port_type_list>

monitor Set monitor configuration

destination The destination port. That is the port that trafficked should be mirrored to

Default:

Disabled

Usage Guide:

To configure **Mirroring Port**

Example:

To set **Mirroring Port** (**GigabitEthernet 1/2**)

Switch# configure terminal Switch (config)# **monitor destination interface GigabitEthernet 1/2**

4.2.148 monitor source

Command:

monitor source interface * | 10GigabitEthernet <port_type_list> | GigabitEthernet <port_type_list> { both | rx | tx }

monitor Set monitor configuration

source The source port(s). That is the ports to be mirrored to the destination port.

Default:

Disabled

Usage Guide:

To configure **Mirrored Port**

Example:

To set **Mirrored Port** (**GigabitEthernet 1/1, Tx + Rx**)

Switch# configure terminal Switch (config)# **monitor source interface GigabitEthernet 1/1 both**

4.2.149 mvr

Command:

mvr

mvr Multicast VLAN Registration configuration

Default:

Disabled

Usage Guide:

To enable **MVR**

Example:

To enable **MVR**

Switch# configure terminal Switch (config)# **mvr**

4.2.150 mvr name <mvr_name> channel

Command:

mvr name <mvr_name> channel <ProfileName : word16>

mvr Multicast VLAN Registration configuration

name MVR multicast name

<MvrName : word16> MVR multicast VLAN name

channel MVR channel configuration

<ProfileName : word16> Profile name

Default:

None

Usage Guide:

To configure **channel interface** of **MVR profile**

Example:

To configure **channel interface (1)** of **MVR profile (123)**

```
Switch# configure terminal
Switch (config)# mvr name 123 channel 1
```

4.2.151 mvr name <mvr_name> frame priority

Command:

```
mvr name <mvr_name> frame priority <CosPriority : 0-7>
```

mvr Multicast VLAN Registration configuration

name MVR multicast name

<MvrName : word16> MVR multicast VLAN name

frame MVR control frame in TX

priority Interface CoS priority

<CosPriority : 0-7> CoS priority ranges from 0 to 7

Default:

0

Usage Guide:

To configure **frame priority** of **MVR profile**

Example:

To configure **frame priority (5)** of **MVR profile (123)**

```
Switch# configure terminal
Switch (config)# mvr name 123 frame priority 5
```

4.2.152 mvr name <mvr_name> frame tagged

Command:

mvr name <mvr_name> frame tagged

mvr Multicast VLAN Registration configuration

name MVR multicast name

<MvrName : word16> MVR multicast VLAN name

frame MVR control frame in TX

tagged Tagged IGMP/MLD frames will be sent

Default:

None

Usage Guide:

To configure **frame tagged** of **MVR profile**

Example:

To configure **frame tagged (frame tagged)** of **MVR profile (123)**

Switch# configure terminal Switch (config)# **mvr name 123 frame tagged**

4.2.153 mvr name <mvr_name> igmp-address

Command:

mvr name <mvr_name> igmp-address <ipv4_ucast>

mvr Multicast VLAN Registration configuration

name MVR multicast name

<MvrName : word16> MVR multicast VLAN name

igmp-address MVR address configuration used in IGMP

<ipv4_ucast> A valid IPv4 unicast address

Default:

0.0.0.0

Usage Guide:

To configure the **MVR address** of **MVR profile**

Example:

To configure the **MVR address (192.168.0.55)** of **MVR profile (123)**

```
Switch# configure terminal
Switch (config)# mvr name 123 igmp-address 192.168.0.55
```

4.2.154 mvr name <mvr_name> last-member-query-interval

Command:

```
mvr name <mvr_name> last-member-query-interval <lpmcLmqi : 0-31744>
```

mvr Multicast VLAN Registration configuration

name MVR multicast name

<MvrName : word16> MVR multicast VLAN name

last-member-query-interval Last Member Query Interval in tenths of seconds

<lpmcLmqi : 0-31744> 0 - 31744 tenths of seconds

Default:

5

Usage Guide:

To configure the **Last Member Query Interval** of **MVR profile**

Example:

To configure the **Last Member Query Interval (50 seconds)** of **MVR profile (123)**

```
Switch# configure terminal
Switch (config)# mvr name 123 last-member-query-interval 500
```

4.2.155 mvr name <mvr_name> mode

Command:

```
mvr name <mvr_name> mode { compatible | dynamic }
```

mvr Multicast VLAN Registration configuration

name MVR multicast name

<MvrName : word16> MVR multicast VLAN name

mode MVR mode of operation

compatible Compatible MVR operation mode

dynamic Dynamic MVR operation mode

Default:

Dynamic

Usage Guide:

To configure the **mode** of **MVR profile**

Example:

To configure the **mode (compatible)** of **MVR profile (123)**

```
Switch# configure terminal
Switch (config)# mvr name 123 mode compatible
```

4.2.156 mvr vlan <vlan_list>

Command:

```
mvr vlan <vlan_list>
```

mvr Multicast VLAN Registration configuration

vlan MVR multicast vlan

<vlan_list> MVR multicast VLAN list

Default:

None

Usage Guide:

To create a profile of **MVR VLAN**

Example:

To create a profile of **MVR VLAN** (5)

```
Switch# configure terminal
Switch (config)# mvr vlan 5
```

4.2.157 mvr vlan <vlan_list> channel

Command:

```
mvr vlan <vlan_list> channel <ProfileName : word16>
```

mvr Multicast VLAN Registration configuration

vlan MVR multicast vlan

<vlan_list> MVR multicast VLAN list

channel MVR channel configuration

<ProfileName : word16> Profile name

Default:

0

Usage Guide:

To configure the **channel** of **MVR profile**

Example:

To configure the **channel (1)** of **MVR VLAN (5)**

```
Switch# configure terminal
Switch (config)# mvr vlan 5 channel 1
```

4.2.158 mvr vlan <vlan_list> frame priority

Command:

```
mvr vlan <vlan_list> frame priority <CosPriority : 0-7>
```

mvr Multicast VLAN Registration configuration

vlan MVR multicast vlan

<vlan_list> MVR multicast VLAN list

frame MVR control frame in TX

priority Interface CoS priority

<CosPriority : 0-7> CoS priority ranges from 0 to 7

Default:

0

Usage Guide:

To configure the **frame priority** of **MVR VLAN**

Example:

To configure the **frame priority (5)** of **MVR VLAN (123)**

```
Switch# configure terminal
```

Switch (config)# **mvr vlan 123 frame priority 5**

4.2.159 mvr vlan <vlan_list> tagged

Command:

mvr vlan <vlan_list> tagged

mvr Multicast VLAN Registration configuration

vlan MVR multicast vlan

<vlan_list> MVR multicast VLAN list

tagged Tagged IGMP/MLD frames will be sent

Default:

Enabled

Usage Guide:

To enable the **IGMP/MLD frame tagged** of **MVR VLAN**

Example:

To enable the **IGMP/MLD frame tagged** of **MVR VLAN (123)**

Switch# configure terminal

Switch (config)# **mvr vlan 123 tagged**

4.2.160 mvr vlan <vlan_list> igmp-address

Command:

mvr vlan <vlan_list> igmp-address <ipv4_ucast>

mvr Multicast VLAN Registration configuration

vlan MVR multicast vlan

<vlan_list> MVR multicast VLAN list

igmp-address MVR address configuration used in IGMP

<ipv4_ucast> A valid IPv4 unicast address

Default:

0.0.0.0

Usage Guide:

To configure the **MVR address** of **MVR VLAN**

Example:

To configure the **MVR address (192.168.0.55)** of **MVR VLAN (123)**

```
Switch# configure terminal
Switch (config)# mvr vlan 123 igmp-address 192.168.0.55
```

4.2.161 mvr vlan <vlan_list> last-member-query-interval

Command:

```
mvr vlan <vlan_list> last-member-query-interval <lpmcLmqi : 0-31744>
```

mvr Multicast VLAN Registration configuration

vlan MVR multicast vlan

<vlan_list> MVR multicast VLAN list

last-member-query-interval Last Member Query Interval in tenths of seconds

<lpmcLmqi : 0-31744> 0 - 31744 tenths of seconds

Default:

5

Usage Guide:

To configure the **Last Member Query Interval** of **MVR VLAN**

Example:

To configure the **Last Member Query Interval (50 seconds)** of **MVR VLAN (123)**

```
Switch# configure terminal
Switch (config)# mvr vlan 123 last-member-query-interval 500
```

4.2.162 mvr vlan <vlan_list> mode

Command:

```
mvr vlan <vlan_list> mode [ compatible | dynamic ]
```

mvr Multicast VLAN Registration configuration

vlan MVR multicast vlan

<vlan_list> MVR multicast VLAN list

mode MVR mode of operation

compatible Compatible MVR operation mode

dynamic Dynamic MVR operation mode

Default:

Dynamic

Usage Guide:

To configure the **mode** of **MVR VLAN**

Example:

To configure the **mode (compatible)** of **MVR VLAN (123)**

```
Switch# configure terminal
Switch (config)# mvr vlan 123 mode compatible
```

4.2.163 mvr vlan <vlan_list> name

Command:

```
mvr vlan <vlan_list> name
```

mvr Multicast VLAN Registration configuration

vlan MVR multicast vlan

<vlan_list> MVR multicast VLAN list

name MVR multicast name

Default:

None

Usage Guide:

To configure profile name of **MVR VLAN**

Example:

To configure profile name (6) of **MVR VLAN** (5)

```
Switch# configure terminal
Switch (config)# mvr vlan 5 name 6
```

4.2.164 network-clock clk-source <clk-source> aneg-mode

Command:

network-clock clk-source <clk-source> aneg-mode { master | slave | forced }

network-clock network-clock

clk-source clk-source - commands related to a specific clock source.

<clk-source : 1-2> Clock source number

aneg-mode Sets the preferred negotiation.

forced Activate forced slave negotiation

master Activate prefer master negotiation

slave Activate prefer slave negotiation

Default:

None

Usage Guide:

To configure **preferred negotiation** of **network-clock**

Example:

To configure **preferred negotiation** (slave) of **network-clock** (source 1)

Switch# configure terminal

Switch (config)# **network-clock clk-source 1 aneg-mode slave**

4.2.165 no

Command:

no

no Negate a command or set its defaults

Default:

N/A

Usage Guide:

To default the function

Example:

To disable the function (**loop-protect**)

Switch# configure terminal

Switch (config)# **no loop-protect**

4.2.166 ntp

Command:

ntp

ntp Configure NTP

Default:

Disabled

Usage Guide:

To enable the NTP service

Example:

To enable the NTP service

Switch# configure terminal

Switch (config)# **ntp**

4.2.167 ntp server

Command:

ntp server <1-5> ip-address { <ipv4_var> | <ipv6_var> | <name_var> }

ntp Configure NTP

server Configure NTP server

<1-5> index number

<hostname> domain name

<ipv4_ucast> ipv4 address

<ipv6_ucast> ipv6 address

Default:

None

Usage Guide:

To configure the **IP addresses** of **NTP Server**

Example:

To configure the **IP address** (9.9.9.9) of **NTP Server** for index 1

```
Switch# configure terminal
Switch (config)# ntp server 1 ip-address 9.9.9.9
```

4.2.168 poe admin-mode enable

Command:

```
poe admin-mode enable
```

poe Power Over Ethernet

admin-mode Enable or disable global PoE management function.

enable poe admin-mode enable

Default:

Enabled

Usage Guide:

To enable **System PoE Admin Mode**.

Example:

To enable **System PoE Admin Mode**.

```
Switch# configure terminal
Switch (config)# poe admin-mode enable
```

4.2.169 poe management mode

Command:

```
poe management mode { class-consumption | class-reserved-power | allocation-consumption |
allocation-reserved-power | lldp-consumption | lldp-reserved-power }
```

poe Power Over Ethernet

management Use management mode to configure PoE power management method.

mode mode

allocation-consumption Max. port power determined by allocated, and power is managed according to power consumption.

allocation-reserved-power Max. port power determined by allocated, and is managed according to reserved power.

class-consumption Max. port power determined by class, and power is managed according to power consumption.

class-reserved-power Max. port power determined by class, and power managed according to reserved power.

lldp-consumption Max. port power determined by LLDP Media protocol, and power is managed according to consumption.

lldp-reserved-power Max. port power determined by LLDP Media protocol, and power is managed according to reserved power.

Default:

Allocation-consumption

Usage Guide:

To configure **PoE Management Mode**.

Example:

To configure **PoE Management Mode** as **LLDP-consumption mode**.

Switch# configure terminal Switch (config)# **poe management mode lldp-consumption**

4.2.170 poe sequential enable

Command:

poe sequential enable

poe Power Over Ethernet

sequential PoE sequential is to delay power feeding when the switch is completely booted.

enable poe sequential enable

Default:

Enabled

Usage Guide:

To enable **Sequential Power up Option**.

Example:

To enable **Sequential Power up Option**.

Switch# configure terminal Switch (config)# **poe sequential enable**

4.2.171 poe sequential interval

Command:

poe sequential interval <1-30>

poe Power Over Ethernet

sequential PoE sequential is to delay power feeding when the switch is completely booted.

interval Set how long system should feeding power to next PoE interface <1-30>

<1-30> poe sequential enable

Default:

5

Usage Guide:

To configure **Sequential Power up Interval**.

Example:

To configure **Sequential Power up Interval (30 seconds per port)**.

Switch# configure terminal Switch (config)# **poe sequential interval 30**

4.2.172 poe sequential rule

Command:

poe sequential rule { port | priority }

poe Power Over Ethernet

sequential rule PoE sequential is to delay power feeding when the switch is completely booted.

port System sequential feeding power the PoE interfaces based port number.

priority Use priority command to configure sequential feeding power to PoE interfaces based on port PoE priority.

Default:

Port

Usage Guide:

To configure **Sequential Power up Port Option.**

Example:

To configure **Sequential Power up Port Option (Priority).**

Switch# configure terminal Switch (config)# **poe sequential rule priority**

4.2.173 poe supply

Command:

poe supply <1-XXX>

poe Power Over Ethernet

supply Use poe supply to specify the maximum power the power supply can deliver.

<1-XXX> Maximum power the power supply can deliver.

Default:

Maximum

Usage Guide:

To configure **Power Supply Budget.**

Example:

To configure **Power Supply Budget** (200 watts).

Switch# configure terminal Switch (config)# **poe supply 200**

4.2.174 poe temperature-protection enable

Command:

poe temperature-protection enable

poe Power Over Ethernet

temperature-protection Configure PoE over temperature protection to enable or disable.

enable poe temperature-protection enable

Default:

Enabled

Usage Guide:

To enable **PoE Temperature Protection.**

Example:

To enable **PoE Temperature Protection.**

Switch# configure terminal Switch (config)# **poe temperature-protection enable**

4.2.175 poe temperature-threshold

Command:

poe temperature-threshold <0-100>

poe Power Over Ethernet

temperature-threshold Set a lower high temperature threshold for the secondary temperature alarm in degrees C.

<0-100> Specifies the new threshold temperature.

Default:

80

Usage Guide:

To enable **PoE Temperature Protection.**

Example:

To enable **PoE Temperature Protection** (70 degrees C).

Switch# configure terminal Switch (config)# **poe temperature-threshold 70**

4.2.176 poe usage-threshold

Command:

poe usage-threshold <1-99>

poe Power Over Ethernet

usage-threshold The poe usage-threshold command sets a percentage threshold above which the system sends a log or SNMP trap.<1-99>: The -threshold percentage configured with this command.

<1-99> The usage-threshold percentage configured with this command.

Default:

85

Usage Guide:

To configure **PoE Usage Threshold.**

Example:

To configure **PoE Usage Threshold (90 %).**

```
Switch# configure terminal
Switch (config)# poe usage-threshold 90
```

4.2.177 poe-time-range

Command:

```
poe-time-range {profile1 | profile2 | profile3 | profile4}
```

poe-time-range Used to create PoE time-range for the switch and enter Power Time-range Create Configuration Mode.

profile1 The PoE time-range profile name, ranging from Profile 1

profile2 The PoE time-range profile name, ranging from Profile 2

profile3 The PoE time-range profile name, ranging from Profile 3

profile4 The PoE time-range profile name, ranging from Profile 4

Default:

N/A

Usage Guide:

To enter PoE time-range profile mode**.**

Example:

To enter PoE time-range profile 1 mode

```
Switch# configure terminal
Switch (config)# poe-time-range profile1
Switch (config-poe-time-range)#
```

4.2.177.1 do

Command:

```
do < exec commands >
```

do To run exec commands

Default:

N/A

Usage Guide:

To run **exec commands**

Example:

To run "show aaa".

```
Switch# configure terminal
Switch (config)# poe-time-range profile1
Switch (config-poe-time-range)#do show aaa
console : local
telnet  : local
ssh     : local
http    : local
```

4.2.177.2 end

Command:

```
end
```

end Go back to EXEC mode

Default:

Auto

Usage Guide:

To back to **EXEC mode**

Example:

To back to **EXEC mode**

```
Switch# configure terminal
Switch (config)# poe-time-range profile1
Switch (config-poe-time-range)#end
Switch#
```

4.2.177.3 exit

Command:

```
exit
```

exit Exit from current mode

Default:

None

Usage Guide:

To exit current mode

Example:

To exit current mode**.**

```
Switch# configure terminal
Switch (config)# poe-time-range profile1
Switch (config-poe-time-range)#exit
Switch (config)#
```

4.2.177.4 no

Command:

```
no
```

no Negate a command or set its defaults

Default:

N/A

Usage Guide:

To default the function.

Example:

To enable the function (**description 999**).

```
Switch# configure terminal
Switch (config)# poe-time-range profile1
Switch (config-poe-time-range)#no description 999
```

4.2.177.5 periodic

Command:

```
periodic { Mon | Tue | Wed | Thu | Fri | Sat | Sun } <start_h> <start_m> to <end_h> <end_m> [ reboot
<reboot_h> <reboot_m> ]
```

periodic To create a periodic mode time-range for the PoE time-range of the switch.

Fri Periodic Mode, with Friday.

Mon Periodic Mode, with Monday.

Sat Periodic Mode, with Saturday.

Sun Periodic Mode, with Sunday.

Thu Periodic Mode, with Thursday.

Tue Periodic Mode, with Tuesday.

Wed Periodic Mode, with Wednesday.

< start_h: 0-23> <0-23> start hour

< start_m: 0-59> <0-59> start minute

to start to end

< end_h: 0-23> <0-23> end hour

< end_m: 0-59> <0-59> end minute

reboot Enable reboot function

< reboot_h: 0-23> <0-23> reboot hour

< reboot_m:0-59> <0-59> reboot minute

Default:

N/A

Usage Guide:

To configure the **Power Over Ethernet Schedule** for specific profile.

Example:

To configure the **Power Over Ethernet Schedule** (below table) for specific profile 1.

Week Day	Start Hour	Start Min	End Hour	End Min	Reboot Enable	Reboot Only	Reboot Hour	Reboot Min
Mon	11	59	22	50	☑	☐	11	44

Switch# configure terminal

Switch (config)# poe-time-range profile1

Switch (config-poe-time-range)# **periodic Mon 11 59 to 22 50 reboot 11 44**

4.2.177.6 reboot-only

Command:

reboot-only { Mon | Tue | Wed | Thu | Fri | Sat | Sun } <reboot_h> <reboot_m>

reboot-only To create a periodic mode time-range for the PoE time-range of the switch.

Fri Periodic Mode, with Friday.

Mon Periodic Mode, with Monday.

Sat Periodic Mode, with Saturday.

Sun Periodic Mode, with Sunday.

Thu Periodic Mode, with Thursday.

Tue Periodic Mode, with Tuesday.

Wed Periodic Mode, with Wednesday.

< reboot_h: 0-23> <0-23> reboot hour

< reboot_m:0-59> <0-59> reboot minute

Default:

N/A

Usage Guide:

To configure the **Power Over Ethernet Reboot Schedule** for specific profile.

Example:

To configure the **Power Over Ethernet Reboot Schedule** (below table) for specific profile.

Week Day	Start Hour	Start Min	End Hour	End Min	Reboot Enable	Reboot Only	Reboot Hour	Reboot Min
Mon	00	0	00	0	☑	☑	00	0

Switch# configure terminal

Switch (config)# poe-time-range profile1

Switch (config-poe-time-range)# **reboot Mon 0 0**

4.2.178 port-security

Command:

port-security

port-security Enable/disable port security globally

Default:

Disabled

Usage Guide:

To enable the **Port Security**

Example:

To enable the **Port Security**

Switch# configure terminal Switch (config)# **port-security**

4.2.179 port-security aging

Command:

port-security aging

port-security Enable/disable port security globally

aging Enable/disable port security aging

Default:

Disabled

Usage Guide:

To enable the **Port Aging**

Example:

To enable the **Port Aging**

Switch# configure terminal Switch (config)# **port-security port-security aging**

4.2.180 port-security aging time

Command:

port-security aging time <10-10000000>

port-security Enable/disable port security globally

aging Enable/disable port security aging

time Time in seconds between check for activity on learned MAC addresses

<10-10000000> seconds

Default:

3600

Usage Guide:

To configure the **Aging Period** of **Port Security**

Example:

To configure the **Aging Period** (159) of **Port Security**

```
Switch# configure terminal
Switch (config)# port-security aging time 159
```

4.2.181 privilege

Command:

```
privilege { exec | configure | config-vlan | line | interface | if-vlan | ipmc-profile | snmps-host |
stp-aggr | dhcp-pool | rfc2544-profile } level <privilege> <cmd>
```

privilege Command privilege parameters

config-vlan VLAN Configuration Mode

configure Global configuration mode

dhcp-pool DHCP Pool Configuration Mode

exec Exec mode

if-vlan VLAN Interface Mode

interface Port List Interface Mode

ipmc-profile IPMC Profile Mode

line Line configuration mode

rfc2544-profile RFC2544 Profile Mode

snmps-host SNMP Server Host Mode

stp-aggr STP Aggregation Mode

level Set privilege level of command

<0-15> Privilege level

<cmd> Initial valid words and literals of the command to modify

Default:

None

Usage Guide:

To configure the **Privilege Level** for **Command Line**

Example:

To configure the **Privilege Level** (DHCP Pool mode, Level 12, Command: host) for **Command Line**

```
Switch# configure terminal
Switch (config)# privilege dhcp-pool level 12 host
```

4.2.182 qos map cos-dscp

Command:

qos map cos-dscp <cos> dpl <dpl> dscp { <dscp_num> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 | af33 | af41 | af42 | af43 | cs1 | cs2 | cs3 | cs4 | cs5 | cs6 | cs7 | ef | va } }

qos Quality of Service

map Global QoS Map/Table

cos-dscp Map for cos to dscp

<Cos : 0~7> Specific class of service or range

next Place QCE before the next QCE ID

smac Setup matched SMAC

tag Setup tag options

Default:

None

Usage Guide:

To update the **QCE**

Example:

To update the **QCE 1 (DMAC: Unicast, Action: Cos 0)**.

Switch# configure terminal Switch (config)# **qos qce update 1 dmac unicast action cos 0**

4.2.189 qos qce refresh

Command:

qos qce refresh

qos Quality of Service

qce QoS Control Entry

refresh Refresh QCE tables in hardware

Default:

None

Usage Guide:

To refresh the **QCE**

Example:

To refresh the **QCE**.

Switch# configure terminal Switch (config)# **qos qce refresh**

4.2.190 qos wred

Command:

qos wred queue <queue> min-th <min_th> mdp-1 <mdp_1> mdp-2 <mdp_2> mdp-3 <mdp_3>

qos Quality of Service

wred Weighted Random Early Discard

queue Specify queue

<Queue : 0~5> Specific queue or range

min-th Specify minimum threshold

<MinTh : 0-100> Specific minimum threshold in percent

mdp-1 Specify drop probability for drop precedence level 1

<Mdp1 : 0-100> Specific drop probability in percent

mdp-2 Specify drop probability for drop precedence level 2

<Mdp2 : 0-100> Specific drop probability in percent

mdp-3 Specify drop probability for drop precedence level 3

<Mdp3 : 0-100> Specific drop probability in percent

Default:

Queue	Enable	Min. Threshold	Max. DP 1	Max. DP 2	Max. DP 3
0	☐	0	1	5	10
1	☑	2	3	4	5
2	☐	0	1	5	10
3	☐	0	1	5	10
4	☐	0	1	5	10
5	☐	0	1	5	10

Usage Guide:

To configure the **Weighted Random Early Detection**

Example:

To configure the **Weighted Random Early Detection** (below table)

Queue	Enable	Min. Threshold	Max. DP 1	Max. DP 2	Max. DP 3
0	☐	0	1	5	10
1	☐	0	1	5	10
2	☐	0	1	5	10
3	☐	0	1	5	10
4	☐	0	1	5	10
5	☐	0	1	5	10

Switch# configure terminal

Switch (config)# **qos wred queue 1 min-th 2 mdp-1 3 mdp-2 4 mdp-3 5**

4.2.191 radius-server attribute 32

Command:

radius-server attribute 32 <Id : line1-253>

radius-server Configure RADIUS

32 NAS-Identifier

Default:

None

Usage Guide:

To configure the **NAS-Identifier**

Example:

To configure the **NAS-Identifier** (fs)

Switch# configure terminal

Switch (config)# **radius-server attribute 32 fs**

4.2.192 radius-server attribute 4

Command:

radius-server attribute 4 <Ipv4 : ipv4_ucast>

radius-server Configure RADIUS

4 NAS-IP-Address

Default:

None

Usage Guide:

To configure the **NAS-IP-Address**

Example:

To configure the **NAS-IP-Address** (7.7.7.7)

```
Switch# configure terminal
Switch (config)# radius-server attribute 4 7.7.7.7
```

4.2.193 radius-server attribute 95

Command:

```
radius-server attribute 95 <Ipv6 : ipv6_ucast>
```

radius-server Configure RADIUS

95 NAS-IPv6-Address

Default:

None

Usage Guide:

To configure the **NAS-IPv6-Address**

Example:

To configure the **NAS-IPv6-Address** (2001::7788)

```
Switch# configure terminal
Switch (config)# radius-server attribute 95 2001::7788
```

4.2.194 radius-server deadtime

Command:

```
radius-server deadtime <Minutes : 1-1440>
```

radius-server Configure RADIUS

deadtime Time to stop using a RADIUS server that doesn't respond

<Minutes : 1-1440> Time in minutes

Default:

0

Usage Guide:

To configure the **Deadtime** of **Radius-Server**

Example:

To configure the **Deadtime** (15) of **Radius-Server**

```
Switch# configure terminal
Switch (config)# radius-server deadtime 15
```

4.2.195 radius-server host

Command:

```
radius-server host <host_name> [ auth-port <auth_port> ] [ acct-port <acct_port> ] [ timeout
<seconds> ] [ retransmit <retries> ] [ key <key> ]
```

radius-server Configure RADIUS

host Specify a RADIUS server

<HostName : word1-255> Hostname or IP address

acct-port UDP port for RADIUS accounting server

<AcctPort : 0-65535> UDP port number

auth-port UDP port for RADIUS authentication server

<AuthPort : 0-65535> UDP port number

key Server specific key (overrides default)

<Key : line1-63> The shared key

retransmit Specify the number of retries to active server (overrides default)

<Retries : 1-1000> Number of retries for a transaction

timeout Time to wait for this RADIUS server to reply (overrides default)

<Seconds : 1-1000> Wait time in seconds

Default:

None

Usage Guide:

To configure the **Host** of **Radius-Server**

Example:

To configure the **Host** (below table) of **Radius-Server**

Hostname	Auth Port	Acct Port	Timeout	Retransmit	Key
planet.com.tw	1812	1813	10	6	123456789

Switch# configure terminal

Switch (config)# **radius-server host fs.com.tw timeout 10 retransmit 6 key 123456789**

4.2.196 radius-server key

Command:

radius-server key <Key : line1-63>

radius-server Configure RADIUS

key Set RADIUS encryption key

<Key : line1-63> The shared key

Default:

None

Usage Guide:

To configure the **Key** of **Radius-Server**

Example:

To configure the **Key** (123456789) of **Radius-Server**

Switch# configure terminal

Switch (config)# **radius radius-server key 123456789**

4.2.197 radius-server retransmit

Command:

radius-server retransmit <Retries : 1-1000>

radius-server Configure RADIUS

retransmit Specify the number of retries to active server

<Retries : 1-1000> Number of retries for a transaction

Default:

3

Usage Guide:

To configure the retransmitted time of **Radius-Server**

Example:

To configure the retransmitted time (5) of **Radius-Server**

```
Switch# configure terminal
Switch (config)# radius-server retransmit 5
```

4.2.198 radius-server timeout

Command:

```
radius-server timeout <Seconds : 1-1000>
```

radius-server Configure RADIUS

timeout Time to wait for a RADIUS server to reply

<Seconds : 1-1000> Wait time in seconds

Default:

5

Usage Guide:

To configure the **timeout** of **Radius-Server**

Example:

To configure the **timeout** (10) of **Radius-Server**

```
Switch# configure terminal
Switch (config)# radius-server timeout 10
```

4.2.199 rmon alarm

Command:

```
rmon alarm <id> {<oid_str> | {{ ifInOctets | ifInUcastPkts | ifInNUcastPkts | ifInDiscards | ifInErrors |
ifInUnknownProtos | ifOutOctets | ifOutUcastPkts | ifOutNUcastPkts | ifOutDiscards | ifOutErrors }
<ifIndex>}} <interval: 1-2147483647> { absolute | delta } rising-threshold <rising_threshold:
-2147483648-2147483647> [<rising_event_id: 0-65535>] falling-threshold <falling_threshold:
-2147483648-2147483647> [ <falling_event_id: 0-65535> ] { [ rising | falling | both ] }
```

rmon Remote Monitoring

alarm Configure an RMON alarm

<oid_str> MIB object to monitor

ifInDiscards The number of inbound packets that are discarded even the packets are normal

ifInErrors The number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol

ifInNUcastPkts The number of broad-cast and multi-cast packets delivered to a higher-layer protocol

ifInOctets The total number of octets received on the interface, including framing characters

ifInUcastPkts The number of uni-cast packets delivered to a higher-layer protocol

ifInUnknownProtos The number of the inbound packets that were discarded because of the unknown or un-support protocol

ifOutDiscards The number of outbound packets that are discarded event the packets is normal

ifOutErrors The number of outbound packets that could not be transmitted because of errors

ifOutNUcastPkts The number of broad-cast and multi-cast packets that request to transmit

ifOutOctets The number of octets transmitted out of the interface, including framing characters

<uint> ifIndex

<interval: 1-2147483647> Sample interval

absolute Test each sample directly

delta Test delta between samples

rising-threshold Configure the rising threshold

<rising_threshold: -2147483648-2147483647> rising threshold value

<rising_event_id: 0-65535> Event to fire on rising threshold crossing

falling-threshold Configure the falling threshold

<falling_threshold: -2147483648-2147483647> falling threshold value

<falling_event_id: 0-65535> Event to fire on falling threshold crossing

both Trigger alarm when the first value is larger than the rising threshold or less than the falling threshold (default)

falling Trigger alarm when the first value is less than the falling threshold

rising Trigger alarm when the first value is larger than the rising threshold

Default:

None

Usage Guide:

To configure the **Alarm** of **RMON**

Example:

To configure the **Alarm** (below table) of **RMON**

ID	Interval	Variable	Sample Type	Value	Startup Alarm	Rising Threshold	Rising Index	Falling Threshold	Falling Index
1	50	.1.3.6.1.2.1.2.2.1.10.15	Absolute	0	Falling	1000	1	520	1

Switch# configure terminal

Switch (config)# **rmon alarm 1 .1.3.6.1.2.1.2.2.1.10.15 50 absolute rising-threshold 1000 1**

falling-threshold 520 1 falling

4.2.200 rmon event

Command:

rmon event <id: 1-65535> [log] [trap <community>] { [description <description>] }

rmon Remote Monitoring

event Configure an RMON event

<id: 1-65535> Event entry ID

description Specify a description of the event

<description> Event description

log Generate RMON log when the event fires

trap Generate SNMP trap when the event fires

<community> SNMP community string

Default:

None

Usage Guide:

To configure the **Event** of **RMON**

Example:

To configure the **Event** (below table) of **RMON**

ID	Desc	Type	Community	Event Last Time
1	error	logandtrap	planet	0

Switch# configure terminal

Switch (config)# **rmon event 1 log trap fs description error**

4.2.201 sflow agent-ip

Command:

sflow agent-ip { ipv4 <v_ipv4_addr> | ipv6 <v_ipv6_addr> }

sflow Statistics flow

agent-ip The agent IP address used as agent-address in UDP datagrams. Defaults to IPv4 loopback address.

Default:

None

Usage Guide:

To configure the **agent IP address** of **sFlow**

Example:

To configure the **agent IP address** (10.10.10.10) of **sFlow**

```
Switch# configure terminal
Switch (config)# sflow agent-ip ipv4 10.10.10.10
```

4.2.202 sflow collector-address

Command:

```
sflow collector-address <hostname>
```

sflow Statistics flow

collector-address Collector address

<hostname> IPv4 address or IPv6 address or hostname identifying the collector receiver

Default:

None

Usage Guide:

To configure the **Collector address** of **sFlow**

Example:

To configure the **Collector address** (10.10.10.10) of **sFlow**

```
Switch# configure terminal
Switch (config)# sflow collector-address 10.10.10.10
```

4.2.203 sflow collector-port

Command:

```
sflow collector-port <collector_port>
```

sflow Statistics flow

collector-port Collector UDP port

<Collector Port : 1-65535> Port number

Default:

None

Usage Guide:

To configure the **Collector port number** of **sFlow**

Example:

To configure the **Collector port number** (555) of **sFlow**

```
Switch# configure terminal
Switch (config)# sflow collector-port 555
```

4.2.204 sflow max-datagram-size

Command:

```
sflow max-datagram-size <datagram_size>
```

sflow Statistics flow

max-datagram-size Maximum datagram size

<DatagramSize : 200-1468> bytes

Default:

None

Usage Guide:

To configure the **Collector Maximum datagram size** of **sFlow**

Example:

To configure the **Collector Maximum datagram size** (555 bytes) of **sFlow**

```
Switch# configure terminal
Switch (config)# sflow max-datagram-size 555
```

4.2.205 sflow timeout

Command:

```
sflow timeout <timeout>
```

sflow Statistics flow

timeout Receiver timeout measured in seconds. The switch decrements the timeout once per second, and as long as it is non-zero, the receiver receives samples. Once the timeout reaches 0, the receiver and all its configuration is reset to defaults.

<timeout: 0-2147483647> Number of seconds

Default:

None

Usage Guide:

To configure the **Collector timeout** of **sFlow**

Example:

To configure the **Collector timeout** (555 seconds) of **sFlow**

```
Switch# configure terminal
Switch (config)# sflow timeout 555
```

4.2.206 sfp temperature-threshold

Command:

```
sfp temperature-threshold <0-100>
```

sfp temperature-threshold Set a lower high temperature threshold for the secondary temperature alarm in degrees C.

<0-100> Specifies the new threshold temperature.

Default:

None

Usage Guide:

To configure the **SFP temperature-threshold** of **sFlow**

Example:

To configure the **SFP temperature-threshold** (55 degrees C) of **sFlow**

```
Switch# configure terminal
Switch (config)# sfp temperature-threshold 55
```

4.2.207 snmp-server

Command:

snmp-server

snmp-server Set SNMP server's configurations

Default:

Enabled

Usage Guide:

To enable the SNMP Service

Example:

To enable the SNMP Service

Switch# configure terminal Switch (config)# **snmp-server**

4.2.208 snmp-server access

Command:

snmp-server access <group_name> model { v1 | v2c | v3 | any } level { auth | noauth | priv } [read <view_name>] [write <write_name>]

snmp-server Set SNMP server's configurations

access access configuration

<GroupName : word32> group name

model security model

any any security model

v1 v1 security model

v2c v2c security model

v3 v3 security model

level security level

auth authNoPriv Security Level

noauth noAuthNoPriv Security Level

priv authPriv Security Level

read specify a read view for the group

<ViewName : word255> read view name

write specify a write view for the group

<WriteName : word255> write view name

Default:

None

Usage Guide:

To configure the **Access** of **SNMP**

Example:

To configure the **Access** (below table) of **SNMP**

Group Name	Security Model	Security Level	Read View Name	Write View Name
default_rw_group	v2c	Auth, Priv	default_view	default_view

Switch# configure terminal

Switch (config)# **snmp-server access default_rw_group model v2c level priv read default_view write default_view**

4.2.209 snmp-server community

Command:

snmp-server community { v2c <comm> [ro | rw] | v3 <v3_comm> [<v_ipv4_addr> <v_ipv4_netmask>] }

snmp-server Set SNMP server's configurations

community Set the SNMP community

v2c SNMPv2c

<comm> Community word

ro Read only

rw Read write

v3 SNMPv3

<V3Comm : word127> Community word

<ipv4_addr> IPv4 address

<ipv4_netmask> IPv4 netmask

Default:

None

Usage Guide:

To configure the **Read / Write / Source network Community** of **SNMP**

Example:

To configure the **Read / Write / Source network Community** (below table) of **SNMP**

Community	Source IP	Source Mask
public	192.168.0.15	255.255.255.0

Switch# configure terminal

Switch (config)# **snmp-server community v3 public 192.168.0.15 255.255.255.0**

4.2.210 snmp-server contact

Command:

snmp-server contact <line255>

snmp-server Set SNMP server's configurations

contact Set the SNMP server's contact string

<line255> contact string

Default:

None

Usage Guide:

To configure the **sysContact string** of **SNMP**

Example:

To configure the **sysContact string** (**Server123**) of **SNMP**

Switch# configure terminal

Switch (config)# **snmp-server contact Server123**

4.2.211 snmp-server engine-id

Command:

snmp-server engine-id local <Engineid : word10-32>

snmp-server Set SNMP server's configurations

engine-id Set SNMP engine ID

local Set SNMP local engine ID

<Engineid : word10-32> local engine ID

Default:

None

Usage Guide:

To configure the **Engine ID**of **SNMP**

Example:

To configure the **Engine ID** (1234567890) of **SNMP**

```
Switch# configure terminal
Switch (config)# snmp-server engine-id local 1234567890
```

4.2.212 snmp-server host

Command:

```
snmp-server host <conf_name>
```

snmp-server Set SNMP server's configurations

host Set SNMP host's configurations

<conf_name> Name of the host configuration

Default:

None

Usage Guide:

To enter the **SNMP host mode**

Example:

To enter the **SNMP host mode (fs)**

```
Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)#
```

4.2.212.1 do

Command:

```
do < exec commands >
```

do To run exec commands.

Default:

N/A

Usage Guide:

To run **exec commands.**

Example:

To run "show aaa"**.**

```
Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)#do show aaa
console : local
telnet  : local
ssh     : local
http    : local
```

4.2.212.2 end

Command:

```
end
```

end Go back to EXEC mode

Default:

Auto

Usage Guide:

To back to **EXEC mode**

Example:

To back to **EXEC mode**

```
Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)#end
Switch#
```

4.2.212.3 exit

Command:

exit

exit Exit from current mode

Default:

None

Usage Guide:

To exit current mode

Example:

To exit current mode**.**

Switch# configure terminal Switch (config)# snmp-server host fs Switch (config-snmps-host)#**exit** Switch (config)#

4.2.212.4 host

Command:

host [<hostname> | <ipv4_ucast> | <ipv6_ucast>] <UdpPort : 1-65535> { informs | traps }

host host configuration

<hostname> hostname of SNMP trap host

<ipv4_ucast> IP address of SNMP trap host

<ipv6_ucast> IP address of SNMP trap host

<UdpPort : 1-65535> UDP port of the trap messages

informs Send Inform messages to this host

traps Send Trap messages to this host

Default:

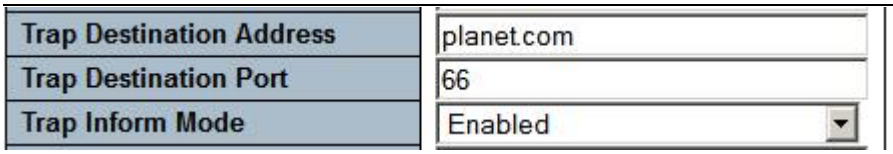
None

Usage Guide:

To configure **Trap Host** of **SNMP**

Example:

To configure **Trap Host** (below table) of **SNMP**



Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)# **host fs.com 66 informs**

4.2.212.5 no

Command:

no

no Negate a command or set its defaults

Default:

N/A

Usage Guide:

To default the function

Example:

To disable the function (**host fs.com 66 informs**)

Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)# **no ip address dhcp**

4.2.212.6 informs

Command:

informs retries <retries> timeout <timeout>

informs Send Inform messages to this host

retries retires inform messages

<Retries : 0-255> retires times

timeout timeout parameter

<Timeout : 0-2147> timeout interval

Default:

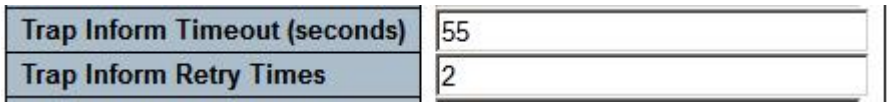
None

Usage Guide:

To configure **Trap Inform time** of **SNMP**

Example:

To configure **Trap Inform time** (below table) of **SNMP**



```
Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)# informs retries 2 timeout 55
```

4.2.212.7 shutdown

Command:

```
shutdown
```

shutdown Disable the trap configuration

Default:

Disabled

Usage Guide:

To disable **Trap mode** of **SNMP**

Example:

To disable **Trap mode** of **SNMP**

```
Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)# shutdown
```

4.2.212.8 traps

Command:

traps [aaa authentication] [system [coldstart] [warmstart]] [switch [stp] [rmon]]

traps trap event configuration

aaa AAA event group

authentication Authentication fail event

switch Switch event group

system System event group

coldstart Cold start event

warmstart Warm start event

rmon RMON event

stp STP event

Default:

Disabled

Usage Guide:

To configure **Trap event** of **SNMP**

Example:

To configure **Trap event (STP, RMON)** of **SNMP**

Switch# configure terminal Switch (config)# snmp-server host fs Switch (config-snmps-host)# **traps switch rmon stp**

4.2.212.9 version

Command:

version { v1 [<v1_comm>] | v2 [<v2_comm>] | v3 [probe | engineID <v_word10_to_32>] **[<securityname>] }**

version Set SNMP trap version

v1 SNMP trap version 1

<V1Comm : word127> SNMP trap community

v2 SNMP trap version 2

<V2comm : word127> SNMP trap community

v3 SNMP trap version 3

<Securtyname : word32> security name

engineID Configure trap server's engine ID

probe Probe trap server's engine ID

Default:

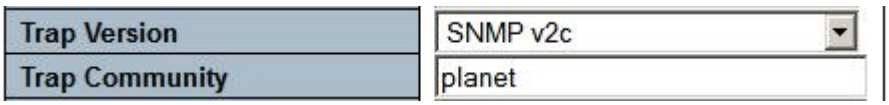
Disabled

Usage Guide:

To configure **Version** of **SNMP**

Example:

To configure **Version (below table)** of **SNMP**



```
Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)# version v2 fs
```

4.2.213 spanning-tree aggregation

Command:

```
spanning-tree aggregation
```

spanning-tree Spanning Tree protocol

aggregation Aggregation mode

Default:

None

Usage Guide:

To enter **aggregation mode** of **STP**

Example:

To enter **aggregation mode** of **STP**

```
Switch# configure terminal
Switch (config)# spanning-tree aggregation
Switch (config-stp-aggr)#
```

4.2.213.1 do

Command:

do < exec commands >

do To run exec commands.

Default:

N/A

Usage Guide:

To run **exec commands.**

Example:

To run "show aaa"**.**

Switch# configure terminal Switch (config)# spanning-tree aggregation Switch (config-stp-aggr)#**do show aaa** console : local telnet : local ssh : local http : local

4.2.213.2 end

Command:

end

end Go back to EXEC mode

Default:

Auto

Usage Guide:

To back to **EXEC mode**

Example:

To back to **EXEC mode**

Switch# configure terminal Switch (config)# spanning-tree aggregation Switch (config-stp-aggr)#**end** Switch#

4.2.213.3 exit

Command:

exit

exit Exit from current mode

Default:

None

Usage Guide:

To exit current mode

Example:

To exit current mode**.**

Switch# configure terminal Switch (config)# spanning-tree aggregation Switch (config-stp-aggr)#**exit** Switch (config)#

4.2.213.4 no

Command:

no

no Negate a command or set its defaults

Default:

N/A

Usage Guide:

To default the function

Example:

To disable the function (**spanning-tree auto-edge**)

Switch# configure terminal Switch (config)# snmp-server host fs

Switch (config-snmps-host)# **no spanning-tree auto-edge**

4.2.213.5 spanning-tree auto-edge

Command:

spanning-tree auto-edge

spanning-tree Spanning Tree protocol

auto-edge Auto detect edge status

Default:

Enabled

Usage Guide:

To enable the **Auto Edge** of **CIST Aggregated Port**

Example:

To enable the **Auto Edge** of **CIST Aggregated Port**

Switch# configure terminal

Switch (config)# snmp-server host fs

Switch (config-snmps-host)# **spanning-tree auto-edge**

4.2.213.6 spanning-tree bpdu-guard

Command:

spanning-tree bpdu-guard

spanning-tree Spanning Tree protocol

bpdu-guard Enable/disable BPDU guard

Default:

Disabled

Usage Guide:

To enable the **BPDU Guard** of **CIST Aggregated Port**

Example:

To enable the **BPDU Guard** of **CIST Aggregated Port**

```
Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)# spanning-tree bpdu-guard
```

4.2.213.7 spanning-tree edge

Command:

```
spanning-tree edge
```

spanning-tree Spanning Tree protocol

edge Edge port

Default:

Disabled

Usage Guide:

To enable the **Admin Edge** of **CIST Aggregated Port**

Example:

To enable the **Admin Edge** of **CIST Aggregated Port**

```
Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)# spanning-tree edge
```

4.2.213.8 spanning-tree link-type

Command:

```
spanning-tree link-type link-type { point-to-point | shared | auto }
```

spanning-tree Spanning Tree protocol

link-type Port link-type

auto Auto detect

point-to-point Forced to point-to-point

shared Forced to Shared

Default:

Point to Point

Usage Guide:

To configure the **Point to Point mode (Shared)** of **CIST Aggregated Port**

Example:

To configure the **Point to Point mode (Shared)** of **CIST Aggregated Port**

```
Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)# spanning-tree link-type shared
```

4.2.213.9 spanning-tree mst <instance> cost

Command:

```
spanning-tree mst <instance> cost { <cost> | auto }
```

spanning-tree Spanning Tree protocol

mst STP bridge instance

<Instance : 0-7> instance 0-7 (CIST=0, MST1=1...)

cost STP Cost of this port

<Cost : 1-200000000> Cost range

auto Use auto cost

Default:

Auto

Usage Guide:

To configure the **Path Cost** of **MSTI Port**

Example:

To configure the **Path Cost (321)** of **MSTI Port (MST 2)**

```
Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)# spanning-tree mst 2 cost 321
```

4.2.213.10 spanning-tree mst <instance> port-priority

Command:

```
spanning-tree mst <instance> port-priority <prio>
```

spanning-tree Spanning Tree protocol

mst STP bridge instance

<Instance : 0-7> instance 0-7 (CIST=0, MST1=1...)

port-priority STP priority of this port

<Prio : 0-240> Range (lower higher priority)

Default:

Auto

Usage Guide:

To configure the **Port Priority** of **MSTI Port**

Example:

To configure the **Port Priority (96)** of **MSTI Port (MST 2)**

```
Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)# spanning-tree mst 2 port-priority 96
```

4.2.213.11 spanning-tree restricted-role

Command:

```
spanning-tree restricted-role
```

spanning-tree Spanning Tree protocol

restricted-role Port role is restricted (never root port)

Default:

Disabled

Usage Guide:

To enable the **Restricted Role** of **CIST**

Example:

To enable the **Restricted Role** of **CIST**

```
Switch# configure terminal
Switch (config)# snmp-server host fs
Switch (config-snmps-host)# spanning-tree restricted-role
```

4.2.213.12 spanning-tree restricted-tcn

Command:

spanning-tree restricted-tcn

spanning-tree Spanning Tree protocol

restricted-tcn Restrict topology change notifications

Default:

Disabled

Usage Guide:

To enable the **Restricted TCN** of **CIST**

Example:

To enable the **Restricted TCN** of **CIST**

Switch# configure terminal (config)# spanning-tree aggregation (config-stp-aggr)# **spanning-tree restricted-tcn**

4.2.214 switchport vlan mapping

Command:

switchport vlan mapping <group> <vlan_list> <translation_vlan>

switchport Set switching mode characteristics

vlan vlan - Vlan translation

mapping Add VLAN translation entry into a group

<group id : 1-29> Group id

<vlan_list> VLAN list

< translation_vlan > translation VLAN ID

Default:

None

Usage Guide:

To configure the **VLAN Translation**

Example:

To enable the **VLAN Translation (below table)**

Group ID	VLAN ID	Translated to VID
1	3	5

Switch# configure terminal

Switch (config)# **switchport vlan mapping 1 3 5**

4.2.215 tacacs-server deadtime

Command:

tacacs-server deadtime <minutes>

tacacs-server Configure TACACS+

deadtime Time to stop using a TACACS+ server that doesn't respond

<Minutes : 1-1440> Time in minutes

Default:

0

Usage Guide:

To configure the **Deadtime** of **TACACS+ Server**

Example:

To enable the **Deadtime (6)** of **TACACS+ Server**

Switch# configure terminal

Switch (config)# **tacacs-server deadtime 6**

4.2.216 tacacs-server host

Command:

tacacs-server host <host_name> [port <port>] [timeout <seconds>] [key <key>]

tacacs-server Configure TACACS+

host Specify a TACACS+ server

<HostName : word1-255> Hostname or IP address

key Server specific key (overrides default)

port TCP port for TACACS+ server

<Port : 0-65535> TCP port number

timeout Time to wait for this TACACS+ server to reply (overrides default)

<Seconds : 1-1000> Wait time in seconds

<Key : line1-63> The shared key

Default:

None

Usage Guide:

To configure the **Host** of **TACACS+ Server**

Example:

To enable the **Host (below table)** of **TACACS+ Server**

Switch# configure terminal Switch (config)# **tacacs-server host fs.com port 55 timeout 6 key 7788**

4.2.217 transport email authentication

Command:

transport email authentication username <username> password <password>

transport Enable or disable transport email function.

email Enable or disable transport email function.

authentication configure SMTP authentication's username and password

<Username> User name allows letters, numbers and underscores

<Password> The ENCRYPTED (hidden) user password. Notice the ENCRYPTED password will be decoded by system internally. You cannot directly use it as same as the Plain Text and it is not human-readable text normally.

Default:

N/A

Usage Guide:

To configure SMTP authentication's username and password

Example:

To configure SMTP authentication's username (123@fs.com.tw) and password (456)

Switch# configure terminal Switch (config)# **transport email authentication username 123@fs.com.tw password 456**

4.2.218 transport email from

Command:

transport email from <mail_addr> subject <title>

transport Enable or disable transport email function.

email Enable or disable transport email function.

from sender's email address

<mail_addr> mail address

subject subject/title of the email

<title> email title

Default:

N/A

Usage Guide:

To configure SMTP sender's email address and title of the email

Example:

To configure SMTP sender's email address (**sys@fs.com.tw**) and title of the email (**syserror**)

Switch# configure terminal Switch (config)# **transport email from sys@fs.com.tw subject syserror**

4.2.219 transport email smtp-server

Command:

transport email smtp-server { <ipv4_addr> | <server> } port <1_to_65535>

transport Enable or disable transport email function.

email Enable or disable transport email function.

smtp-server Set the SMTP server name or IP address of the SMTP server

<ipv4_ucast> <ipv4_addr>: IP address

<server> hostname

port port

<1-65535> port_number: Specifies the port number. The range is from 1 to 65535. The default port number is 25.

Default:

N/A

Usage Guide:

To configure SMTP Server address and port number.

Example:

To configure SMTP Server address (**mail.fs.com.tw**) and port number (**123**)

```
Switch# configure terminal
Switch (config)# transport email smtp-server mail.fs.com.tw port 123
```

4.2.220 transport email to

Command:

```
transport email to <1 | 2> <mail_addr>
```

transport Enable or disable transport email function.

email Enable or disable transport email function.

to receiver's email

<1|2> 1: mail address 1 2: mail address 2

<mail_addr> mail address

Default:

N/A

Usage Guide:

To configure SMTP destination mail address.

Example:

To configure SMTP destination mail address 1 (**ss@fs.com.tw**).

```
Switch# configure terminal
Switch (config)# transport email to 1 ss@fs.com.tw
```

4.2.221 upnp

Command:

```
upnp
```

upnp Set UPnP's configurations

Default:

Disabled

Usage Guide:

To enable the **UPnP service**

Example:

To enable the **UPnP service**

```
Switch# configure terminal
Switch (config)# upnp
```

4.2.222 upnp advertising-duration

Command:

```
upnp advertising-duration <100-86400>
```

upnp Set UPnP's configurations

advertising-duration Set advertising duration

<100-86400> advertising duration

Default:

100

Usage Guide:

To configure the **Advertising Duration** of **UPnP**

Example:

To configure the **Advertising Duration** (123) of **UPnP**

```
Switch# configure terminal
Switch (config)# upnp advertising-duration 123
```

4.2.223 upnp ttl

Command:

```
upnp ttl <1-255>
```

upnp Set UPnP's configurations

ttl Set TTL value

<1-255> TTL value

Default:

4

Usage Guide:

To configure the **TTL** of **UPnP**

Example:

To configure the **TTL** (8) of **UPnP**

Switch# configure terminal Switch (config)# **upnp ttl 8**

4.2.224 username

Command:

username <name> privilege admin password <password>

username Establish User Name Authentication

<Username : word31> User name allows letters, numbers and underscores, but cannot be purely numeric

privilege Set user privilege level

<privilegeLevel : 0-15> User privilege level

password Specify the password for the user

encrypted Specifies an ENCRYPTED password will follow

none NULL password

unencrypted Specifies an UNENCRYPTED password will follow

<Password : word4-44> The ENCRYPTED (hidden) user password. Notice the ENCRYPTED password will be decoded by system internally. You cannot directly use it as same as the Plain Text and it is not human-readable text

Default:

None

Usage Guide:

To configure the **Profiles** of **Username**

Example:

To configure the **Profiles** of **Username (Username: user1234, Password: 2wsx@WS, Privilege Level: privilege admin)**

Switch# configure terminal Switch (config)# **username user1234 privilege admin password 2wsx@WS** Press ENTER to get started

```
Username: user 1234
Password: 2wsx@WS
#
```

4.2.225 vlan

Command:

```
vlan <vlist>
```

vlan VLAN commands

<vlan_list> VLAN IDs 1~4095

Default:

None

Usage Guide:

To create the **VLAN Profiles**

Example:

To create the **VLAN Profiles (VLAN 5)**

```
Switch# configure terminal
Switch (config)# vlan 5
Switch (config-vlan)#
```

4.2.225.1 do

Command:

```
do < exec commands >
```

do To run exec commands.

Default:

N/A

Usage Guide:

To run **exec commands.**

Example:

To run "show aaa"**.**

```
Switch# configure terminal
Switch (config)# vlan 5
Switch (config-vlan)#do show aaa
console : local
telnet  : local
ssh     : local
http    : local
```

4.2.225.2 end

Command:

```
end
```

end Go back to EXEC mode

Default:

Auto

Usage Guide:

To back to **EXEC mode**

Example:

To back to **EXEC mode**

```
Switch# configure terminal
Switch (config)# vlan 5
Switch (config-vlan)#end
Switch#
```

4.2.225.3 exit

Command:

```
exit
```

exit Exit from current mode

Default:

None

Usage Guide:

To exit current mode

Example:

To exit current mode

```
Switch# configure terminal
Switch (config)# vlan 5
Switch (config-vlan)# exit
Switch (config)#
```

4.2.225.4 name

Command:

```
name <vlan_name>
```

name ASCII name of the VLAN

<vword32> The ASCII name for the VLAN

Default:

None

Usage Guide:

To configure description of **VLAN**

Example:

To configure description (FAE) of **VLAN**

```
Switch# configure terminal
Switch (config)# vlan 5
Switch (config-vlan)# name FAE
```

4.2.225.5 no

Command:

```
no
```

no Negate a command or set its defaults

Default:

N/A

Usage Guide:

To default the function

Example:

To disable the function (**name FAE**)

```
Switch# configure terminal
Switch (config)# vlan 5
Switch (config-vlan)# no name FAE
```

4.2.226 vlan ethertype s-custom-port

Command:

```
vlan ethertype s-custom-port <etype>
```

vlan VLAN commands

ethertype Ether type for Custom S-ports

s-custom-port Custom S-ports configuration

<etype> Ethertype (Range: 0x0600-0xffff)

Default:

0x88A8

Usage Guide:

To create the **Ethernet type** of **Custom S-ports**

Example:

To create the **Ethernet type (0x88A9)** of **Custom S-ports**

```
Switch# configure terminal
Switch (config)# vlan ethertype s-custom-port 0x88a9
```

4.2.227 vlan protocol

Command:

vlan protocol { { eth2 { <etype> | arp | ip | ipx | at } } | { snap { <oui> | rfc-1042 | snap-8021h } <pid> } | { llc <dsap> <ssap> } } group <grp_id>

vlan VLAN commands

protocol Protocol-based VLAN commands

eth2 Ethernet-based VLAN commands

<0x600-0xffff> Ether Type(Range: 0x600 - 0xFFFF)

arp Ether Type is ARP

at Ether Type is AppleTalk

ip Ether Type is IP

ipx Ether Type is IPX

llc LLC-based VLAN group

<0x0-0xff> DSAP (Range: 0x00 - 0xFF)

<0x0-0xff> SSAP (Range: 0x00 - 0xFF)

snap SNAP-based VLAN group

<0x0-0xffffff> SNAP OUI (Range 0x000000 - 0XFFFFFF)

rfc-1042 SNAP OUI is rfc-1042

snap-8021h SNAP OUI is 8021h

group Protocol-based VLAN group commands

<grp_id> Group Name (Range: 1 - 16 characters)

Default:

None

Usage Guide:

To configure the **Protocol-based VLAN**

Example:

To configure the **Protocol-based VLAN (below table)**

Frame Type	Value	Group Name
LLC	55-66	3

Switch# configure terminal

Switch (config)# **vlan protocol llc 0x55 0x66 group 3**

4.2.228 voice vlan

Command:

voice vlan

voice Voice appliance attributes

vlan Vlan for voice traffic

Default:

Disabled

Usage Guide:

To enable the **Voice VLAN** service

Example:

To enable the **Voice VLAN** service

Switch# configure terminal Switch (config)# **voice vlan**

4.2.229 voice vlan aging-time

Command:

voice vlan aging-time <aging_time>

voice Voice appliance attributes

vlan Vlan for voice traffic

aging-time Set secure learning aging time

<AgingTime : 10-10000000> Aging time, 10-10000000 seconds

Default:

86400

Usage Guide:

To configure the **Aging Time** of **Voice VLAN**

Example:

To configure the **Aging Time** of **Voice VLAN**

Switch# configure terminal Switch (config)# **voice vlan aging-time 8888**

4.2.230 voice vlan class

Command:

voice vlan class <traffic_class>

voice Voice appliance attributes

vlan Vlan for voice traffic

class Set traffic class

< traffic_class : 0-7> Traffic class value

Default:

7

Usage Guide:

To configure the **Traffic Class** of **Voice VLAN**

Example:

To configure the **Traffic Class (5)** of **Voice VLAN**

Switch# configure terminal Switch (config)# **voice vlan class 5**

4.2.231 voice vlan oui

Command:

voice vlan oui <oui> [description <description>]

voice Voice appliance attributes

vlan Vlan for voice traffic

oui OUI configuration

<oui> OUI value

description Set description for the OUI

<Description : line32> Description line

Default:

None

Usage Guide:

To configure the **OUI** of **Voice VLAN**

Example:

To configure the **OUI (OUI: 00:45:89, Description: qwe)** of **Voice VLAN**

```
Switch# configure terminal
Switch (config)# voice vlan oui 00:45:89 description qwe
```

4.2.232 voice vlan vid

Command:

```
voice vlan vid <vlan_id>
```

voice Voice appliance attributes

vlan Vlan for voice traffic

vid Set VLAN ID

<vlan_id> VLAN ID, 1-4095

Default:

1000

Usage Guide:

To configure the **VID** of **Voice VLAN**

Example:

To configure the **VID (66)** of **Voice VLAN**

```
Switch# configure terminal
Switch (config)# voice vlan vid 66
```

4.2.233 web privilege group

Command:

```
web privilege group <group_name> level { [ cro <cro: 0-15> ] [ crw <crw: 0-15> ] [ sro <sro: 0-15> ]
[ srw <srw: 0-15> ] }
```

web Web

privilege Web privilege

group Web privilege group

<vlan_id> VLAN ID, 1-4095

<group_name> Valid words are 'Aggregation' 'DHCP' 'Debug' 'Dhcp_Client' 'Diagnostics' 'EPS' 'ERPS' 'ETH_LINK_OAM' 'EVC' 'Green_Ethernet' 'IP2' 'IPMC_Snooping' 'LACP' 'LLDP' 'Loop_Protect' 'MAC_Table' 'MEP' 'MVR' 'Maintenance' 'Mirroring' 'NTP' 'POE' 'PTP' 'Ports' 'Private_VLANs' 'QoS' 'RPC' 'Security' 'Spanning_Tree' 'System' 'Timer' 'UPnP' 'VCL'

level Web privilege group level

cro Configuration Read-only level

crw Configuration Read-write level

sro Status/Statistics Read-only level

srw Status/Statistics Read-write level

Default:

N/A

Usage Guide:

To configure the **Privilege Level**

Example:

To configure the **Privilege Level (below table)**

Group Name	Privilege Levels			
	Configuration Read-only	Configuration/Execute Read/write	Status/Statistics Read-only	Status/Statistics Read/write
Aggregation	3	4	3	5

Switch# configure terminal

Switch (config)# **web privilege group Aggregation level cro 3 crw 4 sro 3 srw 5**

4.3 copy

4.3.1 copy

Command:

copy { startup-config | running-config | <source_path> } { startup-config | running-config | <destination_path> } [syntax-check]

copy Copy from source to destination

flash:filename | tftp://server/path-and-filename File in FLASH or on TFTP server

running-config Currently running configuration

startup-config Startup configuration Output modifiers

syntax-check Perform syntax check on source configuration

Default:

None

Usage Guide:

To copy configuration from source to destination

Example:

To copy configuration from source (**running-config**) to destination (**startup-config**)

```
Switch# copy running-config startup-config
```

4.4 debug

4.4.1 debug

Command:

```
debug prompt <debug_prompt>
```

debug Debugging functions

prompt Set prompt for testing

<debug_prompt> Word for prompt

Default:

None

Usage Guide:

To configure Description of **Debug Prompt**

Example:

To configure Description (1233) of **Debug Prompt**

```
Switch # debug prompt 1233
1233#
```

4.5 delete

4.5.1 delete

Command:

```
delete <path>
```

delete Delete one file in flash: file system

<Path : word> Name of file to delete

Default:

None

Usage Guide:

To delete Configuration File of **Flash**

Example:

To delete Configuration File (222) of **Flash**

```
Switch # copy running-config flash:222
Building configuration...
% Saving 1833 bytes to flash:222

Switch # dir
Directory of flash:
r- 1970-01-01 00:00:00          648 default-config
rw 1970-01-01 07:26:26         1833 startup-config
rw 1970-01-01 00:18:40         1833 222
3 files, 4314 bytes total.

Switch # delete flash:222

Switch # dir
Directory of flash:
r- 1970-01-01 00:00:00          648 default-config
rw 1970-01-01 07:26:26         1833 startup-config
2 files, 2481 bytes total.
```

4.6 dir

4.6.1 dir

Command:

```
dir
```

dir Directory of all files in flash: file system

Default:

None

Usage Guide:

To list directory of file system

Example:

To list directory of file system

```
Switch # dir
Directory of flash:
r- 1970-01-01 00:00:00          648 default-config
rw 1970-01-01 07:26:26          1833 startup-config
2 files, 2481 bytes total.
```

4.7 disable

4.7.1 disable

Command:

```
disable
```

disable Turn off privileged commands

Default:

None

Usage Guide:

To exit **enable mode**

Example:

To exit **enable mode**

```
Switch # disable
Switch >
```

4.8 do

4.8.1 do

Command:

```
do < exec commands >
```

do To run exec commands.

Default:

N/A

Usage Guide:

To run **exec commands.**

Example:

To run "show aaa"**.**

```
Switch# do show aaa
  console : local
  telnet  : local
  ssh     : local
  http    : local
```

4.9 dot1x

4.9.1 dot1x initialize

Command:

```
dot1x initialize [ interface ( <port_type> [ <plist> ] ) ]
```

dot1x IEEE Standard for port-based Network Access Control

initialize Force re-authentication immediately

Default:

N/A

Usage Guide:

To re-authenticate specific interface immediately**.**

Example:

To re-authenticate specific interface (**GigabitEthernet 1/1**) immediately**.**

```
Switch# dot1x initialize interface GigabitEthernet 1/1
```

4.10 enable

4.10.1 enable

Command:

enable

enable Turn on privileged commands

Default:

None

Usage Guide:

To enter **enable mode**

Example:

To enter **enable mode**

Switch > **enable** Switch #

4.11 erps

4.11.1 erps

Command:

erps <group> command { force | manual | clear } { port0 | port1 }

erps Ethernet Ring Protection Switching

1-64 ERPS group number

command Administrative Command

clear Clear command

force Force command

manual Manual command

port0 ERPS Port 0 interface

port1 ERPS Port 1 interface

Default:

None

Usage Guide:

To configure **Instance Command** of **Group**

Example:

To configure **Instance Command** (below table) of **Group (1)**

```
Switch # erps 1 command force port0
```

4.12 exit

4.12.1 exit

Command:

```
exit
```

exit Exit from EXEC mode

Default:

None

Usage Guide:

To exit EXEC mode

Example:

To exit EXEC mode

```
Switch # disable
Switch > exit

Press ENTER to get started
```

4.13 firmware

4.13.1 firmware swap

Command:

```
firmware swap
```

firmware Firmware upgrade/swap

swap Swap between Active and Alternate firmware image

Default:

None

Usage Guide:

To swap **Active** and **Alternate firmware image**

Example:

To swap **Active** and **Alternate firmware image**

Switch # **firmware swap**

4.13.2 firmware upgrade

Command:

firmware upgrade <tftpserver_path_file>

firmware Firmware upgrade/swap

upgrade Firmware upgrade

<TFTPServer_path_file : word> TFTP Server IP address, path and file name for the server containing the new image.

Default:

None

Usage Guide:

To upgrade firmware via **TFTP Server**

Example:

To upgrade firmware via **TFTP Server (File: tftp://192.168.0.11/switch.bin)**

Switch # **firmware upgrade tftp://192.168.0.11/switch.bin**

4.14 ip

4.14.1 ip dhcp retry interface vlan

Command:

ip dhcp retry interface vlan <vlan_id>

ip IPv4 commands

dhcp Dhcp commands

retry Restart the DHCP query process

interface Interface

vlan Vlan interface

<vlan_id> Vlan ID

Default:

None

Usage Guide:

To do **DHCP renew** for specific VLAN

Example:

To do **DHCP renew** for specific VLAN (6)

```
Switch # ip dhcp retry interface vlan 6
```

4.15 logout

4.15.1 logout

Command:

```
logout
```

logout Exit from EXEC mode

Default:

None

Usage Guide:

To exit EXEC mode

Example:

To exit EXEC mode

```
Switch # logout

Press ENTER to get started
```

4.16 more

4.16.1 more

Command:

more <path>

more Display file

<Path> File in FLASH or on TFTP server

Default:

None

Usage Guide:

To view the file

Example:

To view the file (222)

Switch # copy running-config flash:222

Building configuration...

% Saving 2038 bytes to flash:222

Switch # **more flash:222**

hostname Switch

username admin privilege 15 password none

!

vlan 1

!

vlan 5

!

!

!

4.17 no

4.17.1 no

Command:

no

no Negate a command or set its defaults

Default:

N/A

Usage Guide:

To default the function

Example:

To disable the function (**erps 1 command force port0**)

Switch# **no erps 1 command force port0**

4.18 ping

4.18.1 ping ip

Command:

ping ip <v_ip_addr> [repeat <count>] [size <size>] [interval <seconds>]

ping Send ICMP echo messages

ip IP (ICMP) echo

<v_ip_addr> ICMP destination address

interval Specify repeat interval

<Seconds : 0-30> 0-30; Default is 0

repeat Specify repeat count

<Count : 1-60> 1-60; Default is 5

size Specify datagram size

<Size : 2-1452> 2-1452; Default is 56 (excluding MAC, IP and ICMP headers)

Default:

N/A

Usage Guide:

To run the **IPv4 Ping** function

Example:

To run the **IPv4 Ping** (192.168.0.78) function

```
Switch# ping ip 192.168.0.78
PING server 192.168.0.78, 56 bytes of data.
64 bytes from 192.168.0.78: icmp_seq=0, time=0ms
64 bytes from 192.168.0.78: icmp_seq=1, time=0ms
64 bytes from 192.168.0.78: icmp_seq=2, time=0ms
64 bytes from 192.168.0.78: icmp_seq=3, time=0ms
64 bytes from 192.168.0.78: icmp_seq=4, time=0ms
Sent 5 packets, received 5 OK, 0 bad
```

4.18.2 ping ipv6

Command:

```
ping ipv6 <v_ipv6_addr> [ repeat <count> ] [ size <size> ] [ interval <seconds> ] [ interface vlan
<v_vlan_id> ]
```

ping Send ICMP echo messages

ipv6 IPv6 (ICMPv6) echo

interface Select an interface to configure

vlan VLAN Interface

<v_vlan_id> VLAN identifier(s): VID

interval Specify repeat interval

<Seconds : 0-30> 0-30; Default is 0

repeat Specify repeat count

<Count : 1-60> 1-60; Default is 5

size Specify datagram size

<Size : 2-1452> 2-1452; Default is 56 (excluding MAC, IP and ICMP headers)

Default:

N/A

Usage Guide:

To run the **IPv6 Ping** function

Example:

To run the **IPv6 Ping** (2001::7788) function

```
Switch# ping ipv6 2001::7788
PING6 server 2001::7788, 56 bytes of data.
```

```
recvfrom: Operation timed out
recvfrom: Operation timed out
recvfrom: Operation timed out
recvfrom: Operation timed out
recvfrom: Operation timed out
Sent 5 packets, received 0 OK, 0 bad
```

4.19 reload

4.19.1 reload cold

Command:

```
reload cold
```

reload Reload system

cold Reload cold.

Default:

N/A

Usage Guide:

To restart the device.

Example:

To restart the device.

```
Switch# reload cold
```

4.19.2 reload defaults

Command:

```
reload defaults [ keep-ip ]
```

reload Reload system

defaults Reload defaults without rebooting.

keep-ip Attempt to keep VLAN1 IP setup.

Default:

N/A

Usage Guide:

To store the device factory default settings.

Example:

To store the device factory default settings.

```
Switch# reload defaults
```

4.20 send

4.20.1 send

Command:

```
send { * | console 0 | vty <vty_list> } <message>
```

reload Reload system

***** All tty lines

console Primary terminal line

vty Virtual terminal

Default:

N/A

Usage Guide:

To send message for **command line** user.

Example:

To send message (hi, I will upgrade the firmware, OK?) for **command line** user (All).

```
Switch # send * 1
Enter TEXT message.  End with the character '1'.
hi, I will upgrade the firmware, OK?
1

----------------------------------------
*** Message from line 0:

hi, I will upgrade the firmware, OK?
```

4.21 show

4.21.1 show aaa

Command:

show aaa

show Show running system information

aaa Login methods

Default:

N/A

Usage Guide:

To display the **AAA** services.

Example:

To display the **AAA** services

```
Switch # show aaa
  console : local
  telnet  : local
  ssh     : local
  http    : local
```

4.21.2 show access management

Command:

show access management [statistics | <access_id_list>]

show Show running system information

access Access management

management Access management configuration

<AccessIdList : 1~16> ID of access management entry

Statistics Statistics data

Default:

N/A

Usage Guide:

To display **Access Management Statistics.**

Example:

To display **Access Management Statistics.**

Switch # **show access management statistics**

Access Management Statistics:

HTTP	Receive:	0	Allow:	0	Discard:	0
HTTPS	Receive:	0	Allow:	0	Discard:	0
SNMP	Receive:	0	Allow:	0	Discard:	0
TELNET	Receive:	0	Allow:	0	Discard:	0
SSH	Receive:	0	Allow:	0	Discard:	0

4.21.3 show access-list

Command:

show access-list [interface [(<port_type> [<v_port_type_list>])]] [rate-limiter [<rate_limiter_list>]] [ace statistics [<ace_list>]]

show Show running system information

access Access management

management Access management configuration

<AccessIdList : 1~16> ID of access management entry

statistics Statistics data

Default:

N/A

Usage Guide:

To display **ACL Statistics, Rate Limiter List, ACE Statistics.**

Example:

To display **ACL Statistics, Rate Limiter List, ACE Statistics for interface GigabitEthernet 1/1.**

Switch # **show access-list interface GigabitEthernet 1/1 ace statistics rate-limiter**

Switch access-list ace number: 0

Switch access-list rate limiter ID 1 is 1 pps
Switch access-list rate limiter ID 2 is 1 pps
Switch access-list rate limiter ID 3 is 1 pps
Switch access-list rate limiter ID 4 is 1 pps
Switch access-list rate limiter ID 5 is 1 pps
Switch access-list rate limiter ID 6 is 1 pps
Switch access-list rate limiter ID 7 is 1 pps
Switch access-list rate limiter ID 8 is 1 pps
Switch access-list rate limiter ID 9 is 1 pps
Switch access-list rate limiter ID 10 is 1 pps
Switch access-list rate limiter ID 11 is 1 pps
Switch access-list rate limiter ID 12 is 1 pps
Switch access-list rate limiter ID 13 is 1 pps
Switch access-list rate limiter ID 14 is 1 pps
Switch access-list rate limiter ID 15 is 1 pps
Switch access-list rate limiter ID 16 is 1 pps

GigabitEthernet 1/1 :

GigabitEthernet 1/1 access-list action is permit
GigabitEthernet 1/1 access-list policy ID is 0
GigabitEthernet 1/1 access-list rate limiter ID is disabled
GigabitEthernet 1/1 access-list redirect is disabled
GigabitEthernet 1/1 access-list logging is disabled
GigabitEthernet 1/1 access-list shutdown is disabled
GigabitEthernet 1/1 access-list port-state is enabled
GigabitEthernet 1/1 access-list counter is 0

4.21.4 show access-list

Command:

show access-list [interface [(<port_type> [<v_port_type_list>])]] [rate-limiter [<rate_limiter_list>]] [ace statistics [<ace_list>]]

show Show running system information

access-list Access list

ace Access list entry

statistics Traffic statistics

interface Select an interface to configure

rate-limiter Rate limiter

Default:

N/A

Usage Guide:

To display the **ACL Statistics, Rate Limiter List, ACE Statistics.**

Example:

To display the **ACL Statistics, Rate Limiter List, ACE Statistics for interface GigabitEthernet 1/1.**

```
Switch # show access-list interface GigabitEthernet 1/1 ace statistics rate-limiter

Switch access-list ace number: 0

Switch access-list rate limiter ID 1 is 1 pps
Switch access-list rate limiter ID 2 is 1 pps
Switch access-list rate limiter ID 3 is 1 pps
Switch access-list rate limiter ID 4 is 1 pps
Switch access-list rate limiter ID 5 is 1 pps
Switch access-list rate limiter ID 6 is 1 pps
Switch access-list rate limiter ID 7 is 1 pps
Switch access-list rate limiter ID 8 is 1 pps
Switch access-list rate limiter ID 9 is 1 pps
Switch access-list rate limiter ID 10 is 1 pps
Switch access-list rate limiter ID 11 is 1 pps
Switch access-list rate limiter ID 12 is 1 pps
Switch access-list rate limiter ID 13 is 1 pps
Switch access-list rate limiter ID 14 is 1 pps
Switch access-list rate limiter ID 15 is 1 pps
Switch access-list rate limiter ID 16 is 1 pps

GigabitEthernet 1/1 :
---------------------
```

GigabitEthernet 1/1 access-list action is permit

GigabitEthernet 1/1 access-list policy ID is 0

GigabitEthernet 1/1 access-list rate limiter ID is disabled

GigabitEthernet 1/1 access-list redirect is disabled

GigabitEthernet 1/1 access-list logging is disabled

GigabitEthernet 1/1 access-list shutdown is disabled

GigabitEthernet 1/1 access-list port-state is enabled

GigabitEthernet 1/1 access-list counter is 0

4.21.5 show access-list ace-status

Command:

show access-list ace-status [static] [link-oam] [loop-protect] [dhcp] [ptp] [upnp] [arp-inspection] [mep] [ipmc] [ip-source-guard] [ip-mgmt] [conflicts] [switch <switch_list>]

show Show running system information

access-list Access list

arp-inspection The ACEs that are configured by ARP Inspection module

conflicts The ACEs that did not get applied to the hardware due to hardware limitations

dhcp The ACEs that are configured by DHCP module

ip-source-guard The ACEs that are configured by IP Source Guard module

ipmc The ACEs that are configured by IPMC module

link-oam The ACEs that are configured by Link OAM module

loop-protect The ACEs that are configured by Loop Protect module

mep The ACEs that are configured by MEP module

ptp The ACEs that are configured by PTP module

static The ACEs that are configured by users manually

upnp The ACEs that are configured by UPnP module

Default:

N/A

Usage Guide:

To display the **ACE Status.**

Example:

To display the **ACE Status.**

Switch # **show access-list ace-status**

User

```
----

S      : Static

IPSG: IP Source Guard

IPMC: IPMC

MEP : MEP

ARPI: ARP Inspection

UPnP: UPnP

PTP : PTP

DHCP: DHCP

LOOP: Loop Protect

LOAM: Link OAM

User ID      Frame    Action Rate L.    CPU       Counter Conflict

---- --      -----    ------ -------- ------ ------- --------

DHCP 1       UDP      Deny   Disabled Yes              0 No

DHCP 2       UDP      Deny   Disabled Yes              0 No

PTP    2     EType    Deny   Disabled Yes              0 No

Switch 1 access-list ace number: 4
```

4.21.6 show aggregation

Command:

show aggregation [mode]

show Show running system information

aggregation Aggregation port configuration

mode Traffic distribution mode

Default:

N/A

Usage Guide:

To display the **Aggregation status.**

Example:

To display the **Aggregation status.**

Switch # **show aggregation**

```
AggrID    Name    Type    Speed    Configured Ports    Aggregated Ports
-------------------------------------------------------------------------------------------------
```

4.21.7 show aggregation mode

Command:

```
show aggregation [ mode ]
```

show Show running system information

aggregation Aggregation port configuration

mode Traffic distribution mode

Default:

N/A

Usage Guide:

To display the **Aggregation mode status.**

Example:

To display the **Aggregation mode status.**

```
Switch # show aggregation mode
Aggregation Mode:

SMAC  : Enabled
DMAC  : Disabled
IP    : Enabled
Port  : Enabled
```

4.21.8 show clock

Command:

```
show clock
```

show Show running system information

clock Configure time-of-day clock

Default:

N/A

Usage Guide:

To display the **system time.**

Example:

To display the **system time.**

Switch # **show clock**

System Time : 2014-01-01T00:25:51+00:00

4.21.9 show clock detail

Command:

show clock detail

show Show running system information

clock Configure time-of-day clock

detail Display detailed information

Default:

N/A

Usage Guide:

To display the detailed **system time.**

Example:

To display the detailed **system time.**

Switch # **show clock detail**

System Time : 1970-01-01T00:29:25+00:00

Timezone : Timezone Offset : 0 (0 minutes)

Timezone Acronym :

Daylight Saving Time Mode : Disabled.

Daylight Saving Time Start Time Settings :

Week: 0

Day: 0

Month: 0

Date: 0

Year: 0

Hour: 0

Minute: 0

Daylight Saving Time End Time Settings :

Week: 0

Day: 0

Month: 0

Date: 0

Year: 0

Hour: 0

Minute: 0

Daylight Saving Time Offset : 1 (minutes)

4.21.10 show dot1x statistics

Command:

show dot1x statistics

show Show running system information

dot1x IEEE Standard for port-based Network Access Control

statistics Shows statistics for either eapol or radius

all Show all dot1x statistics

eapol Show EAPOL statistics

radius Show Backend Server statistics

interface Interface

Default:

N/A

Usage Guide:

To display the **IEEE 802.1X statistics.**

Example:

To display the **All of IEEE 802.1X statistics** for **interface GigabitEthernet 1/1.**

Switch # **show dot1x statistics all interface GigabitEthernet 1/1**

GigabitEthernet 1/1 EAPOL Statistics:

```
Rx Total:                                   0
Tx Total:                                   0
Rx Response/Id:                             0
Tx Request/Id:                              0
Rx Response:                                0
Tx Request:                                 0
Rx Start:                                   0
Rx Logoff:                                  0
Rx Invalid Type:                            0
Rx Invalid Length:                          0

GigabitEthernet 1/1 Backend Server Statistics:

Rx Access Challenges:                       0
Tx Responses:                               0
Rx Other Requests:                          0
Rx Auth. Successes:                         0
Rx Auth. Failures:                          0
```

4.21.11 show dot1x status

Command:

```
show dot1x status [ interface ( <port_type> [ <v_port_type_list> ] ) ] [ brief ]
```

show Show running system information

dot1x IEEE Standard for port-based Network Access Control

status Shows dot1x status, such as admin state, port state and last source.

interface Interface

brief Show status in a brief format

Default:

N/A

Usage Guide:

To display the **IEEE 802.1X status.**

Example:

To display the **All of IEEE 802.1X status** for brief.

```
Switch # show dot1x status
```

```
GigabitEthernet 1/1 :
---------------------
Admin State          Port State          Last Source     Last ID
-----------------    ----------------    -------------   ----------
Force Authorized     Globally Disabled   -               -

Current Radius QOS   Current Radius VLAN   Current Guest VLAN
------------------   -------------------    -------------------
-                    -                      -

GigabitEthernet 1/2 :
---------------------
Admin State          Port State          Last Source     Last ID
-----------------    ----------------    -------------   ----------
Force Authorized     Globally Disabled   -               -

Current Radius QOS   Current Radius VLAN   Current Guest VLAN
------------------   -------------------    -------------------
-                    -                      -
```

4.21.12 show eps

Command:

```
show eps [ <inst> ] [ detail ]
```

show Show running system information

eps Ethernet Protection Switching

<Inst : range_list> The range of EPS instances

detail Show detailed state including configuration information

Default:

N/A

Usage Guide:

To display the **EPS instance information.**

Example:

To display the **EPS instance 1 detailed information.**

Switch # **show eps 1 detail**

EPS state is:

Inst	State	Wstate	Pstate	TxAps r b
1	Disable	Ok	Ok	NR 0 0

RxAps r b	FopPm	FopCm	FopNr	FopNoAps
NR 0 0	False	False	False	False

EPS Configuration is:

Inst	Dom	Archi	Wflow	Pflow	Wmep	Pmep
1	Port	1plus1	1	2	3	4

APSmep	Direct	Revert	Wtr	Hold	Aps
5	xxx	xxx	xxx	xxx	xxx

4.21.13 show erps

Command:

show erps [<groups>] [detail | statistics]

show Show running system information

erps Ethernet Ring Protection Switching

<groups> Zero or more ERPS group numbers

detail Show detailed information

statistics Show statistics

Default:

N/A

Usage Guide:

To display the **ERPS group** information.

Example:

To display the **ERPS group 1** detailed information.

Switch # **show erps 1 detail**

```
Grp#    Port 0          Port 1          RPL:Role    Port    Blocking
  1     Gi 1/1          Gi 1/2          -           -       -

                    Port 1 Block Status             :BLOCKED
                   R-APS Transmission               :STOPPED
                     R-APS Port 0 Reception         :NONE
                     R-APS Port 1 Reception         :NONE
                    FOP Alarm                       :OFF
```

4.21.14 show evc

Command:

```
show evc { [ <evc_id> | all ] } [ ece [ <ece_id> ] ]
```

show Show running system information

evc Ethernet Virtual Connections

<EvcId : 1-4096> EVC identifier

all Process all EVCs

ece EVC Control Entry

<EceId : 1-4096> ECE identifier

Default:

N/A

Usage Guide:

To display the **EVC status**.

Example:

To display the All of **EVC status**.

```
Switch # show evc all
EVC ID    Status
------    ------
1         Active
```

4.21.15 show evc statistics

Command:

```
show green-ethernet [ interface ( <port_type> [ <port_list> ] ) ]
```

show Show running system information

green-ethernet Green ethernet (Power reduction)

Default:

N/A

Usage Guide:

To display the **EVC statistics**.

Example:

To display the **EVC Red Frames** statistics for all.

```
Switch # show evc statistics all red
EVC ID    Interface                Rx Red Frames
------    ----------------------   --------------------
1         GigabitEthernet 1/1      0
1         GigabitEthernet 1/2      0
```

4.21.16 show green-ethernet

Command:

show green-ethernet [interface (<port_type> [<port_list>])]

show Show running system information

green-ethernet Green ethernet (Power reduction)

interface Shows green ethernet status for a specific port or ports.

Default:

N/A

Usage Guide:

To display the **Green Ethernet** status.

Example:

To display the **Green Ethernet** status for all.

Switch # **show green-ethernet interface ***

4.21.17 show green-ethernet energy-detect

Command:

show green-ethernet energy-detect [interface (<port_type> [<port_list>])]

show Show running system information

green-ethernet Green ethernet (Power reduction)

energy-detect Shows green ethernet energy-detect status for a specific port or ports.

interface Shows green ethernet status for a specific port or ports.

Default:

N/A

Usage Guide:

To display the **energy-detect** of **Green Ethernet**.

Example:

To display the **energy-detect** of **Green Ethernet** for all.

Switch # **show green-ethernet energy-detect interface ***

4.21.18 show green-ethernet short-reach

Command:

show green-ethernet short-reach [interface (<port_type> [<port_list>])]

show Show running system information

green-ethernet Green ethernet (Power reduction)

short-reach Shows green ethernet short-reach status for a specific or ports

interface Shows green ethernet status for a specific port or ports.

Default:

N/A

Usage Guide:

To display the **short-reach** of **Green Ethernet**.

Example:

To display the **short-reach** of **Green Ethernet** for all.

Switch # **show green-ethernet short-reach interface ***

4.21.19 show history

Command:

show history

show Show running system information

history Display the session command history

Default:

N/A

Usage Guide:

To display the **command** history.

Example:

To display the **command** history.

Switch # **show history**

show green-ethernet interface GigabitEthernet 1/1

show green-ethernet interface R

show green-ethernet interface *

show green-ethernet energy-detect interface *

show green-ethernet energy-detect

show green-ethernet

show green-ethernet short-reach interface *

show history

4.21.20 show interface <port_type> <port_type_list> capabilities

Command:

show interface (<port_type> [<port_type_list>]) capabilities

show Show running system information

interface Interface status and configuration

switchport Show interface switchport information

capabilities Display capabilities

Default:

N/A

Usage Guide:

To display the **SFP Transceiver** information.

Example:

To display the **SFP Transceiver** information for **interface GigabitEthernet 1/1**.

Switch # **show interface GigabitEthernet 1/1 capabilities**

GigabitEthernet 1/1 Capabilities:

SFP Type: None

SFP Vendor name:

SFP Vendor PN:

SFP Vendor revision:

4.21.21 show interface <port_type> <port_type_list> statistics

Command:

show interface <port_type> <port_type_list> statistics [{ packets | bytes | errors | discards | filtered | { priority [<priority_v_0_to_7>] } }] [{ up | down }]

show Show running system information

interface Interface status and configuration

statistics Display statistics counters

bytes Show byte statistics.

discards Show discard statistics.

down Show ports which are down

errors Show error statistics.

filtered Show filtered statistics.

packets Show packet statistics.

priority Queue number

up Show ports which are up

Default:

N/A

Usage Guide:

To display the **port statistics** information.

Example:

To display the **port statistics** information (Byte statistics) for **interface GigabitEthernet 1/1**.

Switch # **show interface GigabitEthernet 1/1 statistics bytes**

Interface	Rx Octets	Tx Octets
GigabitEthernet 1/1	0	0

4.21.22 show interface <port_type> <port_type_list> status

Command:

show interface <port_type> <port_type_list> status

show Show running system information

interface Interface status and configuration

status Display status

Default:

N/A

Usage Guide:

To display the **port status**.

Example:

To display the **port status** for **interface GigabitEthernet 1/1**.

Switch # **show interface GigabitEthernet 1/1 status**

Interface	Mode	Speed & Duplex	Max Frame	Excessive	Link
GigabitEthernet 1/1	enabled	Auto	10056	Discard	Down

4.21.23 show interface <port_type> <port_list> switchport

Command:

show interface <port_type> <port_list> switchport [access | trunk | hybrid]

show Show running system information

interface Interface status and configuration

switchport Show interface switchport information

access Show access ports status

hybrid Show hybrid ports status

trunk Show trunk ports status

Default:

N/A

Usage Guide:

To display the **VLAN mode**.

Example:

To display the **VLAN mode** for **interface GigabitEthernet 1/1**.

Switch # **show interface GigabitEthernet 1/1 switchport**

Name: GigabitEthernet 1/1

Administrative mode: access

Access Mode VLAN: 1

Trunk Native Mode VLAN: 1

```
Administrative Native VLAN tagging: disabled
Allowed VLANs: 1-4095
Hybrid port configuration
-------------------------
Port Type: C-Port
Acceptable Frame Type: All
Ingress filter: Disabled
Egress tagging: All except-native
Hybrid Native Mode VLAN: 1
Hybrid VLANs Enabled: 1-4095
```

4.21.24 show interface <port_type> <port_type_list> veriphy

Command:

```
show interface <port_type> <port_type_list> veriphy
```

show Show running system information

interface Interface status and configuration

veriphy Run cable diagnostics and show result.

Default:

N/A

Usage Guide:

To display the result of **Cable Diagnostics**.

Example:

To display the result of **Cable Diagnostics** for **interface GigabitEthernet 1/1**.

```
Switch # show interface GigabitEthernet 1/1 veriphy
Starting VeriPHY - Please wait
Interface                Pair A   Length   Pair B, Length
----------------------   ------   ------   -------  -------
GigabitEthernet 1/1      OK       3        OK       3

Pair C   Length   Pair D   Length
------   ------   ------   -------
OK       3        OK       3
```

4.21.25 show interface <port_type> <port_type_list> veriphy

Command:

show interface <port_type> <port_type_list> veriphy

show Show running system information

interface Interface status and configuration

veriphy Run cable diagnostics and show result.

Default:

N/A

Usage Guide:

To display the result of **Cable Diagnostics**.

Example:

To display the result of **Cable Diagnostics** for **interface GigabitEthernet 1/1**.

Switch # **show interface GigabitEthernet 1/1 veriphy**

Starting VeriPHY - Please wait

Interface	Pair A	Length	Pair B, Length	
GigabitEthernet 1/1	OK	3	OK	3

Pair C	Length	Pair D	Length
OK	3	OK	3

4.21.26 show interface vlan

Command:

show interface vlan [<vlist>]

show Show running system information

interface Interface status and configuration

vlan VLAN status

Default:

N/A

Usage Guide:

To display the MAC address and IP address of specific VLAN.

Example:

To display the MAC address and IP address for all VLANs.

```
Switch # show interface vlan
VLAN1
LINK: 00-30-4F-00-99-00 Mtu:1500 <UP BROADCAST RUNNING MULTICAST>
IPv4: 192.168.0.100/24 192.168.0.255
IPv6: fe80:2::201:c1ff:fe00:9900/64 <ANYCAST TENTATIVE AUTOCONF>
```

4.21.27 show ip arp

Command:

```
show ip arp
```

show Show running system information

ip Internet Protocol

arp Address Resolution Protocol

Default:

N/A

Usage Guide:

To display the **ARP table**.

Example:

To display the **ARP table** for all.

```
Switch # show ip arp
192.168.0.45 via VLAN1:d4-3d-7e-fd-e3-ac
192.168.0.78 via VLAN1:00-30-4f-97-72-2d
```

4.21.28 show ip arp inspection

Command:

```
show ip arp inspection
```

show Show running system information

ip Internet Protocol

arp Address Resolution Protocol

inspection ARP inspection

Default:

N/A

Usage Guide:

To display the **ARP Inspection Configuration**.

Example:

To display the **ARP Inspection Configuration**.

```
Switch # show ip arp inspection
ARP Inspection Mode : disabled

Port                    Port Mode   Check VLAN   Log Type
----                    ----------  -----------  --------
GigabitEthernet 1/1     disabled    disabled     NONE
GigabitEthernet 1/2     disabled    disabled     NONE
```

4.21.29 show ip arp inspection

Command:

```
show ip arp inspection [ interface <port_type> <port_type_list> ] | vlan <vlan_list> ]
```

show Show running system information

ip Internet Protocol

arp Address Resolution Protocol

inspection ARP inspection

interface Interface status and configuration

vlan VLAN status

Default:

N/A

Usage Guide:

To display the **ARP Inspection Configuration**.

Example:

To display the **ARP Inspection Configuration**.

```
Switch # show ip arp inspection
ARP Inspection Mode : disabled

Port                    Port Mode   Check VLAN   Log Type
----                    ---------   ----------   --------
GigabitEthernet 1/1     disabled    disabled     NONE
GigabitEthernet 1/2     disabled    disabled     NONE
```

4.21.30 show ip arp inspection entry

Command:

```
show ip arp inspection entry [ dhcp-snooping | static ] [ interface ( <port_type>
[ <port_type_list> ] ) ]
```

show Show running system information

ip Internet Protocol

arp Address Resolution Protocol

inspection ARP inspection

entry arp inspection entries

dhcp-snooping learn from dhcp snooping

static setting from static entries

interface arp inspection entry interface config

Default:

N/A

Usage Guide:

To display the **ARP Inspection entry**.

Example:

To display the **ARP Inspection entry**.

```
Switch # show ip arp inspection entry
```

4.21.31 show ip dhcp detailed statistics

Command:

show ip dhcp detailed statistics { server | client | snooping | relay | normal-forward | combined }

[interface (<port_type> [<port_list>])]

show Show running system information

ip Internet Protocol

dhcp Dynamic Host Configuration Protocol

detailed DHCP server

statistics Traffic statistics

client DHCP client

combined Show all DHCP related statistics

normal-forward DHCP normal L2 or L3 forward

relay DHCP relay

server DHCP server

snooping DHCP snooping

interface arp inspection entry interface config

Default:

N/A

Usage Guide:

To display the **DHCP detailed statistics**.

Example:

To display the **DHCP detailed statistics (Client) for GigabitEthernet 1/1**.

Switch # **show ip dhcp detailed statistics client interface GigabitEthernet 1/1**

GigabitEthernet 1/1 Statistics:

```

4.21.32 show ip dhcp excluded-address

Command:

```
show ip dhcp excluded-address
```

show Show running system information

ip Internet Protocol

dhcp Dynamic Host Configuration Protocol

excluded-address Excluded IP database

Default:

N/A

Usage Guide:

To display the **excluded IP range**.

Example:

To display the **excluded IP range**.

```
Switch # show ip dhcp excluded-address

      Low Address          High Address
      ---------------    ---------------
01    192.168.0.100        192.168.0.101
```

4.21.33 show ip dhcp pool

Command:

show ip dhcp pool [<pool_name>]

show Show running system information

ip Internet Protocol

dhcp Dynamic Host Configuration Protocol

pool DHCP pools information

Default:

N/A

Usage Guide:

To display the **DHCP pools** information.

Example:

To display the **DHCP pools** information.

```
Switch # show ip dhcp pool

Pool Name: test
-----------------------------------------------
Type is network
IP is 192.168.1.100
Subnet mask is 255.255.255.0
Subnet broadcast address is -
Lease time is 1 days 0 hours 0 minutes
Default router is 192.168.1.1
Domain name is -
DNS servers are 168.95.1.1 8.8.8.8
NTP server is -
Netbios name server is -
Netbios node type is -
Netbios scope identifier is -
NIS domain name is -
NIS server is -
Vendor class information is -
Client identifier is -
```

Hardware address is -
Client name is -

4.21.34 show ip dhcp relay

Command:

show ip dhcp relay [statistics]

show Show running system information

ip Internet Protocol

dhcp Dynamic Host Configuration Protocol

relay DHCP relay agent configuration

statistics Traffic statistics

Default:

N/A

Usage Guide:

To display the **DHCP relay** information.

Example:

To display the **DHCP relay** information.

Switch # **show ip dhcp relay**
Switch DHCP relay mode is enabled
Switch DHCP relay server address is 192.168.0.76
Switch DHCP relay information option is enabled
Switch DHCP relay information policy is keep

4.21.35 show ip dhcp server

Command:

show ip dhcp server

show Show running system information

ip Internet Protocol

dhcp Dynamic Host Configuration Protocol

server DHCP server information

Default:

N/A

Usage Guide:

To display the **DHCP Server Mode Configuration**.

Example:

To display the **DHCP Server Mode Configuration**.

```
Switch # show ip dhcp server

DHCP server is globally disabled.
All VLANs are disabled.
```

4.21.36 show ip dhcp server binding (GG)

Command:

```
show ip dhcp server binding [ state { allocated | committed | expired } ] [ type { automatic | manual |
expired } ] [ <ip> ]
```

show Show running system information

ip Internet Protocol

dhcp Dynamic Host Configuration Protocol

server DHCP server information

binding DHCP address bindings

state State of binding

allocated Allocated state

committed Committed state

expired Expired state

type Type of binding

automatic Automatic binding with infinite lease time

expired Expired binding that is aged out

manual Manual binding for a specific host

<ip> IP address in dotted-decimal notation

Default:

N/A

Usage Guide:

To display the **DHCP Server binding configuration**.

Example:

To display the **DHCP Server binding configuration**.

Switch # **show ip dhcp server binding**

4.21.37 show ip dhcp server declined-ip (GG)

Command:

show ip dhcp server declined-ip

show Show running system information

ip Internet Protocol

dhcp Dynamic Host Configuration Protocol

server DHCP server information

declined-ip Declined IP address

Default:

N/A

Usage Guide:

To display the **DHCP Decline** information.

Example:

To display the **DHCP Decline** information.

Switch # **show ip dhcp server declined-ip**

4.21.38 show ip dhcp server statistics

Command:

show ip dhcp server statistics

show Show running system information

ip Internet Protocol

dhcp Dynamic Host Configuration Protocol

server DHCP server information

statistics DHCP server statistics

Default:

N/A

Usage Guide:

To display the **DHCP Server** statistics.

Example:

To display the **DHCP Server** statistics.

```
Switch # show ip dhcp server statistics

```

4.21.39 show ip dhcp snooping

Command:

show ip dhcp snooping [interface (<port_type> [<port_list>])]

show Show running system information

ip Internet Protocol

dhcp Dynamic Host Configuration Protocol

snooping DHCP snooping

interface Select an interface to configure

Default:

N/A

Usage Guide:

To display the **DHCP Snooping** configuration.

Example:

To display the **DHCP Snooping** configuration for **GigabitEthernet 1/1**.

Switch # **show ip dhcp snooping interface GigabitEthernet 1/1**
GigabitEthernet 1/1 untrusted

4.21.40 show ip dhcp snooping table

Command:

show ip dhcp snooping table

show Show running system information

ip Internet Protocol

dhcp Dynamic Host Configuration Protocol

snooping DHCP snooping

table show ip dhcp snooping table

Default:

N/A

Usage Guide:

To display the **DHCP Snooping** table.

Example:

To display the **DHCP Snooping** table.

Switch # **show ip dhcp snooping table**

4.21.41 show ip http server secure status

Command:

show ip http server secure status

show Show running system information

ip Internet Protocol

http Hypertext Transfer Protocol

server HTTP web server

secure Secure

status Status

Default:

N/A

Usage Guide:

To display the **DHCP Snooping** table.

Example:

To display the **DHCP Snooping** table.

Switch # **show ip http server secure status**

Switch secure HTTP web server is disabled

Switch secure HTTP web redirection is disabled

4.21.42 show ip igmp snooping

Command:

show ip igmp snooping [vlan <vlan_list>] [group-database [interface (<port_type>

[<port_type_list>])] [sfm-information]] [detail]

show Show running system information

ip Internet Protocol

igmp Internet Group Management Protocol

snooping Snooping IGMP

vlan Search by VLAN

group-database Multicast group database from IGMP

interface Search by port

sfm-information Including source filter multicast information from IGMP

detail Detail running information/statistics of IGMP snooping

Default:

N/A

Usage Guide:

To display the **IGMP Snooping** information.

Example:

To display the **IGMP Snooping** information (Detail).

```
Switch # show ip igmp snooping detail

IGMP Snooping is disabled to stop snooping IGMP control plane.
Multicast streams destined to unregistered IGMP groups will be flooding.
```

4.21.43 show ip igmp snooping mrouter

Command:

```
show ip igmp snooping mrouter [ detail ]
```

show Show running system information

ip Internet Protocol

igmp Internet Group Management Protocol

snooping Snooping IGMP

mrouter Multicast router port status in IGMP

detail Detail running information/statistics of IGMP snooping

Default:

N/A

Usage Guide:

To display the **IGMP Router Port** information.

Example:

To display the **IGMP Router Port** information.

Switch # **show ip igmp snooping mrouter**

IGMP Snooping is disabled to stop snooping IGMP control plane.

Switch-1 IGMP Router Port Status

Gi 1/1: Static and Dynamic Router Port

4.21.44 show ip interface brief

Command:

show ip interface brief

show Show running system information

ip Internet Protocol

interface IP interface status and configuration

brief Brief IP interface status

Default:

N/A

Usage Guide:

To display the **IP interface status**.

Example:

To display the **IP interface status**.

Switch # **show ip interface brief**

Vlan	Address	Method	Status
1	192.168.0.100/24	Manual	UP

4.21.45 show ip name-server

Command:

show ip name-server

show Show running system information

ip Internet Protocol

name-server Domain Name System

Default:

N/A

Usage Guide:

To display the **DNS Server** information.

Example:

To display the **DNS Server** information.

```
Switch # show ip name-server

Current DNS server is 8.8.8.8 set by STATIC.
```

4.21.46 show ip route

Command:

```
show ip route
```

show Show running system information

ip Internet Protocol

route Display the current ip routing table

Default:

N/A

Usage Guide:

To display the **IP Routing table**.

Example:

To display the **IP Routing table**.

```
Switch # show ip route
11.11.11.0/24 via 192.168.0.14 <UP GATEWAY HW_RT>
127.0.0.1/32 via 127.0.0.1 <UP HOST>
192.168.0.0/24 via VLAN1 <UP HW_RT>
224.0.0.0/4 via 127.0.0.1 <UP>
```

4.21.47 show ip source binding

Command:

show ip source binding [dhcp-snooping | static] [interface (<port_type> [<port_type_list>])]

show Show running system information

ip Internet Protocol

source source command

binding ip source binding

dhcp-snooping learn from dhcp snooping

interface ip source binding interface config

static setting from static entries

Default:

N/A

Usage Guide:

To display the **Static IP Source Guard Table**.

Example:

To display the **Static IP Source Guard Table**.

Switch # **show ip source binding interface GigabitEthernet 1/1**

Type	Port	VLAN	IP Address	IP Mask
----	----	----	----------	-------
Static	GigabitEthernet 1/1	1	192.168.0.22	255.255.255.0

4.21.48 show ip ssh

Command:

show ip ssh

show Show running system information

ip Internet Protocol

ssh Secure Shell

Default:

N/A

Usage Guide:

To display the **SSH Management** status.

Example:

To display the **SSH Management** status.

```
Switch # show ip ssh
Switch SSH is enabled
```

4.21.49 show ip statistics

Command:

```
show ip statistics
```

show Show running system information

ip Internet Protocol

statistics Traffic statistics

Default:

N/A

Usage Guide:

To display the **IP statistics**.

Example:

To display the **IP statistics**.

```
Switch # show ip statistics

IPv4 statistics:

Rcvd:  9751 total in 1454882 bytes
9606 local destination, 0 forwarding
0 header error, 0 address error, 0 unknown protocol
0 no route, 0 truncated, 145 discarded
Sent:  8087 total in 2703484 bytes
8087 generated, 0 forwarded
0 no route, 0 discarded
Frags: 0 reassemble (0 reassembled, 0 couldn't reassemble)
0 fragment (0 fragmented, 0 couldn't fragment)
0 fragment created
Mcast: 913 received in 99661 bytes
```

0 sent in 0 byte

Bcast: 768 received, 0 sent

IP interface statistics:

IPv4 Statistics on Interface VLAN: 1

Rcvd: 9751 total in 1454882 bytes

9606 local destination, 0 forwarding

0 header error, 0 address error, 0 unknown protocol

0 no route, 0 truncated, 145 discarded

Sent: 8087 total in 2703484 bytes

8087 generated, 0 forwarded

0 discarded

Frags: 0 reassemble (0 reassembled, 0 couldn't reassemble)

0 fragment (0 fragmented, 0 couldn't fragment)

0 fragment created

Mcast: 913 received in 99661 bytes

0 sent in 0 byte

Bcast: 768 received, 0 sent

IPv4 ICMP statistics:

Rcvd: 2618 Messages, 0 Error

Sent: 2618 Messages, 0 Error

ICMP message statistics:

IPv4 ICMP Message: Echo Reply

Rcvd: 0 Packet

Sent: 2618 Packets

IPv4 ICMP Message: Echo

Rcvd: 2618 Packets

Sent: 0 Packet

4.21.50 show ip verify source

Command:

show ip verify source [interface (<port_type> [<port_type_list>])]

show Show running system information

ip Internet Protocol

verify verify command

source verify source

interface ip verify source interface config

Default:

N/A

Usage Guide:

To display the **IP Source Guard** configuration.

Example:

To display the **IP Source Guard** configuration for **GigabitEthernet 1/1**.

```
Switch # show ip verify source interface GigabitEthernet 1/1

Port                    Port Mode       Dynamic Entry Limit
----                    ---------       -------------------
GigabitEthernet 1/1     enabled         1
```

4.21.51 show ipmc profile

Command:

```
show ipmc profile [ <profile_name> ] [ detail ]
```

show Show running system information

ipmc IPv4/IPv6 multicast configuration

profile IPMC profile configuration

<ProfileName : word16> Profile name

detail Detail information of a profile

Default:

N/A

Usage Guide:

To display the **IP Multicast Profile**.

Example:

To display the **IP Multicast Profile**.

Switch # **show ipmc profile**

IPMC Profile is now enabled to start filtering.

Profile: 1 (In VER-INI Mode)

Description: test

4.21.52 show ipmc range

Command:

show ipmc range [<entry_name>]

show Show running system information

ipmc IPv4/IPv6 multicast configuration

range A range of IPv4/IPv6 multicast addresses for the profile

<EntryName : word16> Range entry name

Default:

N/A

Usage Guide:

To display the **IP Multicast Range**.

Example:

To display the **IP Multicast Range**.

Switch # **show ipmc range**

Range Name : 1

Start Address: 224.24.24.24

End Address : 224.24.24.25

4.21.53 show ipv6 interface

Command:

show ipv6 interface [vlan <vlan_list> { brief | statistics }]

show Show running system information

ipv6 IPv6 configuration commands

vlan VLAN of IPv6 interface

brief Brief summary of IPv6 status and configuration

statistics Traffic statistics

Default:

N/A

Usage Guide:

To display the **IPv6 configuration**.

Example:

To display the **IPv6 configuration**.

```
Switch # show ipv6 interface

IPv6 Vlan1 interface is up.
Internet address is 2001::7766
Internet address is fe80::201:c1ff:fe00:9900
Static address is 2001::7766/64
IP stack index (IFID) is 2
Routing is enabled on this interface
MTU is 1500 bytes

IPv6 Statistics on Interface VLAN: 1
Rcvd:    3 total in 168 bytes
3 local destination, 0 forwarding
0 header error, 0 address error, 0 unknown protocol
0 no route, 0 truncated, 0 discarded
Sent:    17 total in 1104 bytes
17 generated, 0 forwarded
0 discarded
Frags: 0 reassemble (0 reassembled, 0 couldn't reassemble)
0 fragment (0 fragmented, 0 couldn't fragment)
0 fragment created
Mcast: 3 received in 168 bytes
17 sent in 1104 bytes
Bcast: 0 received, 0 sent
```

4.21.54 show ipv6 mld snooping

Command:

show ipv6 mld snooping [vlan <vlan_list>] [group-database [interface (<port_type> [<port_type_list>])] [sfm-information]] [detail]

show Show running system information

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

vlan Search by VLAN

group-database Multicast group database from MLD

interface Search by port

sfm-information Including source filter multicast information from MLD

detail Detail running information/statistics of MLD snooping

Default:

N/A

Usage Guide:

To display the **MLD Snooping** information.

Example:

To display the **MLD Snooping** information (Detail).

Switch # **show ipv6 mld snooping detail** MLD Snooping is disabled to stop snooping MLD control plane. Multicast streams destined to unregistered MLD groups will be flooding.

4.21.55 show ipv6 mld snooping mrouter

Command:

show ip igmp snooping mrouter [detail]

show Show running system information

ipv6 IPv6 configuration commands

mld Multicast Listener Discovery

snooping Snooping MLD

mrouter Multicast router port status in MLD

detail Detail running information/statistics of MLD snooping

Default:

N/A

Usage Guide:

To display the **MLD Router Port** information.

Example:

To display the **MLD Router Port** information.

Switch # **show ipv6 mld snooping mrouter**

MLD Snooping is enabled to start snooping MLD control plane.

Switch-1 MLD Router Port Status

Gi 1/1: Static and Dynamic Router Port

4.21.56 show ipv6 neighbor

Command:

show ipv6 neighbor [interface vlan <vlan_list>]

show Show running system information

ipv6 IPv6 configuration commands

neighbor IPv6 neighbors

interface Select an interface to configure

vlan VLAN of IPv6 interface

Default:

N/A

Usage Guide:

To display the **IPv6 neighbor** information.

Example:

To display the **IPv6 neighbor** information.

Switch # **show ipv6 neighbor**

2001::7766 via VLAN1: 00-30-4F-00-99-00 Permanent/REACHABLE

fe80::201:c1ff:fe00:9900 via VLAN1: 00-30-4F-00-99-00 Permanent/REACHABLE

4.21.57 show ipv6 route

Command:

show ipv6 route [interface vlan <vlan_list>]

show Show running system information

ipv6 IPv6 configuration commands

route IPv6 routes

interface Select an interface to configure

vlan VLAN of IPv6 interface

Default:

N/A

Usage Guide:

To display the **IPv6 Routing table**.

Example:

To display the **IPv6 Routing table**.

Switch # **show ipv6 route**
::1/128 via ::1 <UP HOST>
2001::/64 via VLAN1 <UP HW_RT>
2001::7766/128 via 1:c100:9900:: <UP HOST>
2002::/64 via 2001::7788 <UP GATEWAY HW_RT>

4.21.58 show ipv6 statistics

Command:

show ipv6 statistics [system] [interface vlan <vlan_list>] [icmp] [icmp-msg <type>]

show Show running system information

ipv6 IPv6 configuration commands

statistics Traffic statistics

icmp IPv6 ICMP traffic

icmp-msg IPv6 ICMP traffic for designated message type

<Type : 0~255> ICMP message type ranges from 0 to 255

interface Select an interface to configure

vlan IPv6 interface traffic

system IPv6 system traffic

Default:

N/A

Usage Guide:

To display the **IPv6 statistics**.

Example:

To display the **IPv6 statistics**.

Switch # **show ipv6 statistics**

IPv6 statistics:

Rcvd: 24 total in 2064 bytes

6 local destination, 0 forwarding

0 header error, 0 address error, 0 unknown protocol

0 no route, 0 truncated, 18 discarded

Sent: 34 total in 2208 bytes

38 generated, 0 forwarded

0 no route, 0 discarded

Frags: 0 reassemble (0 reassembled, 0 couldn't reassemble)

0 fragment (0 fragmented, 0 couldn't fragment)

0 fragment created

Mcast: 24 received in 2064 bytes

34 sent in 2208 bytes

Bcast: 0 received, 0 sent

IP interface statistics:

IPv6 Statistics on Interface VLAN: 1

Rcvd: 12 total in 1032 bytes

Sent: 17 total in 1104 bytes

17 generated, 0 forwarded

0 discarded

Frags: 0 reassemble (0 reassembled, 0 couldn't reassemble)

0 fragment (0 fragmented, 0 couldn't fragment)

0 fragment created

Mcast: 12 received in 1032 bytes

17 sent in 1104 bytes

Bcast: 0 received, 0 sent

IPv6 ICMP statistics:

Rcvd: 3 Messages, 0 Error

Sent: 19 Messages, 0 Error

ICMP message statistics:

IPv6 ICMP Message: Multicast Listener Report

Rcvd: 0 Packet

Sent: 10 Packets

IPv6 ICMP Message: Router Solicitation (NDP)

Rcvd: 3 Packets

Sent: 6 Packets

IPv6 ICMP Message: Neighbor Solicitation (NDP)

Rcvd: 0 Packet

Sent: 3 Packets

4.21.59 show lacp

Command:

show lacp { internal | statistics | system-id | neighbour }

show Show running system information

lacp LACP configuration/status

internal Internal LACP configuration

neighbour Neighbour LACP status

statistics Internal LACP statistics

system-id LACP system id

Default:

N/A

Usage Guide:

To display the **LACP mode** information.

Example:

To display the **LACP mode** information.

```
Switch # show lacp internal
Port              Mode      Key    Role     Timeout   Priority
----------------  --------  ----   ------   -------   --------
Gi 1/1            Enabled   Auto   Active   Fast      32768
Gi 1/2            Enabled   Auto   Active   Fast      32768
Gi 1/3            Disabled  Auto   Active   Fast      32768
```

4.21.60 show line

Command:

```
show line [ alive ]
```

show Show running system information

line TTY line information

alive Display information about alive lines

Default:

N/A

Usage Guide:

To display the **VTY** information.

Example:

To display the **VTY** information.

```
Switch # show line alive
Line is con 0.
* You are at this line now.
Alive from Console.
Default privileged level is 2.
Command line editing is enabled
Display EXEC banner is enabled.
Display Day banner is enabled.
Terminal width is 80.
length is 24.
```

```
history size is 32.
exec-timeout is 10 min 0 second.

Current session privilege is 15.
Elapsed time is 0 day 0 hour 17 min 20 sec.
Idle time is 0 day 0 hour 0 min 0 sec.
```

4.21.61 show lldp med media-vlan-policy

Command:

```
show lldp med media-vlan-policy [<0~31>]
```

show Show running system information

lldp Display LLDP neighbors information

med Display LLDP-MED neighbors information

media-vlan-policy Display media vlan policies

<0~31> List of policies

Default:

N/A

Usage Guide:

To display the **LLDP-MED policy** information.

Example:

To display the **LLDP-MED policy** information.

```
Switch # show lldp med media-vlan-policy
  Policy Id   Application Type        Tag      Vlan ID   L2 Priority   DSCP
      0           Voice               Tagged     1          0          0
```

4.21.62 show lldp med remote-device

Command:

```
show lldp med remote-device [ interface ( <port_type> [ <port_list> ] ) ]
```

show Show running system information

lldp Display LLDP neighbors information

med Display LLDP-MED neighbors information

remote-device Display remote device LLDP-MED neighbors information

interface Interface to display

Default:

N/A

Usage Guide:

To display the **LLDP-MED entries** information.

Example:

To display the **LLDP-MED entries** information.

Switch # **show lldp med remote-device**
No LLDP-MED entries found

4.21.63 show lldp neighbors

Command:

show lldp neighbors [interface (<port_type> [<port_type_list>])]

show Show running system information

lldp Display LLDP neighbors information

neighbors Display LLDP neighbors information

interface Interface to display

Default:

N/A

Usage Guide:

To display the **LLDP neighbors** information.

Example:

To display the **LLDP neighbors** information.

Switch # **show lldp neighbors**
No LLDP entries found

4.21.64 show lldp statistics

Command:

show lldp statistics [interface (<port_type> [<port_type_list>])]

show Show running system information

lldp Display LLDP neighbors information

statistics Display LLDP statistics information

interface Interface to display

Default:

N/A

Usage Guide:

To display the **LLDP statistics** information.

Example:

To display the **LLDP statistics** information for **GigabitEthernet 1/1**.

```
Switch # show lldp statistics interface GigabitEthernet 1/1
                              Rx          Tx          Rx
  Interface                   Frames      Frames      Errors

  GigabitEthernet 1/1         0           3030        0

        Rx          Rx TLV    Rx TLV      Rx TLV
    Discards  Errors  Unknown   Organiz.  Aged
    --------  ------  -------   --------  ----
    0         0       0         0         0
```

4.21.65 show logging

Command:

```
show logging {<log_id> | error | info | warning } [ switch <switch_list> ]
```

show Show running system information

logging Syslog

<logging_id: 1-4294967295> Logging ID

switch Switch

<switch_list> Switch ID list in 1

Default:

N/A

Usage Guide:

To display the **Syslog** information.

Example:

To display the **Syslog** information with Log ID 235861.

```
Switch # show logging 235861
Switch : 1
ID       : 235861
Level    : Warning
Time     : 1970-01-01T13:33:57+00:00
Message:
Loop Detected: Port 5 shut down
```

4.21.66 show loop-protect

Command:

```
show loop-protect [ interface ( <port_type> [ <port_list> ] ) ]
```

show Show running system information

loop-protect Loop protection configuration

interface Interface status and configuration

Default:

N/A

Usage Guide:

To display the **Loop protection** information.

Example:

To display the **Loop protection** information for **GigabitEthernet 1/1**.

```
Switch # show loop-protect interface GigabitEthernet 1/1

Loop Protection Configuration
======================================
Loop Protection      : Enable
Transmission Time : 2 sec
Shutdown Time        : 2 sec

GigabitEthernet 1/1
---------------------------
```

```
Loop protect mode is enabled.
Actions are both of shutdown and log.
Transmit mode is enabled.
No loop.
The number of loops is 12390.
Time of last loop is at 1970-01-01T14:58:28+00:00
Status is down.
```

4.21.67 show mac address-table

Command:

```
show mac address-table [ conf | static | aging-time | { { learning | count } [ interface ( <port_type>
[ <port_type_list> ] ) ] } | { address <mac_addr> [ vlan <vlan_id> ] } | vlan <vlan_id_1> | interface
( <port_type> [ <port_type_list> ] ) ]
```

show Show running system information

mac MAC Address Table information

address-table MAC Address Table

address MAC address lookup

aging-time Aging time

conf User added static MAC addresses

count Total number of MAC addresses

interface Select an interface to configure

learning Learn/disable/secure state

static All static MAC addresses

vlan Addresses in this VLAN

Default:

N/A

Usage Guide:

To display the **MAC address table**.

Example:

To display the **MAC address table** for **VLAN 1**.

```
Switch # show mac address-table vlan 1
Type VID MAC Address Ports
Static 1 33:33:00:00:00:01 GigabitEthernet 1/1-25 10GigabitEthernet 1/1-4 CPU
```

```

DHOLD:   TRUE

SSM State is:
Interface                Tx SSM       Rx SSM Mode
GigabitEthernet 1/1      QL_NONE      QL_LINK Master
```

4.21.71 show ntp status

Command:

show ntp status

show Show running system information

ntp Configure NTP

status status

Default:

N/A

Usage Guide:

To display the **NTP Server** information.

Example:

To display the **NTP Server** information.

```
Switch # show ntp status
NTP Mode : enabled
Idx     Server IP host address (a.b.c.d) or a host name string
---     ----------------------------------------------------
1       192.168.0.44
2
3
4
5
```

4.21.72 show platform phy

Command:

show platform phy [interface (<port_type> [<port_type_list>])]

show Show running system information

platform Platform specific information

phy PHYs' information

interface Search by port

Default:

N/A

Usage Guide:

To display the **PHY** information.

Example:

To display the **PHY** information for **GigabitEthernet 1/1**.

Switch # **show platform phy interface GigabitEthernet 1/1**

Port	API Inst	WAN/LAN/1G	Mode	Duplex	Speed	Link
1	Default	1G	ANEG	-	-	No

4.21.73 show platform phy failover

Command:

show platform phy failover

show Show running system information

platform Platform specific information

phy PHYs' information

failover Failover status

Default:

N/A

Usage Guide:

To display the **PHY** failover status.

Example:

To display the **PHY** failover status.

Switch # **show platform phy failover**

Port	Active	Channel	Broadcast	After reset

4.21.74 show platform phy id

Command:

show platform phy id [interface (<port_type> [<port_type_list>])]

show Show running system information

platform Platform specific information

phy PHYs' information

id id

interface Search by port

Default:

N/A

Usage Guide:

To display the **PHY** ID.

Example:

To display the **PHY** ID for **GigabitEthernet 1/1**.

Switch # **show platform phy id interface GigabitEthernet 1/1**

Port	Channel	API Base	Phy Id	Phy Rev.
1	0	0 (1g)	8634	0

4.21.75 show platform phy status

Command:

show platform phy status [interface (<port_type> [<v_port_type_list>])]

show Show running system information

platform Platform specific information

phy PHYs' information

status status

interface Search by port

Default:

N/A

Usage Guide:

To display the **PHY** status.

Example:

To display the **PHY** status.

Switch # **show platform phy status interface GigabitEthernet 1/1**

Port	Issues seen during 1G PHY warmstart	Issues during 10G PHY WS
1	No	No

4.21.76 show port-security port

Command:

show port-security port [interface (<port_type> [<port_type_list>])]

show Show running system information

port-security port-security

port Show MAC Addresses learned by Port Security

interface Search by port

Default:

N/A

Usage Guide:

To display the **MAC Addresses** of **Port Security**.

Example:

To display the **MAC Addresses** of **Port Security**.

Switch # **show port-security port interface GigabitEthernet 1/1**

GigabitEthernet 1/1

MAC Address	VID	State	Added	Age/Hold Time
<none>				

4.21.77 show port-security switch

Command:

show port-security switch [interface (<port_type> [<port_type_list>])]

show Show running system information

port-security port-security

switch Show Port Security status

interface Search by port

Default:

N/A

Usage Guide:

To display the status of **Port Security**.

Example:

To display the status of **Port Security**.

```
Switch # show port-security switch interface GigabitEthernet 1/1
Users:
L = Limit Control
8 = 802.1X
D = DHCP Snooping
V = Voice VLAN
Interface               Users   State       MAC Cnt
----------------------  -----   ----------  -------
GigabitEthernet 1/1     ----    No users    0
```

4.21.78 show privilege

Command:

```
show privilege
```

show Show running system information

privilege Display command privilege

Default:

N/A

Usage Guide:

To display the **Privilege** information.

Example:

To display the **Privilege** information.

```
Switch # show privilege
```

4.21.79 show pvlan

Command:

show pvlan [<pvlan_list>]

show Show running system information

pvlan PVLAN configuration

Default:

N/A

Usage Guide:

To display the Private VLAN membership configuration.

Example:

To display the Private VLAN membership configuration for all VLANs.

```
Switch # show pvlan
PVLAN ID    Ports
--------    --------------------------------------------------------------------------
1           GigabitEthernet 1/1, GigabitEthernet 1/2, GigabitEthernet 1/3,
```

4.21.80 show pvlan isolation

Command:

show pvlan isolation [interface (<port_type> [<port_list>])]

show Show running system information

pvlan PVLAN configuration

isolation show isolation configuration

interface Search by port

Default:

N/A

Usage Guide:

To display the port isolation configuration.

Example:

To display the port isolation configuration.

Switch # **show pvlan isolation**

Port	Isolation
GigabitEthernet 1/1	Disabled
GigabitEthernet 1/2	Disabled
GigabitEthernet 1/3	Disabled

4.21.81 show qos

Command:

show qos [{ interface [(<port_type> [<port>])] } | wred | { maps [dscp-cos] [dscp-ingress-translation] [dscp-classify] [cos-dscp] [dscp-egress-translation] } | { qce [<qce>] }]

show Show running system information

qos Quality of Service

interface Interface

maps Global QoS Maps/Tables

cos-dscp Map for cos to dscp

dscp-classify Map for dscp classify enable

dscp-cos Map for dscp to cos

dscp-egress-translation Map for dscp egress translation

dscp-ingress-translation Map for dscp ingress translation

qce QoS Control Entry

<qce> QCE ID

wred Weighted Random Early Discard

Default:

N/A

Usage Guide:

To display the **QoS** configuration.

Example:

To display the **QoS** configuration for **GigabitEthernet 1/1**.

```
Switch # show qos interface GigabitEthernet 1/1
interface GigabitEthernet 1/1
qos cos 0
qos pcp 0
qos dpl 0
```

4.21.82 show radius-server

Command:

```
show radius-server [ statistics ]
```

show Show running system information

radius-server RADIUS configuration

statistics RADIUS statistics

Default:

N/A

Usage Guide:

To display the **RADIUS Server** configuration.

Example:

To display the **RADIUS Server** configuration.

```
Switch # show radius-server
Global RADIUS Server Timeout          : 5 seconds
Global RADIUS Server Retransmit       : 3 times
Global RADIUS Server Deadtime         : 0 minutes
Global RADIUS Server Key              :
Global RADIUS Server Attribute 4      :
Global RADIUS Server Attribute 95     :
Global RADIUS Server Attribute 32     :
No hosts configured!
```

4.21.83 show rmon alarm

Command:

```
show rmon alarm [ <id_list> ]
```

show Show running system information

rmon RMON statistics

alarm Display the RMON alarm table

Default:

N/A

Usage Guide:

To display the **RMON Alarm** configuration.

Example:

To display the **RMON Alarm ID 1** configuration.

```
Switch # show rmon alarm 1

Alarm ID :          1
-----------------
Interval                : 30
Variable                : .1.3.6.1.2.1.2.2.1.20.1

interface Show specific interface(s)

vlan VLAN

line Show line settings

console Console

vty VTY

Default:

N/A

Usage Guide:

To display the **running-config**.

Example 1:

To display the **running-config**.

```
Switch # show running-config
Building configuration...
username admin privilege 15 password none
loop-protect
loop-protect transmit-time 2
loop-protect shutdown-time 2
!
vlan 1
!
!
!
```

Example 2:

To display the **running-config** with filtered **MVR** function

```
Switch # show running-config feature mvr
Building configuration...
!
vlan 1
!
!
!
mvr
mvr vlan 1 name 1
```

4.21.88 show snmp

Command:

show snmp

show Show running system information

snmp Display SNMP configurations

Default:

N/A

Usage Guide:

To display the **SNMP** information.

Example:

To display the **SNMP** information

```
Switch # show snmp

SNMP Configuration

4.21.93 show snmp mib ifmib ifIndex

Command:

show snmp mib ifmib ifIndex

show Show running system information

snmp Display SNMP configurations

mib MIB(Management Information Base)

ifmib IF-MIB

ifIndex The IfIndex that is defined in IF-MIB

Default:

N/A

Usage Guide:

To display the **SNMP MIB ifIndex contexts**.

Example:

To display the **SNMP MIB ifIndex contexts.**

Switch # **show snmp mib ifmib ifIndex**

ifIndex	ifDescr	Interface
1	Switch 1 - Port 1	GigabitEthernet 1/1
2	Switch 1 - Port 2	GigabitEthernet 1/2
3	Switch 1 - Port 3	GigabitEthernet 1/3
4	Switch 1 - Port 4	GigabitEthernet 1/4
5	Switch 1 - Port 5	GigabitEthernet 1/5
6	Switch 1 - Port 6	GigabitEthernet 1/6
7	Switch 1 - Port 7	GigabitEthernet 1/7

4.21.94 show snmp security-to-group

Command:

```
show snmp security-to-group [ { v1 | v2c | v3 } <security_name> ]
```

show Show running system information

snmp Display SNMP configurations

security-to-group security-to-group configuration

v1 v1 security model

v2c v2c security model

v3 v3 security model

<SecurityName : word32> security group name

Default:

N/A

Usage Guide:

To display the **SNMP Group** information.

Example:

To display the **SNMP Group** information**.**

```
Switch # show snmp security-to-group
Security Model : v1
Security Name    : public
Group Name       : default_ro_group
```

```
Security Model : v1
Security Name    : private
Group Name       : default_rw_group

Security Model : v2c
Security Name    : public
Group Name       : default_ro_group

Security Model : v2c
Security Name    : private
Group Name       : default_rw_group

Security Model : v3
Security Name    : default_user
Group Name       : default_rw_group
```

4.21.95 show snmp user

Command:

```
show snmp user [ <username> <engineID> ]
```

show Show running system information

snmp Display SNMP configurations

user User

<Username : word32> Security user name

<Engiedid : word10-32> Security Engine ID

Default:

N/A

Usage Guide:

To display the **SNMP User** information.

Example:

To display the **SNMP User** information**.**

```
Switch # show snmp user
User Name                : default_user
Engine ID                : 800007e5017f000001
```

```
Security Level                : NoAuth, NoPriv
Authentication Protocol : None
Privacy Protocol              : None
```

4.21.96 show snmp view

Command:

```
show snmp view [ <view_name> <oid_subtree> ]
```

show Show running system information

snmp Display SNMP configurations

view MIB view configuration

<ViewName : word32> MIB view name

<OidSubtree : word255> MIB view OID

Default:

N/A

Usage Guide:

To display the **SNMP viewer** information.

Example:

To display the **SNMP viewer** information**.**

```
Switch # show snmp view
View Name      : default_view
OID Subtree : .1
View Type      : included
```

4.21.97 show spanning-tree

Command:

```
show spanning-tree [ summary | active | { interface ( <port_type> [ <port_type_list> ] ) } | { detailed
[ interface ( <port_type> [ <port_type_list> ] ) ] } | { mst [ configuration | { <instance> [ interface
( <port_type> [ <port_type_list> ] ) ] } ] } ]
```

show Show running system information

spanning-tree STP Bridge

active STP active interfaces

detailed STP statistics

interface Choose port

summary STP summary

mst Configuration

configuration STP bridge instance no (0-7, CIST=0, MST1=1...)

<Instance : 0-7> Choose port

Default:

N/A

Usage Guide:

To display the **STP** information.

Example:

To display the **STP** information**.**

```
Switch # show spanning-tree
CIST Bridge STP Status
Bridge ID       : 32768.00-30-4F-00-99-00
Root ID         : 32768. 00-30-4F-00-99-00
Root Port       : -
Root PathCost: 0
Regional Root: 32768. 00-30-4F-00-99-00
Int. PathCost: 0
Max Hops        : 20
TC Flag         : Steady
TC Count        : 0
TC Last         : -
Port          Port Role          State          Pri   PathCost   Edge   P2P   Uptime
---------  --------------  ----------  ---  --------  ----  ---  -------------
```

4.21.98 show switchport forbidden

Command:

```
show switchport forbidden [ { vlan <vid> } | { name <name> } ]
```

show Show running system information

switchport Display switching mode characteristics

forbidden Lookup VLAN Forbidden port entry

name name - Show forbidden access for specific VLAN name

vlan vid - Show forbidden access for specific VLAN id

Default:

N/A

Usage Guide:

To display the **VLAN Forbidden** port entry.

Example:

To display the **VLAN Forbidden** port entry**.**

```
Switch # show switchport forbidden
VID     Interfaces
----    ----------
 2       1
```

4.21.99 show tacacs-server

Command:

```
show tacacs-server
```

show Show running system information

tacacs-server TACACS+ configuration

Default:

N/A

Usage Guide:

To display the **TACACS+ Server** configuration.

Example:

To display the **TACACS+ Server** configuration**.**

```
Switch # show tacacs-server
Global TACACS+ Server Timeout          : 5 seconds
Global TACACS+ Server Deadtime         : 0 minutes
Global TACACS+ Server Key              :
No hosts configured!
```

4.21.100 show terminal

Command:

show terminal

show Show running system information

terminal Display terminal configuration parameters

Default:

N/A

Usage Guide:

To display the your login information.

Example:

To display the your login information**.**

Switch # **show terminal**
Line is con 0.
* You are at this line now.
Alive from Console.
Default privileged level is 2.
Command line editing is enabled
Display EXEC banner is enabled.
Display Day banner is enabled.
Terminal width is 80.
length is 24.
history size is 32.
exec-timeout is 10 min 0 second.
Current session privilege is 15.
Elapsed time is 0 day 1 hour 12 min 15 sec.
Idle time is 0 day 0 hour 0 min 0 sec.

4.21.101 show upnp

Command:

show upnp

show Show running system information

upnp Display UPnP configurations

Default:

N/A

Usage Guide:

To display the **UPnP** information.

Example:

To display the **UPnP** information**.**

```
Switch # show upnp
UPnP Mode                       : Disabled
UPnP TTL                        : 4
UPnP Advertising Duration : 100
```

4.21.102 show users

Command:

```
show users [ myself ]
```

show Show running system information

users Display information about terminal lines

myself Display information about mine

Default:

N/A

Usage Guide:

To display the user status.

Example:

To display the user status for all.

```
Switch # show users
Line is con 0.
* You are at this line now.
Connection is from Console.
User name is admin.
Privilege is 15.
Elapsed time is 0 day 1 hour 20 min 49 sec.
```

```
Idle time is 0 day 0 hour 0 min 0 sec.

Line is vty 0.
Connection is from 192.168.0.45:49527 by Telnet.
User name is admin.
Privilege is 15.
Elapsed time is 0 day 0 hour 8 min 46 sec.
Idle time is 0 day 0 hour 8 min 42 sec.
```

4.21.103 show version

Command:

```
show version
```

show Show running system information

version System hardware and software status

Default:

N/A

Usage Guide:

To display the **software and system** information.

Example:

To display the **software and system** information**.**

```
Switch # show version

MAC Address          : 00-30-4f-00-99-00
System Contact       :

Date                    : 2013-10-02T15:15:04+02:00

                Product             : fs Best Switch
                Software Version : 000
Build Date          : 2013-12-06T15:22:03+01:00
```

4.21.104 show vlan

Command:

```
show vlan [ id <vlan_list> | name <name> | brief ]
```

show Show running system information

vlan VLAN status

id VLAN status by VLAN id

name VLAN status by VLAN name

brief VLAN summary information

Default:

N/A

Usage Guide:

To display the **VLAN** information.

Example:

To display the **VLAN** information**.**

```
                    Switch # show vlan
VLAN    Name                                Interfaces
----    --------------------------------    ----------
1       default                             Gi 1/1-25 10G 1/1-4
```

4.21.105 show vlan ip-subnet

Command:

show vlan ip-subnet [id <subnet_id>]

show Show running system information

vlan VLAN status

ip-subnet Show VLAN ip-subnet entries

id Show a specific ip-subnet entry

Default:

N/A

Usage Guide:

To display the **IP-based VLAN** information.

Example:

To display the **IP-based VLAN** information**.**

Switch # **show vlan ip-subnet**

VCE ID	IP Address	Mask Length	VID	Interfaces
1	192.168.78.0	24	5	GigabitEthernet 1/1

4.21.106 show vlan mac

Command:

show vlan mac [address <mac_addr>]

show Show running system information

vlan VLAN status

mac Show VLAN MAC entries

address Show a specific MAC entry

Default:

N/A

Usage Guide:

To display the **MAC-based VLAN** information.

Example:

To display the **MAC-based VLAN** information**.**

```
Switch # show vlan mac
MAC Address          VID    Interfaces
-----------          ---    ----------
00-40-55-00-00-00    1      GigabitEthernet 1/1
```

4.21.107 show vlan protocol

Command:

```
show vlan protocol [ eth2 { <etype> | arp | ip | ipx | at } ] [ snap { <oui> | rfc-1042 | snap-8021h }
<pid> ] [ llc <dsap> <ssap> ]
```

show Show running system information

vlan VLAN status

protocol Protocol-based VLAN status

eth2 Ethernet protocol based VLAN status

<etype> Ether Type(Range: 0x600 - 0xFFFF)

arp Ether Type is ARP

at Ether Type is AppleTalk

ip Ether Type is IP

ipx Ether Type is IPX

llc LLC-based VLAN status

<dsap> DSAP (Range: 0x00 - 0xFF)

<ssap> SSAP (Range: 0x00 - 0xFF)

snap SNAP-based VLAN status

<oui> SNAP OUI (Range 0x000000 - 0XFFFFFF)

rfc-1042 SNAP OUI is rfc-1042

snap-8021h SNAP OUI is 8021h

<pid> PID (Range: 0x0 - 0xFFFF)

Default:

N/A

Usage Guide:

To display the **Protocol-based VLAN** information.

Example:

To display the **Protocol-based VLAN** information**.**

```
Switch # show vlan protocol
```

```
Protocol Type    Protocol (Value)              Group ID
-------------    ------------------------      --------
LLC_SNAP         OUI-00:e0:2b; PID:0x1         q

                        Switch 1
                        ---------
Group ID                VID     Ports
----------------        ----    -----
q                       2       GigabitEthernet 1/1
```

4.21.108 show voice vlan

Command:

```
show voice vlan [ oui <oui> | interface ( <port_type> [ <port_list> ] ) ]
```

show Show running system information

voice Voice appliance attributes

vlan Vlan for voice traffic

interface Select an interface to configure

oui OUI configuration

<oui> OUI value

Default:

N/A

Usage Guide:

To display the **Voice VLAN** information.

Example:

To display the **Voice VLAN** information for **GigabitEthernet 1/1**

```
Switch # show voice vlan interface GigabitEthernet 1/1

GigabitEthernet 1/1 :
---------------------
GigabitEthernet 1/1 switchport voice vlan mode is auto
GigabitEthernet 1/1 switchport voice security is disabled
GigabitEthernet 1/1 switchport voice discovery protocol is oui
```

4.21.109 show web privilege group

Command:

show web privilege group [<group_name>] level

show Show running system information

web Web

privilege Web privilege

group Web privilege group

<group_name> Valid words are 'Aggregation' 'DHCP' 'Debug' 'Dhcp_Client' 'Diagnostics' 'EPS' 'ERPS' 'ETH_LINK_OAM' 'EVC' 'Green_Ethernet' 'IP2' 'IPMC_Snooping' 'LACP' 'LLDP' 'Loop_Protect' 'MAC_Table' 'MEP' 'MVR' 'Maintenance' 'Mirroring' 'NTP' 'POE' 'PTP' 'Ports' 'Private_VLANs' 'QoS' 'RPC' 'Security' 'Spanning_Tree' 'System' 'Timer' 'UPnP' 'VCL' 'VLAN_Translation' 'VLANs' 'Voice_VLAN' 'XXRP' 'ZL_3034X_API'

level Web privilege group level

Default:

N/A

Usage Guide:

To display the **Web privilege group**.

Example:

To display the **Web privilege group**

Switch # **show web privilege group level**

Group Name	Privilege Level

4.22 terminal

4.22.1 terminal editing

Command:

terminal editing

terminal **Set** terminal line parameters

editing Enable command line editing

Default:

Enabled

Usage Guide:

To enable editing mode for current terminal session.

Example:

To enable editing mode for current terminal session.

Switch # **terminal editing**

4.22.2 terminal exec-timeout

Command:

terminal exec-timeout <min> [<sec>]

terminal Set terminal line parameters

exec-timeout Set the EXEC timeout

<min> Timeout in minutes

<sec> Timeout in seconds

Default:

N/A

Usage Guide:

To configure idle timeout of EXEC mode for current terminal session.

Example:

To configure idle timeout with 500 minutes of EXEC mode for current terminal session.

Switch # **terminal exec-timeout 500**

4.22.3 terminal history size

Command:

terminal history size <history_size>

terminal Set terminal line parameters

history Control the command history function

size Set history buffer size

<history_size> Number of history commands, 0 means disable

Default:

N/A

Usage Guide:

To configure history buffer side for current terminal session.

Example:

To configure history buffer side with 20 lines for current terminal session.

```
Switch # terminal history size 20
```

4.22.4 terminal length

Command:

```
terminal length <lines>
```

terminal Set terminal line parameters

length Set number of lines on a screen

<lines: 0 or 3-512> Number of lines on screen (0 for no pausing)

Default:

N/A

Usage Guide:

To configure length of command display for current terminal session.

Example:

To configure length of command display with 5 lines for current terminal session.

```
Switch # terminal length 5
Switch # show run
Building configuration...
username admin privilege 15 password none
loop-protect
-- more --, next page: Space, continue: g, quit: ^C
```

4.22.5 terminal width

Command:

```
terminal width <lines>
```

terminal Set terminal line parameters

width Set width of the display terminal

<lines:0 or 40-512> Number of characters on a screen line (0 for unlimited width)

Default:

N/A

Usage Guide:

To configure width of command display for current terminal session.

Example:

To configure width of command display with 40 characters per line for current terminal session.

```
Switch # terminal width 40
```
